BUREAU OF CHEMICAL ABSTRACTS

B.—APPLIED CHEMISTRY

THE SOCIETY OF CHEMICAL INDUSTRY

LIST OF PAPERS PRESENTED TO THE SOCIETY & PUBLISHED IN THE TRANSACTIONS DURING 1924

N.B.—The words within ( ) indicate the Section or Group of the Society (if any) before which the paper was read and the issue of the Journal in which it appears.

PAGE

Allan, J. *See* Armstrong, E. F. 207T

Ames, W. M. Use of diphenylguanidine as an accelerator of vulcanisation (April 25) 117T

Armstrong, E. F., and J. Allan. A neglected chapter in chemistry: the fats. Presidential address. (Annual Meeting, July 11) 207T

[illegible] solutions. [illegible] .. .. [illegible]

[illegible], G. Note on the [illegible] viscosimeter. (Feb. 15) 29T

Barrs, O. E. Determination of cadmium in spelter and zinc ores. (London, Jan. 7) 7T

Bishop, W. B. S. Preparation of ethyl ether by Williamson's method. (Feb. 1) 23T
Errata 148T

Blair, E. W., T. S. Wheeler, and W. Ledbury. Action of ozone on hydrocarbons, with special reference to the production of formaldehyde. III. Action of ozone on *n*-hexane. (Sept. 5) 287T
Note on the action of bromine on *n*-hexane. (Sept. 5) 289T

Bowen, A. R. *See* Morgan, G. T. 346T

Brooks, F. T. Moulds on frozen meats. (Oct. 3) .. 306T

Broome, D. C. Further notes on the consistency of road tars. (Feb. 8) 25T

Brown, M. A. W. *See* Haddon, C. L. 41T

Budgen, N. F. Mechanical properties of aluminium-zinc alloys containing cadmium. (Aug. 15) .. 273T
Properties of fusible alloys. (July 4) 200T

Callan, T. Use of the lead cathode in the electrolytic method for the determination of minute quantities of arsenic. (Manchester, May 30) 168T
and N. Strafford. Analysis of organic rubber vulcanising accelerators. (Manchester—Joint meeting with Manchester Section of Institution of Rubber Industry, Jan. 4) 1T

Campbell, F. H. Rate of disappearance of sulphites in raw meat. (Sydney, Sept. 26) 297T

Carr, F. H. Insulin and its manufacture. (Annual Meeting, July 18) 228T

Coad-Pryor, E. A. Note on the action of potassium carbonate on lead glass. (Feb. 8) 27T

Coates, W. S. Utilisation of low-grade and waste coals in power production. (Newcastle, May 23) 157T

[illegible]er, E. Ashley. *See* Morgan, G. T. .. 304T, 352T

[illegible], F. J. *See* Morgan, G. T. 304T

[illegible]rd, K. H. *See* Drummond, J. C. 236T

[illegible]k, J. Mechanism of the oxidation of typical carbohydrates with hydrogen peroxide and hypochlorous acid. (June 6) 171T

Cross, C. F., and A. Engelstad. Action of aqueous sulphurous acid on lignocellulose. (Aug. 1) .. 253T

Gray, T. B. Some properties of soft soldered joints. (Mar. 21 and 28) 65T, 69T

Davey, W. S. *See* Martin, G. 31T

De Vries, O. Tensile strength of rubber. (Mar. 7) .. 47T

Dodd, A. H. Analysis of lysol. (April 11) 93T

Donovan, W., and T. E. Perks. Corrosion of Muntz metal in sea water. (Mar. 28) 72T

Dorée, C., and L. Hall. Lignosulphonic acid obtained by the action of sulphurous acid on spruce wood. (Aug. 1) 257T

Drakeley, T. J., and J. R. I. Hepburn. Specific gravity and ash content of coal. (Aug. 22) .. 277T
Volatile matter and ash contents of samples of coal from same seam. (May 2) 134T
and A. Zeitlin and L. H. Williams. Note on the accelerating influence of an azo dye in vulcanisation. (July 18) 238T

Drape, H. D. H. Design and operation of gas scrubbing towers. (Nov. 21) 329T

Driver, J. E. α-Naphtholaurin. Method for detecting small quantities of α-naphthol in the presence of β-naphthol. (July 4) 206T

Drummond, A. A. Viscosity of syrupy condensation products of phenol and formaldehyde. (Nov. 7) 323T
Erratum 328T

Drummond, J. C., S. S. Zilva, and K. H. Coward. Influence of storage and of emulsification on the vitamins in cod liver oil. (July 18) 236T
[illegible] preservation of food by sterilisation. (Feb. 1) 17T

PAGE

Dunstan, A. E., F. B. Thole, and F. G. P. Remfry. Bauxite as a refining agent for petroleum distillation. (London, June 13) 17T

Edwards, K. B. Comparative study of some coal tars produced by low-temperature carbonisation. (May 9 and 16) .. .. 143T, 14?

Engelstad, A. See Cross, C. F. .. .. 25?

Evans, U. R. Action of salt solutions on iron and steel in the presence of oxygen. (Oct. 31) .. 315
Corrosion of copper and copper alloys. (May 2) .. 127

Foran, H. P. Contraction of alcohol on dilution. (Nov. 21) .. .. 33?

Forster, R. B., and C. M. Keyworth. Arylamine salts of the naphthalenesulphonic acids. I. The salts of 2.6- and 2.7-naphthalenedisulphonic acids. (May 30) 165T
Arylamine salts of the naphthalenesulphonic acids. II. Salts of α- and β-naphthalenesulphonic acids. (Oct. 3) 299T
Errata 314T
See Keyworth, C. M. 203T

Fyleman, E. Determination of acetic and butyric acids. (London, May 9) 142T

Galo, R. Q. Note on "temper" colours. (Dec. 12).. 349T

Gardner, R. Essential oil of manuka (*Leptospermum scoparium*). (Feb. 22) 34T

Graham, J. I. Spontaneous combustion of coal. (Birmingham, April 4) 79T
Errata 112T

Greenfield, G. J. Modification of the Grosvenor humidity chart. (Jan. 11) 9T

Greenwood, H. D. Examination of the banded constituents of a Derbyshire coal. (Dec. 26) .. 3?

Gupta, D. N., H. D. Son, and E. R. Watson. Cause of the low yield of alcohol on fermentation of molasses. (Sept. 19) .. .. 291?

Haddon, C. L., and M. A. W. Brown. Calcium sulphate cement. (Newcastle, Jan. 18) 11T

Hall, L. See Dorée, C. 257T

Hawkins, C. S. L. See Price, N. J. 113T

Heilbron, I. M. Plant pigments. (Liverpool and Manchester—joint meeting, April 11) 89T

Hepburn, J. R. I. See Drakeley, T. J. .. 134T, 277T

Hickinbottom, W. J. See Morgan, G. T. 307T

Hothersall, A. W. Determination of vanadium by reduction with hydrogen peroxide and titration with potassium permanganate. (Aug. 8) .. 270T

Hume, J. A modified thermo-regulator. (July 25).. 250T

Jones, O. Technology of canning. (Bristol, May 9) 139T

Kemp, C. Norman. The X-ray analysis of coal, and a new X-ray examining unit. (Annual Meeting, July 18) 234T

Keyworth, C. M. Arylamine salts of some sulphonic acids of the benzene series. I. Benzenemonosulphonic acid. (Nov. 28) 341T
and R. B. Forster. Removal of gummy, oily, and waxy matters from raw cane sugar. (July 4) .. 203T
See Forster, R. B. 165T, 299T

Knapp, A. W., and R. V. Wadsworth. Distribution of theobromine during the fermentation of cacao. (Birmingham, Apr. 25) 124T

Knecht, E., and E. F. Muller. Dehydration of alcohol by means of glycerin. (Manchester, June 6) 177T

Ledbury, W. See Blair, E. W. 287T, 289T

Leverhulme, Viscount. Science, religion, and workshop. Second Messel Memorial Lecture. (Annual Meeting, July 25) 242T

Lidstone, F. M. Mercurial viscosimeter compensated for density. (April 4) 87T

Lush, E. J. Kinetics of hydrogenation. (Birmingham, Mar. 14) 53T

McClelland, N. The acids of camel hump fat. (May 23) 164T

McDavid, J. W. Vapour pressures of fuming sulphuric acid, and their application to the problem of the absorption of sulphur trioxide. (Mar. 21) 57T

Martin, G., and W. S. Davey. Determination of the activity of an accelerator of vulcanisation. (Manchester—Joint meeting with Manchester Section of Institution of Rubber Industry, Feb. 22) 31T

Miller, J. Detection of persulphate in flour, and a recent bleaching agent for flour. (Manchester, July 18) 239T

Morgan, G. T., and A. R. Bowen. Observations on the higher fatty acids. (Birmingham, Dec. 5) .. 346T
and E. Ashley Cooper. Bactericidal action of quinones and allied compounds. (Dec. 12) .. 352T
and E. Ashley Cooper and F. J. Corby. Bactericidal action of tellurium-β-di-ketones. (Oct. 3).. 304T
and W. J. Hickinbottom. Nitration of stereoisomeric aromatic diamines. (Oct. 17) 307T
and J. D. Main Smith. Separation of cobalt from nickeliferous ores by the purpureo-cobalt chloride process. (Birmingham, May 2) 131T
and H. M. Stanley. Studies in the acenaphthene series. I. 4-Aminoacenaphthene. (Birmingham, Dec. 5) 343T

Morrell, R. S. Polymerisation of drying oils. (Dec. 19) 362T

Moudgill, K. L. Travancore essential oils. I. Oil from the seeds of *Elattaria cardamomum* (cardamoms). (May 2) 137T
Travancore essential oils. II. Oil from the leaves of *Calamintha umbrosa*, Benth. (May 23) .. 163T

..dany, H. M., and E. R. Watson. Aromatic hydrocarbons in Burmah petroleums. (Oct. 17) .. 310T

..llor, E. F. See Knecht, E. 177T

..man, R. K. Determination of water in mixtures of ether, alcohol, and water. (Sydney, Sept. 5).. 285T

..rion, A. M. Technical use of bauxite in connexion with petroleum refining. (London, June 13) .. 188T

..ker, L. H. See Partington, J. R. 52T

..ngton, J. R., and L. H. Parker. Theory of absorption towers.—A correction. (Mar. 7) .. 52T

..rson, T. S. Dyeing properties of some Scottish lichens, and of a few other materials. (June 13) 189T
..difications in laboratory apparatus. (Glasgow, ..ug. 29) 281T

..r T. E. Corrosive action of brackish waters on metals. (Mar. 28) 75T
..Donovan, W. 72T

Pow, W. J., and H. Whittaker. Determination of ..ntosans in wood cellulose. (Feb. 22) 35T

Pric.. J., and C. S. L. Hawkins. New determina..n of the specific gravities of solutions of ..monia. (Birmingham, Apr. 25) 113T

Reev.. H. Gordon. Determination of phosgene ..(g. 22) .. .. 2??T

Rem.. F. G. P. See Dunstan, A. E. 179T

Ro.. K. C. Preparation of ethyl acetate and ethyl ..acetate. (Sept. 26) 295T

Rob..n, J. B. The reciprocal salt-pair $Na_2Cr_2O_7 + ..\rightleftarrows K_2Cr_2O_7 + 2NaCl$. (Nov. 21) 334T

Russ.. P. See Whitman, W. G. 193T, 197T

Sen, .. See Gupta, D. N. 291T

Smith, D. Main. See Morgan, G. T. 131T

Sokal.. Catalysis and the internal-combustion e.. (American, Aug. 29) 283T

Spiers, H. Analysis of commercial butyl alcohol. (J..) 251T

	PAGE
Stanley, H. M. *See* Morgan, G. T.	343T
Stephens, O. C. Preparation of cyanoacetic ester (ethyl cyanoacetate). (Oct. 17 and Nov. 14)	313T, 327T
Strafford, N. *See* Callan, T.	1T
Sutton, R. W. *See* Trotman, S. R.	190T
Thole, F. B. *See* Dunstan, A. E.	179T
Thompson, F. C., and N. Tilling. Desulphurisation of iron pyrites. (Feb. 29)	37T
Tilling, N. *See* Thompson, F. C.	37T
Travers, M. W. Critical study of the published results of tests of water-gas plant. (Institution of Chemical Engineers, Dec. 19)	355
Trotman, S. R. Note on the bleaching action of hypochlorous acid. (July 18)	240
and R. W. Sutton. Influence of micro-organisms in the weathering of wool and cotton. (June 13)	19
and C. R. Wycho. Amino-nitrogen of wool in relation to chlorination. (Sept. 26)	29
Vogel, J. L. F. Notes on alloy metals used in alloy steels. (Liverpool, Dec. 26)	3
Wadsworth, R. V. *See* Knapp, A. W.	1

	PAGE
Wa E. R. *See* Gupta, D. N.	291T
ulany, H. M.	310T
eer, T. S. *See* Blair, E. W.	287T, 289T
iston, J. R. H. Preparation of 4-chloro-6-nitro-*m*-anisidine. (Dec. 26)	370T
Preparation of isodiphenetidine. (Dec. 26) ..	369T
Preparation of naphthalic acid by oxidation of acenaphthaquinone. (Dec. 26)	370T
hitman, W. G., and D. P. Russell. Submerged corrosion of iron. (American, June 27 and July 4)	193T, 197T
Whittaker, H. *See* Powell, W. J.	35T
Willey, E. J. B. Apparatus for the accurate volumetric determination of tin in canned foods. (Mar. 28)	70T
Mode of retention of nitrogen in electric arc-weld metal. (Aug. 1 and Aug. 8)	263T, 267T
Williams, E. C. Silica gel as an industrial adsorbent. (Chemical Engineering Group, April 18)	97T
Williams, L. H. *See* Drakeley, T. J.	238T
Wyche, C. R. *See* Trotman, S. R.	293T
Zeitlin, A. *See* Drakeley, T. J.	238T
Zilva, S. S. *See* Drummond, J. C.	236T

TRANSACTIONS AND ABSTRACTS (B).

Vol. XLII. 1924

Name Index

N.B.—The Society's Transactions and the Abstracts are paged separately and are indicated by the letter T *following and the letter* B *preceding, respectively, the number of the page. The letter* (P) *indicates that the paper referred to is a patent.*

An asterisk appended to the number of a page indicates that the title only of an article is given, or in the case of patents, either the title only or the title and a reference to a previous patent.

A

PAGE

Aall, N. H. Nickel steel; Softening of a martensitic —— B871
Steel; Displacement of the pearlite eutectic-point in —— by nickel and chromium B336
Aamodt, O. S. *See* Stakman, E. C. B646
Abad, J. M. Carburetted air; Production of —— for use in internal-combustion engines (P) B164, B327*
Abbott, W. E. *See* Becker, H. G. B112
Abbott Laboratories. *See* Volwiler, E. H. B200, B233
Abderhalden, E. Fermentation and multiplication of yeast cells; Influence of products obtained from yeast and of other substances on course of —— B146
Fermentation of various carbohydrates; Influence of adsorbents on —— B148
Goose feathers; Products of the catalytic hydrolysis of —— .. B1026
Proteins; Partial hydrolysis of —— B148
Silk; Composition of spinning —— B127
and E. Komm. Protein molecule; Structure of the —— B611, B611, B729
Proteins; Anhydride structure of —— B925
and A. Moschini. Popypeptides composed of amino-acids other than those resulting from hydrolysis of proteins; Fission of —— by enzymes B227
and E. Schwab. Silk fibroin; Anhydride structure of —— .. B903
and H. Sickel. Casein; Isolation of an amino-acid of the indole group from —— B763
and W. Stix. Proteins; Structure of —— B852
Abe, K. *See* Murayama, Y. B33, B731
Abeele, V. Palm oil; Manufacture of —— B564
Abel, J. J., and E. M. K. Geiling. Peptone; Properties of the constituents of Witte's —— B488
Abelmann, A. *See* Rosenthaler, L. B74
Abraham, C. E. Rust-proofing process and compound (P) B562
Abram, H. H. Stainless steels B425
Abrams, D. A. Cement; Effect of storage of —— B675
Concrete; Impure waters for mixing —— B982
Abrasive Co. *See* Brockbank, C. J. B515
Abrihat. *See* Richard, A. B77
Ach, L. *See* Boehringer, C. F., und Söhne B355, B355
Acheson, G. W., and Acheson Corp. Rubber composition and process of making it (P) B343
Acheson Corp. *See* Acheson, G. W. B343
Ackermann, S. E. Clay; Physical properties of —— B175
Ackermann, W. *See* Heuser, E. B464, B553
Acklin, O. Lactic acid fermentation of dextrose by peptone; Rôle of bacteria in —— B28, B69
Acme Artificial Silk Co. *See* Huttinger, C. A. B784
Acme White Lead and Color Works. *See* Schumacher, J. W. .. B343
Actien-Ges. *See* Akt.-Ges.
Adam, D. B. *See* Brittlebank, C. C. B484
Adam, H. R. Gold crystals; Preparation of —— B716
See Stanley, G. H. B177
Adam, M. A. *See* Davies, H. B180
Adam, W. *See* Shannon, W. B462
Adami. Annual Meeting proceedings 219T
Adams, C. F. Electrolytic gas cell (P) B22

PAGE

lams, F. W. Bismuth citrate; Composition of —— and its reaction with alkalis B807
See Corfield, C. E. B807
Aams, H. R. Sulphur; Effects of —— on crops and soils B990
Aams, H. S., and Naugatuck Chemical Co. *n*-Butoxylthiocarbonic acid disulphide; Process of making —— (P) B577
See Naugatuck Chemical Co. B768
d *See* Shepard, M. G. B35, B1020
ms, J. H., and Texas Co. Oils; Conversion and transformation of —— (P) B124, B1005
us, W. H., and General Electric Co. Bearing metal (P) B221
ms, R., and J. R. Johnson. Trypanocidal action; Compound having a —— (P) B890
l I. Levine. Hydroxy-aldehydes; Simplification of Gattermann synthesis of —— B199
ee Bauer, W. W. B847
ee Brode, W. R. B861
e Carothers, W. H. B730
e Gardner, J. H. B198
ee Graves, G. D. B198
ee Jacobson, R. A. B574
ee Kaufmann, W. E. B152
e Noller, C. R. B847
e Shriner, R. L. B730
e Tomecko, C. G. B191
e Volwiler, E. H. B200
Adc , B. *See* Norris, H. F. J. B200
Add y, A. Cotton; Physical causes of lustre in —— B506
Adk H., and W. A. Lazier. Organic reactions at the surfaces of dehydrogenating catalysts B996
and others. Diphenols from resorcinol and substituted diphenic anhydrides B823
Adler *See* Berlin, H. B552
Adow A. N. *See* Smorodinzev, J. A. B610
Aero P eriser Co. Coal or other fuel; Pulverising —— and feeding t for combustion (P) B818
Africa, A. *See* Roxas, M. L. B920
A. F. Silicate. *See* Mazza, E. N. B855*
Agafono A., and W. Vernadsky. Kaolin; Product of the dehydration of —— B422
Agde, G. and F. Recke. Coke; Structure and combustibility of —— B4
Aggeew, *See* Powarnin, G. B759
Agopian, A. Vitamins; Process for obtaining —— (P) B612
Agricultu Developments Co. (Pyrford), Ltd. *See* Richards, E. H. B801
Agathe, C. Emulsions, suspensions, and similar disperse systems; Continuous production of —— (P) B239
Aguillon, J. Benzol contained in coal gas; Recovering the —— (P) B286
Ahlmann-Olsen, J. U. Diatomaceous earth and the like; Producing impermeable, strong, and acid-proof tubes, bricks and other articles from —— (P) B713
Ahlum, C. C. *See* Du Pont de Nemours and Co., E. I. B698
Ahrndts, T. *See* Fricke, R. B745
Ailhaud, F. Liquids; Apparatus for sterilising —— by means of ultra-violet rays (P) B614
L'Air Liquide, Soc. Anon. pour l'Etude et l'Exploit. des Proc. G. Claude. Air; Separation of the constituents of ——, and production of argon (P) B879

PAGE

L'Air Liquide—*continued.*
Gaseous mixtures, *e.g.* air; Separation of —— (P) B712
Gaseous mixtures containing hydrogen; Separation of constituents of —— (P) B123
Gases; Preliminary treatment or purification of illuminating or coal gases or coke-oven —— intended for the recovery of hydrogen by partial liquefaction (P) B123, B860
See Claude, G. B335*, B380*, B468*, B665, B747*, B933*
Air Reduction Co. *See* Van Nuys, C. C. B388, B698
Aische, M. I. Soaps; Manufacture of solvent —— from sulphonated oils (P) B565
Sulphonated oils of animal origin; Production of soluble —— (P) B140
Aitchison, L., and G. R. Woodvine. Steels; Changes of volume of —— during heat treatment B833
See Dyson, W. H. B222*
Aitken, H. W. Sugar cane; Crushing —— (P) B191*
Aiyar, S. S. *See* Heuser, E. B168
Ajax Electrothermic Corp., and E. F. Northrup. Furnaces; Electric induction —— and other apparatus heated by induction (P) B794
Akamatsu, S. Galactose-sulphuric acid B27
Glycerophosphatase; Occurrence of —— in taka-diastase B28
Lecithin; Hydrolysis of —— by taka-diastase B28
Phytochemical reduction in the cyclohexane series B28
Aktiebolaget Cellulosa. *See* Rinman, E. L. B374*
Aktiebolaget Ferrolegeringar. Alloys poor in carbon and silicon; Production of —— (P) B752
See Kalling, B. M. S. B182*, B339, B523*, B876*
Aktiebolaget Kväfveindustri. *See* Thorssell, C. T. B422*
Aktiebolaget Separator. Centrifugally treated liquid; Method to prevent injurious reaction between —— and the atmospheric air (P) B929
Separating one or more substances from other substances (P) B117
Separators; Centrifugal —— (P) B81, B282
Separators; Centrifugal —— for liquids (P) B736
Separators; Centrifugal —— for oil and water (P) B9
Aktiebolaget Zander & Ingeström. *See under* Zander
Akt.-Ges. für Anilin-Fabr. Alkaline-earth sulphates or magnesium sulphate; Kilns for calcining —— (P) B17
4-Allyloxyphenylmalonamic acid and its esters; Preparation of —— (P) B810
Animal fibres; Protecting —— during treatment with alkaline solutions (P) B333
Arylcyclohexylamines; Preparation of —— (P) B449
Azine derivatives; Preparation of —— (P) B825
Charcoal; Manufacture of —— (P) B501
Diarylthioureas; Preparation of —— (P) B769
Dyeing wool with dyestuffs capable of being chromed (P) B939*
Dyestuffs; Preparation of —— (P) B370
Dyestuffs of the Safranine series for wool (P) B936
Germicide (P) B728
Hydrogenated aromatic hydrocarbons; Production of —— and their substitution products (P) B578
Secondary amines; Preparation of —— from the corresponding N-nitroso-derivatives and their nuclear substitution products (P) B355
Sulphur and sulphur dioxide; Production of —— from calcium sulphate (P) B311
Tetrakisazo dyestuffs; Manufacture of —— (P) B126, B595*, B741*
Thioindigo and its nuclear substitution derivatives; Preparation of —— (P) B414
Akt.-Ges. der Anilinfarben und Chemikalien-fabr., and K. Dziewónski. Vat dyestuff; Production of a —— (P) B329
A.-G. für Bergbau, Blei- und Zinkfabr. zu Stolberg u. in Westfalen. Zinc blende and similar ores and products containing sulphides; Desulphurising —— (P) B679
A.-G. für Brennstoffvergasung. Ammonia; Production of —— from carbonised fuels (P) B124*
Akt.-Ges. der Chem. Produkten-Fabr. Pommerensdorf, and G. Schüler. Sodium sulphate; Manufacture of —— (P) B788
Akt.-Ges. Lignose. *See* Thomas, F. B618
Akt.-Ges. der Maschinenfabr. Escher, Wyss und Co. *See under* Escher.
Aktieselskabet Hydropeat. *See* Brünig, V. B95*
A./S. Cellulosepatenter. *See* Morterud, E. B213
A./S. Dansk Svovlsyre & Super-Phosphat-Fabrik, and Dansk Aktieselskab Siemens Schuckert. Sulphuric acid; Automatic regulation of the supply of oxidising agents in manufacture of —— (P) B597*
A./S. Krystal. Precipitation of several substances from a solution (P) B584
A./S. de Norske Saltverker. Solutions; Production of coarse precipitates from —— (P) B205, B321
See Bull, H. B712*
See Isaachsen, I. B83*
Albert, A., and Roessler and Hasslacher Chemical Co. Arsenic compounds; Production of organic —— (P) B77
Albert, H. *See* Kühl, H. B96
Albert, Chem. Fabr. K. Resins; Determination of colour and darkening of artificial —— B303
Resins; Preparation of artificial —— (P) B797
Viscosimeter for determining viscosity of resin solutions and the like B454
Alberti, H. Benzol; Testing —— by titration with bromine B675
Albrecht, F. *See* Lüers, H. B958
Albus, W. R. *See* Whittier, E. O. B560
Alco Deo Co. *See* Hoffman, A. F. B115
Alcock, H. E., and B. Laporte, Ltd. Phosphoric acid; Manufacture of —— (P) B944*
See Laporte, B., Ltd. B596
Alcock, H. J. *See* Friend, J. N. B525, B754
Aldridge and Ranken, Ltd. *See* Ashley, T. J. B704
Alexander, H. H., and American Smelting and Refining Co. Iron-tin alloy; Process of forming —— (P) B429
Tin; Electrolytic refining of —— (P) B429
Tin; Process of recovering —— (P) B429
Tin; Recovering occluded —— from slags (P) B429
Tin smelter and method of producing it (P) B429
Alexander, J. W. Motor spirit (P) B210
Alexander, P. S., and A. E. Miller. Oil-bearing materials; Apparatus for the destructive distillation of —— (P) B703

Badger, R. M. Hydrogen cyanide; Ammonia-carbon-hydrogen cyanide-hydrogen equilibrium, and free energy of —— .. B940
Badger, W. L. See Pridgeon, L. A. .. B541
Badische Anilin- und Soda-Fabr. Alcohols; Production of —— from aldehydes (P) .. B537
Alkali nitrates; Production of —— (P) .. B421, B909
Alkali nitrates; Production of —— from alkali chlorides (P) B467, B633, B633, B747
Alkaline liquors and molten alkalis; Electrolysis of —— (P) .. B747
Alkaline-earth formates; Production of —— (P) .. B537
Ammonia; Means for electrically heating gases under pressure for use in catalytic production of —— (P) .. B216
Ammonium chloride; Preparation of pure —— in the ammonia-soda process (P) .. B467, 512A
Ammonium sulphate from calcium sulphate, ammonia and carbon dioxide; Production of —— (P) .. B95
Anodes for electrolysis of alkaline liquors and alkali melts (P) .. B430
Anthraquinone derivatives containing nitrogen; Preparation of —— (P) .. B863
Carbon; Manufacture of active —— (P) .. B664
Carbon oxysulphide and carbon bisulphide; Production of —— (P) .. B870
Cellulose esters; Treatment of —— for dyeing (P) .. B251
Charcoal; Production of active —— (P) .. B409, B933
Charcoal containing sulphur; Revivifying adsorbent —— (P) .. B326
Chlorides; Protection of metallic apparatus from the action of solutions of —— (P) .. B788
Colloidal copper solutions; Preparation of —— (P) .. B279
Dibenzanthrone; Manufacture of green vat dyestuffs from —— (P) .. B862
Dibenzanthrone; Manufacture of vat dyestuffs from —— (P) B49, B369, B369, B782*
Dihydroanthracenedipyridinium dichloride; Preparation of —— (P) .. B414
Fertiliser (P) .. B437
Fertiliser; Manufacture of a non-hygroscopic —— (P) .. B306*
Fertilisers; Production of stable phosphatic —— (P) .. B485
Formic acid; Manufacture of —— (P) .. B731
Fuel gas; Manufacture of —— (P) .. B549
Gas; Purifying —— from carbon oxysulphide (P) .. B780*
Gases; Continuous removal of sulphur compounds from —— (P) .. B84, B778
Gases; Desulphurisation of —— (P) .. B1004, B1004
Gases; Production of compressed —— by electrolysis under pressure (P) .. B718
Gases; Separation of substances capable of adsorption from ——, e.g., sulphur from coal gas (P) .. B819
Glycerin substitute, and product for improving artificial resins (P) B927
Hydrocyanic acid; Catalytic production of —— (P) .. B869
Indanthrene; Manufacture of halogenated —— (P) .. B936

Badische Anilin- und Soda-Fabr.—*continued.* PAGE
Indanthrene; Production of —— (P) .. B49
Mercuric iodide; Preparation of yellow —— (P) .. B379
Mercuric iodide; Production of colloidal, yellow —— (P) B95, B633
Methane; Catalytic production of —— (P) .. B502
Methane; Production of —— from water-gas (P) .. B859
Organic compounds; Oxidation of —— (P) .. B403*
Oxalic acid; Preparation of —— (P) .. B848
Phenols; Preparation of —— which do not darken on standing (P) .. B367
Phosphates; Preparation of precipitated —— from solutions of crude phosphates containing fluorine (P) .. B760
Phosphoric esters of phenols; Preparation of pure —— (P) .. B891
Pigment colours; Preparation of —— (P) .. B392
Solutions of resins, siccatives, colours, turpentine, tar oils, perfumes, and other organic substances, except cellulose esters; Manufacture of —— (P) .. B682
Sulphur and ammonium sulphide; Recovery of —— from solutions (P) .. B294
Tanning materials; Manufacture of —— (P) .. B393, B644*
Tanning preparation easily soluble in cold water (P) .. B919
Thio-compounds; Preparation of dry —— (P) .. B402
Thymol; Preparation of —— (P) .. B402
Urea; Preparation of —— (P) .. B150
Vat colouring matters; Manufacture of —— (P) .. B824
Vat dyestuffs of the anthraquinone series; Manufacture of —— (P) .. B862
Vegetable fibres; Production of dyeings on —— (P) .. B906
Weed-killer (P) .. B437

Alkali thiosulphates; Production of —— and removing sulphur dioxide from gases (P) B334
Aluminium fluoride-alkali fluoride double compounds; Production of —— technically free from iron (P) B869
Arsenic trioxide and phosphorus pentoxide; Production of —— from arsenic-phosphorus smoke developers (P) B829
Azo dyes insoluble in water derived from acylacetyl compounds of diamines (P) B782*
Azo dyestuffs insoluble in water and process of making them (P) .. B628*

PAGE

Chem. Fabr. Griesheim-Elektron—*continued*.
Azo dyestuffs; Manufacture of —— (P) .. B248, B248, B369, B592*, B824
Azo dyestuffs; Manufacture of corinth-coloured to black —— (P) B505
Azo dyestuffs; Producing on the fibre —— from arylamides of 2.3-hydroxynaphthoic acid (P) B708
Cement masses; Production of porous —— (P) B616
Centrifuges; Washing residues in closed —— (P) B282
Chromic oxide; Production of bright green —— (P) B512
Chromite; Smelting of —— (P) B388
Fibres; Production of —— from agaves and *Yuccaceae* (P) .. B415
Magnesium alloys (P) B388, B389, B602
Magnesium or its alloys; Casting —— (P) B794*
Magnesium and its alloys; Casting —— in sand moulds (P) .. B388
Magnesium and its alloys; Colouring —— by etching (P) .. B182*
Magnesium alloys; Method of rolling —— (P) B222
Magnesium and its alloys; Protection of molten —— against oxidation (P) B793
Magnesium or its alloys; Quenching burning —— (P) B753
Magnesium and its alloys; Treating —— (P) B101*
Magnesium chloride dihydrate; Dehydration of —— (P) .. B421
Magnesium chloride dihydrate; Production of —— (P) .. B295
Magnesium; Production of —— free from silicon (P) .. B602
Magnesium-silicon alloys; Production of —— (P) B876
Manganese; Production of metallic —— by electrolysis of aqueous solutions of manganese salts (P) B523
Mixing apparatus for liquids (P) B737
Mixing apparatus; Turbine-like —— (P) B283
Organic chlorine compounds, pigments, etc.; Preparation of —— together with hydrogen chloride (P) B392
Potassium bicarbonate from potassium chloride solution; Electrolytic production of —— (P) B95*
Rotary tube furnaces; Apparatus for discharging externally heated —— (P) B239
Smoke developers; Utilisation of phosphorus-arsenic —— (P) .. B36
Sulphite-cellulose waste liquor; Preliminary treatment of —— before evaporation (P) B593
Sulphur dioxide; Separating —— from gases containing it, with simultaneous production of alkali thiosulphates (P) .. B16
Chem. Fabr. Grünau, Landshoff und Meyer. *See under* Landshoff.
Chem. Fabr. Haltingen, Jucker und Co. *See under* Jucker.
Chem. Fabr. Jühling und Co. *See under* Jühling.
Chem. Fabr. Kalk G.m.b.H. Gaseous and liquid olefines; Preparation of —— (P) B821
and H. Oehme. Coke; Production of ashless —— for metallurgical purposes (P) B408
Dinitroethyleneglycol; Preparation of —— together with other nitro-compounds from ethylene oxide (P) B452
Glycol nitrates; Production of —— from the products obtained by nitrating ethylenic hydrocarbons (P) B316
Solvent for cellulose esters, resins, oils and the like (P) .. B527
and others. Glycol nitrates; Preparation of —— from nitration products of gaseous unsaturated hydrocarbons (P) B452
Producer-gas tar; Dehydration of —— (P) B287
Tars; Treatment of —— with acids and the like (P) B589
Chem. Fabr. König, Göller, und Kreglinger. *See under* König.
Chem. Fabr. Kunheim und Co. A.-G. *See under* Kunheim.
Chem. Fabr. L. Meyer. *See under* Meyer.
Chem. Fabr. "Norgine" V. Stein. *See under* Stein.
Chem. Fabr. Pharma, G.m.b.H. Written or printed matter, drawings and the like; Reproduction of —— (P) B375
Chem. Fabr. vorm. Sandoz. Cardiac glucoside of *Bulbus scillae*; Manufacture of the —— (P) B692, B997
Hexamethylenetetramine; Therapeutically valuable compound of —— (P) B655*
Chem. Fabr. Teterow A.-G., and W. Siegel. Ammonium chloride; Preparation of sublimed —— (P) B633
Chem. Fabr. Titania G.m.b.H. Carbonic acid baths; Production of —— (P) B829
Chem. Fabr. von Heyden A.-G. Antimony compounds; Production of secondary and tertiary aromatic —— (P) B809
Arsenic-antimony compounds; Production of organic —— (P) B809, B810, B810
Explosives; Manufacture of ammonium nitrate —— capable of being cast and moulded (P) B155
Stibinic acids; Production of complex compounds of aromatic —— (P) B810
Sulpho-halogen amides; Preparation of alkali salts of aromatic —— (P) B811
and W. Moewes. Sodium bisulphate; Method of packing —— (P) B17
and C. Philipp. CC-Phenylalkylmethanedialkylsulphones; Preparation of —— (P) B354
and H. Schmidt. Diarylantimony compounds; Preparation of —— (P) B809, B810
Monoarylantimony compounds; Preparation of —— (P) .. B810
Chem. Fabr. vorm. Weiler-ter Meer. Adhesive; Manufacture of —— from nitrocellulose, for leather, wood, paper, glass, porcelain, etc. (P) B143
Aminonaphthalene- and aminohydroxynaphthalenesulphonic acids; Preparation of derivatives of —— containing sulphur (P) B413
Aromatic sulphonyl chlorides; Production of —— (P) .. B591
Distillation; Separation of liquid mixtures by —— (P) .. B283
Tanning agents; Manufacture of easily soluble —— (P) .. B482
and E. Froelich. Alkylated amines; Preparation of —— (P) B400
and G. Racky. Cellulose acetate; Preparation of plastic substances from —— (P) B553
and K. Utt. Tanning materials; Preparation of artificial —— (P) B919
Chem. Fabr. Weissenstein Ges. *See* Baum, G. .. B101*, B944*
Chem. Laboratorium für Anstrichstoffe G.m.b.H. *See* Welthöner, R. B392

Dyeing with vat dyestuffs (P) B410
Ethyl chloride; Manufacture of —— (P) B654
Fertiliser; Manufacture of a non-deliquescent potassium-nitrogen —— which can be easily distributed (P) .. B956
Formaldehyde; Preparation of —— (P) B449
Fungicide and insecticide (P) B804
Gas and vapour mixtures; Separating —— by means of charcoal (P) B322
Gases and vapours; Absorption of —— and the carrying out of catalytic reactions (P) B698
Gases and vapours; Separating constituents of mixtures of —— (P) B157, B157
Halogen-substitution products of hydrocarbons; Converting —— into hydrocarbons or into halogen-substitution products containing a higher number of carbon atoms (P) B200
Hydroxyanthranilic acids; Preparation of derivatives of —— (P) B863
Indigoid vat dyestuff and process of making it (P) B782
Insecticide for soil insects (P) B801
Ketobutyric acids; Preparation of —— (P) B354
Mercaptoaryliminonaphthoq inono derivatives; Production of —— (P) B501
Methane; Manufacture of —— (P) B83, B848
Montan wax or its transformation products; Preparation of —— (P) B589
Mordants; Preparation of non-dyeing condensation products of the aromatic series containing sulphur for use as —— (P) B785
Nitriles; Production of —— from acid amides (P) B402
Organic acids; Preparation of —— (P) B401
Paper and fabrics; Producing colour effects on —— (P) .. B332
Paper; Manufacture of —— with colour effects fast to light (P) B826
Plant and animal parasites; Means for combating —— (P) B845
Potassium ammonium nitrate; Production of —— (P) .. B95
Resinous condensation products; Preparation of derivatives of —— from phenols and aldehydes (P) B797, B849
Resinous condensation products from phenols and aldehydes; Production of —— (P) B604, B797, B797
Resinous condensation products; Preparation of —— from phenol derivatives and formaldehyde (P) B870
Silver bromide emulsions; Sensitising —— for green rays (P) .. B813
Sludges; Apparatus for continuous cooling, accompanied by purification, of hot —— (P) B4
Steam distillation; Expulsion of volatile substances by means of —— (P) B543
Succinimides; Preparation of CC-substituted —— (P) .. B811
Sulphonic acids of the arylides of 2.3-hydroxynaphthoic acid; Preparation of —— (P) B88*
Tanning agents; Preparation of —— (P) B800
Tanning agents etc.; Production of condensation products containing sulphur for use as —— from aromatic hydroxy-compounds (P) B800
Tanning hides (P) B919
Textile materials; Fulling —— (P) B30
Thiodiglycol; Removal of the odour of —— (P) B35
Vaccine; Preparation of a —— from living native bacilli, or from acid-resistant bacilli previously treated with immunised serum (P) B353
Vegetable fibres; Improvement of —— (P) B977
Mejdell, T. *See* Falck, H. J. B942
Melamid, M. Core oils; Preparation of —— (P) B302
Hydrocarbons; Cracking or decomposition of materials containing or yielding —— (P) B1008
Tanning and manufacture of tanning substances (P) B841
and Hein und Co. Tanning; Process of —— and the manufacture of tanning substances from waste sulphite liquor (P) B684

Subject Index

N.B.—The Society's Transactions and the Abstracts are paged separately and are indicated by the letter T *following and the letter* B *preceding respectively the number of the page. The letter* (P) *indicates that the matter referred to is a patent.*

An asterisk appended to the number of a page indicates that the title only of an article is given or, in the case of patents, either the title only or the title and a reference to a previous patent.

PAGE

Abietic acid; Carbon skeleton of —— and dehydrogenating disruption in the abietic acid series. Ruzicka and others .. B114
  Gentle action of potassium permanganate on ——. Ruzicka and Meyer .. B114
Abietic acids extracted from different kinds of colophony; Identity of ——. Dupont and Uzac .. B433
Abrasive articles; Production of hot-pressed ——. (P) Platsch .. B295
  materials. (P) Deutsche Ton- und Steinzeugwerke A.-G. .. B295
  materials; Process for working up artificial ——. (P) Vierheller .. B104
  paper or cloth for polishing purposes. (P) Jackson .. B129
  paper; Manufacture of waterproof ——. (P) Behr and Co., and Crupi .. B331
  sheet material. (P) National Lead Co. .. B251
  substances; Production of —— from boron and carbon. (P) Podszus, and Hartstoff-Metall A.-G. .. B982
Absorbent material; Manufacture of —— for use in electric batteries etc. (P) Hilditch and others .. B22
Absorption apparatus. (P) Tyler .. B42
  device. (P) Piron, and Piron Coal Distillation Systems .. B321
  of gases in liquids. (P) Wolf .. B737
  towers; Extension of the theory of ——. Van Arsdel .. B321
  towers; Theory of ——. A correction. Partington and Parker .. 52T
Acacatechin; Production of maclurin from ——. Hazleton and Nierenstein .. B880
Acacias; Yellow pigments and tannins of Australian ——. Petrie .. B935
Acenaphthaquinone; Dyestuffs derived from ——. Sircar and Guha .. B288
  Preparation of naphthalic acid by oxidation of ——. Whiston .. 370T
Acenaphthene series; Studies in the ——. 4-Aminoacenaphthene. Morgan and Stanley .. 343T
  Sulpho-derivatives of ——. Dziewonski and Stolyhwo .. B901
Acetaldehyde; Determination of formaldehyde in presence of acetone and ——. Mach and Hermann .. B446
  Determination of —— in wine or spirits. Beythien and others .. B959
  in fruits; Microchemical detection of ——. Griebel .. B922
  Mechanism of formation of acetic acid from ——. Kiss and Demény .. B352
  New type of change of —— by fermenting yeast. Neuberg and Reinfurth .. B191
  Preparation of ——. (P) Deutsch, and Consortium für electro-chem. Ind. .. B811
  Preparation of —— from acetylene:
    (P) Consortium für Elektrochem. Ind. .. B449, B450*
    (P) Sakom .. B449
    (P) Thorin, and Stockholms Superfosfat Fabriks Aktiebolag .. B770*
  Preparation of ethyl acetate from ——. (P) Consortium für Elektrochem. Ind. .. B449
  Preparation of a reaction product of aniline and —— for use as a vulcanisation accelerator. (P) Cadwell, and Naugatuck Chemical Co. .. B848
Acetals; Catalytic reduction of ——. Kariyone and Kimura .. B113
Acetannin. Corfield and Short .. B805
Acetates; Thermal decomposition of some pure metallic ——. Kröning .. B847
Acetic acid; Apparatus for manufacture of ——. (P) Matheson, and Canadian Electro Products Co. .. B234*
  Concentration of aqueous solutions of ——. (P) Lichenthaeler .. B671
  Determination of butyric acid, propionic acid, and ——. Fyleman .. 142T, B399
  Manufacture of concentrated ——. (P) Grasselli Chemical Co. .. B891*
  Mechanism of formation of —— from acetaldehyde and oxygen. Kiss and Demény .. B352
  Nature of adsorption of —— by charcoal. Pavlov .. B1010
  Oxidation of —— by various metallic chromates compared with oxidation by silver bichromate in the argento-sulphochromic method of determination of carbon. Simon .. B581
  Purification of ——. Orton and Bradfield .. B535
  Separating —— from wood distillates. (P) Piron, and Piron Coal Distillation Systems .. B164

PAGE

Acetic anhydride; Determination of acetic acid in ——. Walton and Withrow .. B199
  Manufacture of ——:
    (P) Consortium für Elektrochem. Ind. .. B34
    (P) Deutsch, and Consortium für Elektrochem. Ind. .. B811
    (P) Meister, Lucius, u. Brüning .. B890
    (P) Wacker Ges. für Elektrochem. Ind. .. B890
  Preparation of —— without chlorine or phosphorus. Bielecki and Ciechanowski .. B653
Acetone, alcohol, and other products; Fermentation of vegetable matter to obtain ——. (P) Norbury and others .. B1025
  -butyl alcohol fermentation. *See under* Fermentation.
  Determination of formaldehyde in presence of acetaldehyde and —— and of formaldehyde and acetone in presence of each other. Mach and Hermann .. B446
  Formation of —— from acetates. Hägglund and Hedman .. B400
  Industry; Utilisation of by-products of ——. Ponzio .. B277
  Metals for use in handling ——. Remler .. B446
  Preparation of ——. (P) Wells and Hunt .. B732
  Preparation of —— by distillation of calcium acetate. Ardagh and others .. B1029
  Production of —— by action of potassium acetate on acetic anhydride. Luce .. B114, B446
  Production of butyl alcohol and —— by fermentation of molasses. (P) Robinson, and Atlas Powder Co. .. B1025
  substances; Qualitative tests for ——: their significance and value. Bigwood and Ladd .. B232
  Tests for ——. Leffmann .. B965
Acetonylbarbituric acid and its derivatives. Dox and Houston .. B276
Acetophenone; Purification and physical constants of ——. Morgan and Lammert .. B491
Acetyl value of fats. Raymond and Clot .. B795
  value of fats; Determination of ——. Blazzo .. B479
  value of fats; Gravimetric determination of ——. Elsbach .. B23
4-Acetylaminoacenaphthene. Morgan and Stanley .. 345T
4-Acetylaminocoumaranone; Preparation of ——. (P) Dirks .. B812
Acetylcellulose. *See* Cellulose acetate.
O-Acetyl-derivatives of aromatic hydroxycarboxylic acids; Preparation of ——. (P) Bayer and Co. .. B617
Acetylene-aldehyde resins. *See under* Resins.
  and ammonia; Manufacture of condensation products containing nitrogen from ——. (P) Rhenania Ver. Chem. Fabr. A.-G., and Stuer .. B537
  Catalytic condensation of —— with benzene and its homologues. Reichert and Nieuwland .. B152
  Catalytic condensation of —— with phenols. Wenzke and Nieuwland .. B247
  Condensation of —— with hydrogen sulphide in presence of alumina. Tschitschibabin and Bagdassarjanz .. B888
  Contact condensation of ——. Zelinsky .. B242
  Determination of phosphine in ——. Perks .. B161
  dissolved in acetone; Storage of ——. (P) Lepsius .. B502
  Interaction of —— with fused caustic alkalis. Fry and others .. B979
  or like gases dissolved in liquids; Porous charges for containers for ——. (P) Pintsch A.-G. .. B1004
  Manufacture of solid polymerisation products of ——. (P) Elektrizitätswerk Lonza .. B115
  and nitrogen; Explosion of ——. Effect of addition of oxygen on production of hydrocyanic acid. Garner and Saunders .. B868
  and other explosive gases, or solutions containing them; Porous material for absorbing ——. (P) Koesling .. B1004
  Porous mass for use as an absorbent for dissolved ——. (P) Pintsch A.-G. .. B810
  Preparation of acetaldehyde from ——:
    (P) Consortium für Elektrochem. Ind. .. B449, B450*
    (P) Sakom .. B449
  Prevention of accidents in use of ——. Rimarski .. B776
  Production of alcohol from ——. (P) Karo .. B537
  Purification of ——. (P) Consortium für Elektrochem. Ind. .. B502
  Storage of dissolved —— in bottles. (P) Schneider .. B550
Acetylides; Formation of metallic ——. Durand .. B941

PAGE

Acetylsalicylic acid; Compositions for use in manufacture of salts of ——. (P) Gerngross and others B492
acid; Melting point of ——. Putnam B805
Production of water-soluble durable preparations containing ——. (P) Alseben and Von Wülfing B492
Acetyltropic acid; Preparation of alkamino esters of ——. (P) Chem. Werke Grenzach A.-G. B403
Acid concentrating towers. (P) Hoynton and others B869
distributor for Gay Lussac or Glover towers. (P) Patten, and Davison Chemical Co. B908
fumes; Action of —— on the soil. Wieler B646
functions; Use of quinhydrone electrode for determination of ——. Harris B203
liquids; Evaporating apparatus for concentrating ——. (P) Appareils et Evaporateurs Kestner B350
plant equipment. (P) Fairlie B133
-proof alloys. (P) Dreifuss B875
-proof tubes, bricks, etc., from diatomaceous earth or the like; Production of strong, impermeable ——. (P) Ahlmann-Ohlsen B713
-resisting alloys:
(P) Clement, and Cleveland Brass Manuf. Co. B21
(P) Doeblin B340, B561
-resisting diaphragms; Porous —— from pyroxylin. (P) Lyndon B90
-resisting iron alloys. Leprevost B750
-resisting iron-silicon alloys; Preparation of objects of ——. (P) Terrisse and Levy B262
sludge from mineral lubricating oils; Apparatus for treating ——. (P) Maitland, and Sun Oil Co. B822
sludge from petroleum refining; Treating ——. (P) Higgins, jun., and others B411
Acidimetry; Theory and practice of rational use of indicators in ——. Thiel B357
Acidity; Electric measurement of available —— and its applications in English brewing. Parsons B192
Acids; Apparatus for concentrating ——. (P) Patten B15
Calculations on neutralisation of mixtures of ——. Prideaux and Ward B317
Diluting ——. (P) Eyleson, and General Chemical Co. .. B1012
Displacement of —— by diffusion. Demoussy B171
Fatty ——. Armstrong and Allan 297T
fatty; Action of chlorine water on unsaturated ——. Grün and others B838
fatty; Application of diffusion to recognition and separation of ——. Heiduschka and Ripper B184
fatty; Converting hydrocarbons into ——. (P) "Kilva" Ges. B102
fatty; Distribution of —— in nature. Armstrong and Allan 210T
fatty; Existence of bimolecular complexes of higher saturated ——. Morgan and Bowen 347T
fatty; Formation of the ——. Armstrong and Allan 214T
fatty; Influence of water on course of reaction of unsaturated —— with alcoholic iodine solution. Margosches and others B680
fatty; Manufacture of carbohydrate esters of ——. (P) Soc. de Stearinerie et Savonnerie de Lyon B101
fatty; α-Monoglycerides of —— of high molecular weight. Bergmann and Sabetay B681
fatty; Observations on the higher ——. Morgan and Bowen 346T
fatty; Preparation of compounds of ——. (P) Ellis B77
fatty; Preparation of highly unsaturated —— of fish oils. Tsujimoto and Kimura B62
fatty; Production of alkali salts of higher ——. (P) Lund .. B526
fatty; Relative solubilities of calcium and magnesium salts of higher ——. Blitz and Röhrs B184
fatty; Separation of —— from oils or fats. (P) Wecker .. B877
fatty; Separation of oxidised —— from non-oxidised fatty acids. (P) Petroff B479
fatty; Separation of —— present in animal fats from those peculiar to marine animal oils. (P) Stiepel B479
fatty; Separation of solid saturated from liquid ——. Holde and others B755, B916
fatty; Stills for treatment of ——. (P) Müller B432
fatty; Study of resin acids and oxidised —— and of their analytical separation. Wolff B525
fatty; Synthesis of normal —— from stearic to hexacosanic acid. Levene and Taylor B565
fatty; Treatment of unsaturated ——. (P) Lund and others .. B391*
of the formulæ $R(CH_2)_xCOOH$ and $R.CR'H.CH_2.COOH$; General method of preparation of ——. Verley B575
organic; Fermentation of solutions containing xylose, arabinose, and other pentose sugars with the production of acetic, lactic, and other ——. (P) Fred and Peterson B569
organic; Preparation of ——. (P) Meister, Lucius, u. Brüning .. B401
organic; Preparation of —— by biological methods with the aid of thread fungi. Falck and Van Beyma thoe Kingma .. B649
organic; Separating —— from aqueous solutions. (P) Piron, and Piron Coal Distillation Systems B164
Precipitate formed by adding strong acids to aqueous solutions of picric acid as a test for strong ——. Denigès B235
Preparation of α-alkylated —— and their derivatives. (P) Meister, Lucius, und Brüning B353
Production of salts of water-soluble —— from peat-forming plants. (P) Brat B537
Strength of acid function of sulphur-oxygen ——. Kolthoff .. B333
N-Acidyl derivatives of N-alkylamino-fatty acids; Preparation of ——. (P) Schebler B450
Acidylapocincholoipone nitriles; Preparation of ——. (P) Kaufmann B449
Acocantherin; The African poison ——. Moir B491

Aconite alkaloids. Aconitine and pyraconitine. Majima and Suginomé B923
alkaloids. Different isomerides of japaconitine. Majima and others B923
alkaloids. So-called jesaconitine. Majima and Morio B924
Aconitine and pyraconitine. Majima and Suginomé B923
Acridine derivatives; Manufacture of ——. (P) British Dyestuffs Corp., and others B599
Acridine dyestuffs; Manufacture of ——. (P) Akt.-Ges. für Anilin-Fabr. B370
Acridinium compounds; Production of ——. (P) Cassella und Co. B808
Acrolein gels; Variation of insulating power of —— with the degree of condensation. Moureu and others B837
Acylacetyl compounds; Manufacture of ——. (P) Chem. Fabr. Griesheim-Elektron B413, B413
Adenine hexoside from yeast. Levene B535
Adhesives. (P) Broadfoot and Sons, and Robertson B684
Colloid-chemical evaluation of ——. Wislicenus and Lorenz .. B606
Manufacture of ——. (P) Sichel Kommanditges., and Stern .. B436
Manufacture of —— from casein. (P) Trutzer B842
Manufacture of —— from nitrocellulose. (P) Chem. Fabr. vorm. Weiler-ter Meer B143
Manufacture of —— from seaweed. (P) Thornley and others B347, B883*
Manufacture of sugar syrup and high-grade —— from extracted beet slices. (P) Smolenski B437
Production of pentosan —— from maize cobs and oat hulls. La Forge B274
for rubber and leather articles. (P) Bihling and Draemann .. B527
Adrenaline derivatives; Preparation of ——. (P) Funk and others .. B76
Preparation of —— from suprarenal capsules. (P) Stern and Battelli B889
See also Dihydroxyphenylethanolmethylamine
Adsorbent gels; Manufacture of ——. (P) Silica Gel Corp., and Patrick B379
materials; Application of ——. (P) Somerville and Williams .. B860
materials; Manufacture of ——. (P) Sauer B971, B972
materials; Manufacture and application of ——. (P) Somerville and Williams B787
Adsorbents; Drying and coating porous materials for use as ——. (P) Fitzpatrick B972
Adsorption of acetic acid by charcoal; Nature of ——. Pavlov .. B1010
by activated sugar charcoal; Mechanism of ——. Bartell and Miller B895
and heterogeneous chemical equilibrium. Pawlow B745
media; Re-activating ——, with simultaneous recovery of adsorbed products, by means of electrically generated heat. (P) Metallbank u. Metallurgische Ges., and N. V. Montaan Metaalhandel B405
Methods for distinguishing different types of ——. Pavlov .. B999
by porous bodies; Nature of ——. Williams 98T
of salts by activated sugar charcoal. Proof of hydrolytic adsorption. Miller B815
by substances of large surface area. Berl and Wachendorff .. B929
of vapours by charcoal. Coolidge B359
Adsorptive power of metal hydroxides. Von Euler and Nilsson .. B15
Aereboe-Wrangell system of manuring; Lime-phosphoric acid factor in relation to ——. Günther B305
Agar-agar free from proteins. Klostermann B148
Influence of electrolytes on swelling of ——. Dokan B393
Agaves; Preparation of fibres from ——. (P) Chem. Fabr. Griesheim-Elektron B415
Agglomerating fuel and other substances. (P) Sutcliffe B244
granular materials. (P) Chase B8
Agitating washing, liming, or tanning solutions; Rocker for ——. (P) Baxter B759*
Air; Adsorption apparatus for determination of organic vapours in ——. Kattwinkel B546
Apparatus for separating —— into its constituents. (P) Lafferty B747
containing volatile substances; Dehydration of ——. (P) Delpech B855
Determination of very small quantities of noxious substances in —— in the neighbourhood of factories. Pozzi-Escot .. B691
having a definite degree of dryness or humidity; Production of —— with the aid of salts and similar substances. Obermiller B542
-liquefying machines; Causes of explosions in ——. Butescu .. B293
Removal of dust and moisture from ——. (P) Schmies, and Deutsche Luftfilter-Bauges. B655
Removing dust, sand, soot, and other foreign bodies from ——. (P) Weller B366
Separating —— into its constituents and utilising them in performing work and supporting combustion. (P) Mewes and Mewes B621
Separation of —— into its constituents:
(P) L'Air Liquide B712
(P) Davis and others B558
Separation of constituents of —— and production of argon. (P) L'Air Liquide B379
washers. (P) Drying Systems, Inc. B931*
Aircraft; Covering for constructing ——. (P) Emerson B628
Ajowan oil. *See under* Oils, Essential.
Akrite:
Drescher B1015
Schulz B1015
Albumin compounds; Preparation of halogenated ——. (P) Mendel A.-G., and Wolffenstein B926
Production of light-coloured ——, free from inorganic salts, from blood serum. (P) Cappenberg B967

PAGE

Albumin—*continued.*
solutions containing medicinal and immunising substances; Preparation of ——. (P) Zeissler, and Chemical Foundation, Inc. B76
Albumose derivatives insoluble in gastric fluid. (P) Buddo B770
solutions; Production of ——. (P) Weidner B450*
Alcohol, acetone, and other products; Fermentation of vegetable matter to obtain ——. (P) Norbury and others B1025
Apparatus for obtaining absolute ——:
(P) Rodebush, and U. S. Industrial Alcohol Co. .. B486
(P) U. S. Industrial Alcohol Co. B569
from cane molasses. Effect of varying additions of acid. Owen and Bond B438
Catalytic decomposition of —— in presence of alumina. Goris .. B575
Catalytic dehydration of —— by alumina. Pease and Yung .. B318
Cause of low yield of —— on fermentation of molasses. Gupta and others 291T, B959
Chlorination of ——. Chattaway and Backeberg B615
Continuous distillation of ——. (P) Cyphers B922
Contraction of —— on dilution. Foran 338T
Dehydration of ——:
(P) Loriette B308
(P) Standard Development Co. B110*
(P) Steffens B570
Dehydration of —— by means of glycerin. Knecht and Muller 177T, B486
Dehydration of —— by means of glycerin and solutions of salts in glycerin. Mariller B28
Dehydration of ——. The system water-alcohol-petrol-potassium carbonate. Gay and others B802
denatured; Detection of diethyl phthalate in preparations made with ——. Leffmann B959
Detection of aldehydes in ——. Isnard B731
Determination of ——. Roos B1029
Determination of —— in bread. Sundberg B228
Effect of —— on growth of barley plants. Puri B1022
-ether motor fuel; Preparation of ——. (P) Lichtenthaeler .. B411*
ether, and water; Determination of water in mixtures of ——. Newman 285T, B965
ether, and water; Vapour pressure curves for systems containing ——. Louder and others B925
Formation of pyruvic acid and —— from calcium lactate by yeasts. Kayser B725
and heavy petrol; Bench experiments on motor fuels composed of mixtures of ——. Watson and Ormandy B856
and liquid hydrocarbons; Apparatus for dehydrating mixtures of ——. (P) Ricard, Allenet et Cie. B899
Manufacture of yeast and ——. (P) Klein B273
Periodic variation of catalytic activity of copper with temperature of reduction in decomposition of ——. Palmer and Constable B848
Preparation of —— free from aldehydes. Cross and Swain .. B194
Preparation of pure ——. (P) Heuser B693
Production of absolute ——. (P) U.S. Industrial Alcohol Co. B193
Production of —— from acetylene. (P) Karo B537
Production of ethylene from ——. Hisamura and Imaoka .. B232
Production of liquid fuel mixtures containing ——. (P) Loriette B85
Purification of ——. Castille and Henri B576
Recovering absolute ——. (P) Backhaus, and U. S. Industrial Alcohol Co. B884*
Recovery of —— from coke-oven gas. Neumann B207
Recovery of —— from ethylene in coke-oven gas:
Glund and Schneider B547
Glund and others B547
Removing —— from liquids. (P) Heuser B762
Utilisation of cacao hulls for production of ——. (P) Bielmann .. B487
value of fats; Determination of ——. Biazzo B479
See also Spirit.
Alcohols; Apparatus for obtaining —— free from water. (P) U.S. Industrial Alcohol Co. B569
Catalytic dehydration of ——. Brown and Reid B965
Catalytic dehydration of hydroaromatic ——. Senderens .. B114
Determination of higher —— in presence of some organic solvents, particularly hydronaphthalenes. Lindner and Zickermann B768
Distillation and rectification of ——. (P) Barbet et Fils et Cie. B569
in essential oils; Esterification in inert media for determination of ——. Boulez B447
Formation of hydrocarbons and —— by catalytic hydrogenation of aromatic and aliphatic-aromatic carbonyl compounds. Straus and Grindel B925
of the formulæ $R(CH_2)_2OH$ and $R.CR'H.(CH_2)_2OH$; General method of preparation of ——. Verley B575
Interaction of —— with nitrogen peroxide. Bass and Johnson .. B312
Manufacture of ——. (P) Ellis and others B492
Manufacture of acid extract and —— from hydrocarbon gases. (P) Ellis and others B492
Obtaining water-free ——. (P) U.S. Industrial Alcohol Co. B103, B764*
Preparation of aldehydes and —— from hydrocarbons. (P) Kloppenburg, and N. V. de Bataafsche Petroleum Maatschappij .. B808
Preparation of primary —— by catalytic hydrogenation of aldehydes. Carothers and Adams B730
Production of —— from aldehydes. (P) Badische Anilin und Soda Fabr. B537
Volumetric turbidity method for analysis of binary mixtures of ——. Bogin B970
Aldehyde-bisulphite reaction; Use of —— in volumetric analysis. Determination of thiosulphate in presence of sulphite. Kurtenacker B631
Aldehydes and acetylene; Fusible resins from ——. (P) Novotny and others B24
Assimilation of —— by plants. Sabalitschka and Riesenberg B300, B306

PAGE

Aldehydes and acetylene—*continued.*
Assimilation of —— by plants. Influence of formaldehyde on function of plant enzymes. Sabalitschka B842
Benzidine as reagent for ——. Van Eck B33
Detection of —— in anæsthetic ether. Isnard B730
Detection of —— in chloroform and alcohol. Isnard B731
Feeding of plants with ——. Sabalitschka B346
Interaction of aromatic —— with nitrogen peroxide. Bass and Johnson B312
Manufacture of artificial resins from ——. (P) Consortium für Elektrochem Ind. B141
and other oxidation products; Preparation of ——. (P) Bibb .. B403*
and phenols; Manufacture of derivatives of resinous condensation products of ——:
(P) Deutsch and others B604
(P) Meister, Lucius, u. Brüning B797, B840
and phenols; Manufacture of resinous condensation products of ——. (P) Meister, Lucius, und Brüning B797, B797
and phenols; Reactions between ——. (P) Van Itallie and Harmsma B730
Preparation of alcohols and —— from hydrocarbons. (P) Kloppenburg, and N. V. de Bataafsche Petroleum Maatschappij B808
of the pyrrole series; Preparation of ——. (P) Kalle und Co. B890
Tests for ——. Leffmann B965
Aldol; Preparation of ——. (P) Deutsch, and Consortium für Elektrochem. Ind. B811
Alepic acids; The α- and β- —— from oleo-resin of Aleppo pine. Dupont B839
Aleurites montana, Wilson; Fatty oil from seeds of ——. Parker and others B478
Aleurone cells of cereals. Bennion B688
layer of wheat and barley; Effect of germination on the ——. Bennion B884
Alfalfa. *See* Lucerne.
Algæ; Significance of ash content of certain marine ——. Haas and Russell-Wells B197
Simultaneous determination of mineral and organic iodine in ——. Lelièvre and Ménager B419
Aliphatic ammonium bases; Intensity of action on nerve endings of various substituted quaternary ——. Külz B766
halides and halohydrin compounds; Preparation of various ——. Bogert and Slocum B446
Alkali lyes containing organic impurities; Regenerating ——. (P) Sidler and others B421
lyes contaminated with hemicelluloses; Purification of coloured ——. (P) Küttner and Profeld B52
melts; Anodes for electrolysis of ——. (P) Badische Anilin- und Soda-Fabrik B430
solutions; Embrittling of steel by caustic ——. Williams and Homerberg B471
treatment of plant materials; Treatment of liquors obtained in the ——. (P) Colas and others B708
Alkali-aluminium fluorides; Production of double —— technically free from iron. (P) Chem. Fabr. Griesheim-Elektron .. B869
Alkali-aluminium silicates; Hydration of solid ——. (P) Permutit A.-G., and Schüler B294
Alkali amides; Manufacture of ——. (P) Ewan B980
Alkali arsenites; Manufacture of ——. (P) Henkel and Meyer .. B257
Alkali bromides; Analysis of ——. Winkler B253
Manufacture of ——. (P) Michael und Co. B294
Alkali carbonates; Determination of —— in presence of bicarbonate. Sabalitschka and Kubisch B556
Manufacture of ——:
(P) Plauson B173
(P) Wipfler B256
Alkali chromites and their solutions. Fricke and Windhausen .. B215
Alkali cyanides; Manufacture of ——:
(P) Jacobs, and Du Pont de Nemours and Co. .. B217*, B671
(P) Krämer and Reiffen B908
Manufacture of —— and retorts therefor. (P) Metzger, and California Cyanide Co. B787
Alkali hydroxides; Manufacture of ——. (P) Wipfler B256
Manufacture of —— and of gas. (P) Reid and Hogan B16
Alkali hypochlorites; Production of solid ——. (P) Wieger .. B421
Alkali iodide-metal iodide compounds of therapeutic value; Preparation of ——. (P) Truttwin B967
Alkali metals; Determination of —— in aluminium and its alloys. Schürmann and Schob B299
metals; Manufacture of ——. (P) Ewan B752
metals; Manufacture of alloys of lead and ——. (P) Calcott, and Du Pont de Nemours and Co. B950
Alkali metaphosphates; Insoluble ——. Pascal B172
Number of insoluble ——. Pascal B510
Alkali nitrates; Manufacture of ——. (P) Badische Anilin und Soda Fabrik B421, B747, B909
Manufacture of —— from alkali chlorides. (P) Badische Anilin- und Soda-Fabr. B467, B633, B633
Manufacture of hydrocyanic acid and ——. (P) Liebknecht, and Roessler and Hasslacher Chemical Co. B558
Alkali pentaborates; Manufacture of ——. (P) Kelly B173
Alkali polysulphides; Manufacture of ——. (P) Sutherst, and Herbert and Herbert, Inc. B511
Alkali salts of aromatic sulpho-halogenamides; Preparation of ——. (P) Chem. Fabr. von Heyden B811
salts, especially carbonates; Manufacture of ——. (P) Plauson B16
salts; Separation of —— by aqueous ammonia. (P) Dolbear, and Industrial Research Co. B1012

PAGE

Alkali silicates; Preparation of solutions of —— suitable for intravenous injection. (P) Kühn B616
Production of solutions of ——. (P) Codd B56
See also Water-glass

Alkali sulphates; Manufacture of ammonium sulphate and pure, anhydrous ——. (P) Bambach B633
Manufacture of hydrochloric acid and ——:
(P) Brandenburg B419
(P) Weber B746

Alkali sulphides; Apparatus for manufacture of —— from sulphates. (P) Laury B869
Production of —— from alkali sulphates. (P) Rhenania Ver. Chem. Fabr. A.-G., Zweigniederlassung Mannheim .. B421, B421
Manufacture of —— from thiosulphates. (P) Koppers Co. B173

Alkali thiosulphates; Manufacture of ——. (P) Sutherst, and Herbert and Herbert, Inc. B511
Manufacture of —— and removing sulphur dioxide from gases. (P) Chem. Fabr. Griesheim-Elektron B334
Separation of sulphur dioxide from gases containing it, with simultaneous production of ——. (P) Chem. Fabr. Griesheim-Elektron B16

Alkali xanthates; Manufacture of ——. (P) Rosenstein B908

Alkali zincates. Fricke and Ahrndts B745

Alkaline liquors; Electrolysis of ——. (P) Badische Anilin- u. Soda Fabr. B747
liquors; Oxidising organic substances in ——. (P) D'Ans .. B743*
liquors; Regenerating ——. (P) D'Ans, and Chem. Werke Auerges. B707
solutions; Anodes for electrolysis of ——. (P) Badische Anilin- und Soda-Fabrik B430

Alkaline-earth compounds of organic phosphorus compound contained in milk casein. (P) Soc. of Chem. Ind. in Basle .. B314

Alkaline-earth formates; Production of ——. (P) Badische Anilin und Soda Fabr. B537

Alkaline-earth metals and lead; Production of alloys of ——. Jellinek and Tomoff B873
metals; Production of alloys containing ——. (P) Kroll B301, B914

Alkaline-earth salts of organic acids; Preparation of ——. (P) Depp Söhne, and Zeltschel B891

Alkaline-earth sub-salts. Guntz and Benoit B670

Alkaline-earth sulphates; Kilns for calcining ——. (P) Akt.-Ges. f. Anilin-Fabr. B17

Alkaline-earth sulphides; Apparatus for manufacture of —— from sulphates. (P) Laury B869
Manufacture of ——. (P) Löwenstein B95

Alkalis; Electrolysis of molten ——. (P) Badische Anilin- u. Soda Fabr. B747
Producing and utilising alumina and ——. (P) Cowles, and Electric Smelting and Aluminum Co. B870*

Alkaloid content of seeds of *Leguminosæ* (*Lupinus* and *Lathyrus*). Guillaume B311
Spathulatine, a new —— from *Lupinus spathulatus* (Rydb.). Couch B1028

Alkaloids: Aconite ——. Aconitine and pyraconitine. Majima and Suginomé B923
Aconite ——. Different isomerides of japaconitine. Majima and others B923
Aconite ——. So-called jesaconitine. Majima and Morio .. B924
Alteration of physiological properties of —— by sterilisation by heat. Bretcau B1028
Anhalonium ——. Späth and Gangl B73
Behaviour of bacteria towards ——. Green and Lonstein .. B490
of cinchona and their derivatives; Preparation of reduction products of ——. (P) Boehringer u. Söhne B401
in cinchona extract; Determination of ——. Recordati .. B150
Dragendorff's reagent for detection of ——. Cappelli .. B894
lupin-; Determination of ——, particularly in lupin seeds. Salalitschka and Zaher B653
Microchemical detection of ——. Rosenthaler B969
Mydriatic —— from *Datura* species. Osada B887
of opium; Extraction of ——. Kanewskaja B1028
Purification, and identification by micro-analysis, of —— isolated from bodies. Ylmer B963
Volumetric determination of ——. Jonescu and Spirescu .. B196
of yohimbé bark. Danckwortt and Lay B691

Alkamine esters of tropic acid and acetyltropic acid; Preparation of ——. (P) Chem. Werke Grenzach A.-G. B403

Alkyl carbonates; Preparation of normal ——. (P) Boehringer und Söhne B355
chlorides; Preparation of ——. Norris and Taylor B446
compounds; Manufacture of ——:
(P) Bader and Dreyfus B314*
(P) Dreyfus B850*
derivatives of organic compounds; Preparation of ——. (P) Theimer and Steward B153
derivatives of vat dyestuffs; Manufacture of ——. (P) Cassella und Co. B590
ethers of phenol and of dihydroxybenzenes; Electrochemical oxidation of ——. Fichter and Dietrich B277
halides; Manufacture of ——. (P) Wibaut B731

Alkylamines; Catalytic preparation of ——. Brown and Reid .. B965
Preparation of ——:
(P) Bader and others B450*
(P) Chem. Fabr. Weiler-ter Meer B400
Separating —— from ammonia and other gases. (P) Green and others B769

N-Alkylamino-fatty acids; Preparation of —— and of their N-acidyl derivatives. (P) Scheibler B450

PAGE

Alkylaniline salts of α- and β-naphthalenesulphonic acids. Forster and Keyworth 302T

α-Alkylated acids and their derivatives; Preparation of ——. (P) Meister, Lucius, und Brüning B353

Alkylating with methyl ethyl sulphate. Thayer B536
organic compounds. (P) Theimer and Steward B732

1-Alkylcyclohexan-3-ones; Preparation of ——. (P) Siefert .. B810

N-Alkylleucinol esters of p-aminobenzoic acid; Relation between chemical constitution and local anæsthetic action in ——. Graf B443

Alkyloxyacridines; Manufacture of ——. (P) Cassella und Co. B768

Alkylpulegones; Preparation of mono- ——. Haller and Ramart B731

Alkylpyridines; Preparation of ——. (P) Chem. Fabr. Schering B811

Allelocatalysis and the growth of yeast. Peskett B958

Alloy metals used in alloy steels. Vogel 365T
systems; Application of ideal solubility curve to interpretation of equilibrium diagrams in ——. Andrews and Johnston B836

Alloys ——:
(P) Etchells and others B875
(P) Fenchel B561
(P) General Electric Co. B561, B637
(P) Girin, and Soc. Anon. de Commentry, Fourchambault, et Decazeville B794*
(P) Iytaka, and Mitsubishi Zosen Kaisha, Ltd. .. B637
(P) Jühling und Co. B21
(P) Kemet Laboratories Co. B717
(P) Kirk and Dumler B523
(P) Paez B950
(P) Padmore and others B262
(P) Walter B914*
Acid-proof ——. (P) Dreifuss B875
Acid-resisting ——:
(P) Clement, and Cleveland Brass Manuf. Co. .. B21
(P) Doeblin B310
Ageing effect of quenched ——. Igarasi B913
Apparatus for heat-treating ——:
(P) Kochendorfer, and Western Electric Co. B876*
(P) Kochendorfer and others B876*
Bearing-metal ——. (P) Müller and Sander B752
for bearing metals; Hardening ——. (P) Evans B837
Blowing —— in a converter. (P) Seelig B523
Coatings formed on corroded ——. Enos and Anderson .. B791
comprising iron, nickel, chromium, and molybdenum (P) Girin, and Soc. Anon. de Commentry, Fourchambault, et Decazeville B302*
containing alkaline-earth metals; Production of ——. (P) Kroll B301, B914
containing tungsten carbide; Manufacture of ——. (P) Patent Treuhand Ges. für Elektrische Glühlampen, and General Electric Co. B752
Corrosion-resistant —— for use in acid mine water. Anderson and Enos B1016
Corrosion-resisting ferrous ——. (P) Smith, and Ludlum Steel Co. B949
Degasifying agent for molten ——. (P) Scheuch, and Western Electric Co. B222
Dental ——. (P) Jühling und Co. B523
Determination of coefficients of thermal expansion of some commercial ——. Friend and Vallance B337
Die-casting ——. (P) Pack, and Doehler Die-casting Co. B914
for electrical contacts. (P) Western Electric Co. B950
Electrical resistance of ——. Lichtenecker B794
for electrical resistance elements. (P) Fahrenwald B62
Ferrous ——:
(P) Billington B637
(P) Saklatwalla B600
ferrous; Micrographic detection of carbides in ——. Pilling B258
ferrous; Research on ——. Rosenhain B832
Fusible ——. Bauer and Schack B521
for gears. (P) Babson, and Bausch Machine Tool Co. .. B340
Heat conductivity of technically important ——. Jakob .. B913
Heating —— in an electric furnace. (P) Kalling and others B339
for high-temperature use. (P) Smith, and Electro-Metallurgical Co. B793
Impact elasticity of ——. Welter B260
Increasing the electrical conductivity of ——. (P) Metallbank and Metallurgische Ges. B561
Manufacture of ——:
(P) Paez B222
(P) Walter B718*
Manufacture of ductile bodies of —— of high fusing point. (P) Aoyagi B718*
Manufacture of hard ——. (P) Patent Treuhand Ges. für Elektrische Glühlampen, and General Electric Co. .. B950
of metals of the iron group. Schulz B1015
Method of making ——. (P) Hamilton and Evans B522
Non-ferrous ——. (P) Northover, and Manganese Bronze and Brass Co. B914*
poor in carbon and silicon; Production of ——:
(P) Aktiebolaget Ferrolegeringar B752
(P) Kalling and others B523*
Precious-metal ——. (P) Norske Molybdenprodukter A./S. B753
of precious metals; Advances in methods of refining ——. Eger B337
Preparation of pure ——. Mehl B835
for pressed or cast bearings. (P) Heddernheimer Kupferwerk und Süddeuts. Kabelwerke A.-G. B984
for production of workable, acid-resisting articles. (P) Doeblin B561
Properties of fusible ——. Budgen 200T, B678
Separation of metals and ——. (P) Skappel B389

PAGE

Alloys—*continued*.
for sharpening scissors, razors, or other similar cutting instruments. (P) Hansen B181
susceptible of tempering; Heat treatment of ——. (P) Comp. des Forges de Châtillon, Commentry et Neuves-Maisons B1017
Treatment of metals for manufacture of ——. (P) Gerdts B680
for turbine blades. (P) Iytaka B222*
Use of light and ultra-light —— for pistons of internal-combustion engines. De Fleury B678

Allyl ethers of carbohydrates. Tomecko and Adams B190

Allylisothiocyanate content of *Brassica nigra*; Increase in —— on manuring with sulphur. Goldoni B353
Determination of —— in mustard. Morvillez and Meesemaecker B922
See also Mustard oil *under* Oils, Essential.

4-Allyloxyphenylmalonamic acid and its esters; Preparation of ——. (P) A.-G. für Anilin-Fabr. B810

Almond oil. *See under* Oils, Fatty.

Almonds; Detection of bitter —— in sweet almonds and their physiological significance. Plahl B1026

Alum; Manufacture and refining of sugar with production of potassium ——. (P) Elliott B109
solutions; Composition of precipitate from partially alkalinised ——. Miller B377

Alumina; Action of —— on calcium sulphate. Marchal B92
Analysis of products with a high content of ——. Hiller B581
Behaviour of —— in the flotation process. Berl and Pfannmüller B836
Constitution and evolution of precipitates of ——. Pascal .. B245
Constitution of red slime produced in manufacture of —— from bauxite by Bayer's process. Waeser B254
Local microchemical detection of —— in ceramic materials etc. Hermann B633
Manufacture of ——. (P) Boehm B421
Manufacture of aluminium chloride and pure ——. (P) Pedemonte B557
Manufacture of —— from aluminium nitrate. (P) Halvorsen, and Norsk Hydro-Elektrisk Kvaelstofaktieselskab .. B596
Manufacture of ——, free from iron, from bauxite. (P) Platsch B17
Manufacture of nitrates and ——. (P) Falck and others B942
Manufacture of pure ——. (P) Koritschoner and Hansgirg B908
Manufacture of —— by reduction of aluminium sulphate. (P) Askenasy and Dreifuss B294
Producing and utilising alkalis and ——. (P) Cowles, and Electric Smelting and Aluminum Co. B870*
Production of glass-making salts and ——. (P) Frink .. B596
-silica; The system ——. Bowen and Greig B512
and sodium alizarate. Williamson B826
See also Aluminium oxide.

Aluminates; Action of high temperatures on ——. Matignon B93

Aluminiferous minerals; Decomposition of ——. (P) Riedel A.-G. B257

Aluminium; Alloy flux for soldering ——. (P) Bolus B340
alloys:
(P) Archer and Jeffries B100*, B262*
(P) British Aluminium Co., and Gwyer B262
(P) Edwards, and Aluminum Co. of America .. B222
(P) Geyer B180
(P) Von Zeerleder, and Aluminium Ind. A.-G. .. B222
alloys; Castings of ——. (P) Jeffries and others B914
or its alloys. Coating ——. (P) Pacz, and Aluminum Co. of America B984
alloys; Comparative tensile properties of ——. Dix, jun., and Lyon B872
alloys; Constitution of ternary ——. Fuss B259
and its alloys; Determination of alkali metals in ——. Schürmann and Schob B299
alloys; Determination of cadmium in ——. Budgen B426
alloys; Determination of magnesium in ——. Fetkenheuer and Konarsky B791
and its alloys; Facing sheets or objects of —— with sheets of heavy metals. (P) Passalacqua B949
alloys; Increasing the electrical conductivity of ——. (P) Metallbank und Metallurgische Ges. B561
alloys; Manufacture of ——. (P) Goldschmidt A.-G. .. B914
and its alloys; Production of adherent metallic coatings on ——. (P) Erftwerk A.-G. B753
alloys for shell or cartridge cases. (P) Fahrenwald B1018
and its alloys; Tin-plating ——. (P) Passalacqua B600
amalgam. Hahn and Thieler B417
Analysis of industrial ——. Bertiaux B221
Annealing of ——. Röhrig B716
-beryllium alloys. (P) Metallbank u. Metallurgische Ges. B389
-bronze: Hardness of heat-treated ——. Comstock .. B791
-bronzes containing silicon. Guillet B135
-cadmium-zinc alloys. Budgen B873
Coating sheet steel with ——. (P) Peacock and Waldo .. B475
cooking utensils; Corrosion of ——. Tinkler and Masters B179
-copper alloys; Heat treatment of light ——:
Iytaka B520
Portevin and Le Chatelier B520
-copper alloys of intermediate composition. Stockdale .. B299
-copper alloys; X-ray studies on ——. Jette and others B299
-copper-magnesium alloys; Casting and heat treatment of ——. Daniels and others B792
-copper-magnesium alloys; Ternary ——. Ohtani .. B136
-copper-tellurium alloys; Properties and structure of ——. Sisco and Whitmore B791

Aluminium—*continued*.
Critical studies on methods of determining ——. Congdon and Carter B357
Detection of magnesium in ——. Hahn and others .. B928
Determination of —— in alloys. Brophy B872
Determination of —— in alloys and its separation from other metals. Jander and Weber B98
Determination of sodium in ——. Fairlie and Brook .. B872
Diffusion and solution of —— in copper. Bauer and Piwowarsky B59
Has pure —— a transition point? Honda and Igarasi .. B716
Improving commercial ——. (P) Rosenhain and Grogan B339
Increase in tensile strength of soft sheet —— after annealing B520
Influence of heat treatment on reactivity of ——. Röhrig and Borchert B1017
Influence of rapidity of cooling on properties of commercial ——. Guillet B750
Influence of silicon and iron on properties of ——. Czochralski B635
-magnesium alloys; Manufacture of powders of ——. (P) Sejournet B522
-magnesium; Electrical properties of the system ——. Mehl B835
-magnesium-silicon-zinc; Aluminium-rich mixed crystal region in the quaternary system ——. Sander and Meissner B259
Melting scrap —— and obtaining ammonia therefrom. (P) Starmann and others B793
Metallising porcelain and china with ——. (P) Kraus und Co. B944
-nickel-iron alloy stable to heat; Non-rusting ——. (P) Reissman B262
Non-metallic inclusions in ——. Lobley B473
Powder for soldering ——. (P) Rossi B388
Powder for use in welding, melting, and soldering ——. (P) Aluminium-Guss- u. Schweisswerk A.-G. B301
Precipitation of —— as hydrated oxide by means of ammonia. Jander and Weber B254
Production of metallic coatings on ——. (P) Niedersachsenwerke A.-G. B752
Production of protective coatings on —— by electrolysis. Günther-Schulze B635
Production of silicon and —— and other elements from clay, bauxite, etc. (P) Hooper B717
Recovery of —— from skimmings, dross, swarf, etc. (P) Tullis B100
Replacement of sodium and potassium from solutions of their salts by ——. Bergstrom B132
Separation of iron and —— from zinc, manganese, and nickel by the basic acetate method. Kling and Lassieur .. B540
Separation of zinc from iron and ——. Ardagh and Bongard B404
sheets; Thermal corrosion-resistance tests on thin —— in test-tubes. Mylius B426
-silicon alloys; Determination of silicon in ——. Oat .. B872
-silicon alloys; New ——. Edwards and Archer B949
-silicon alloys; Refining ——. (P) British Aluminium Co., and others B793
solder:
(P) Metallbank u. Metallurgische Ges. B301
(P) Rostosky B388
(P) Stumpf B793
Soldering ——. (P) Mumford and Butterworth B428
solders; Tests on ——. Bauer B178
Soluble —— and the hæmatoxylin test in filtered water. Hatfield B397
Tensile properties of —— at high temperatures. Martin .. B299
and titanium in solution in sulphuric acid; Separation of ——. Kayser B814
Utilisation of old metals containing ——. (P) Leroux .. B475
Volumetric determination of —— in aluminium salts, in particular in *liquor aluminii acetici*. Wohlk B54
-zinc alloys. Tanabe B872
-zinc alloys containing cadmium; Mechanical properties of ——. Budgen 273T, B791
-zinc alloys; Properties of ——. Bauer and Heidenhain .. B635
-zinc alloys; Shrinkage of ——. Bauer and Heidenhain .. B520

Aluminium acetate; Electrolytic manufacture of ——. (P) Cruso B467

Aluminium-alkali fluorides; Production of double —— technically free from iron. (P) Chem. Fabr. Griesheim-Elektron .. B869

Aluminium alkali silicates; Hydration of solid ——. (P) Permutit A.-G., and Schüler B294

Aluminium chloride; Adsorption of —— by hide powder. Kubelka and others B225
Catalytic effects of ——. Preparation of triphenylmethane etc. Norris B277
Distilling oil with ——. (P) McAfee, and Gulf Refining Co. B166
Manufacture of ——:
(P) Gray and others B1012
(P) Hall, and Texas Co. B870
Manufacture of pure alumina and ——. (P) Pedemonte .. B557
Manufacture of sodium silicate and ——. (P) Peacock and Waldo B942
Mixing and delivering oil and ——. (P) King, and Gulf Refining Co. B166
Preparation of —— from clay. Budnikoff B292
Production of —— from carbonaceous shales and like material. (P) Wolcott, and Texas Co. B830*

Aluminium compounds for sizing paper. (P) Bishop B334

Aluminium formate; Manufacture of ——. (P) Wolffenstein .. B578*
Production of solutions of ——. (P) Mendel A.-G. .. B891

PAGE

Aluminium hydroxide. Hahn and Thieler B417
Adsorption of —— from aluminium sulphate solutions by cotton and wood cellulose. Schwalbe B372
gels; Hydroxides and their hydrates in the different ——. Willstätter and Kraut B745
Manufacture of ——:
(P) Buchner B512*
(P) Muth B829
suspensions; Stability of ——. Sen B941
Aluminium nitride; Action of high temperatures on ——. Matignon B93
Presence of carborundum in certain crystals of ——. Matignon B510
Aluminium oxide. Hahn and Thieler B417
Catalytic actions of nickelised hydrated ——. Zelinsky and Kommarewsky B445
gel and sol. Lottermoser and Friedrich B510
Plastic masses with ——. Ruff and Goebel B748
See also Alumina.
Aluminium oxides; Hydrated —— poor in water. Willstätter and Kraut B254
Aluminium potassium silicates; Utilisation of ——. Montemartini and Losana B139
Aluminium sulphate; Manufacture of —— from bauxite, kaolin, etc. (P) Schumacher B294
Manufacture of crystalline ——. (P) Scofield and La Rue .. B788
Aluminous minerals; Decomposition of ——. (P) Hess .. B334
Alums. Müller B1011
Alumium cathodes; Platinised —— in electro-analysis. France and Eckert B813
Amalgams; Hardness of ternary silver-tin ——. Tammann and Mansuri B300
of tin, lead, zinc, cadmium, and copper; Hardness of ——. Tammann and Mansuri B300
Use of liquid —— in volumetric analysis. Someya B968
Amides of alkylated acids; Manufacture of ——. (P) Meister, Lucius, und Brüning B493*
Manufacture of alkali ——. (P) Ewan B980
Amines; Catalytic preparation of ——. Briner and others .. B367
and formaldehyde; Manufacture of condensation products of aliphatic —— for use as vulcanisation accelerators. (P) Shepard and others B35, B1020
Identification of ——. Marvel and Smith B199
Inactivation of invertase by ——. Myrbäck B307
Manufacture of chlorinated ——. (P) Durand et Huguenin B769
Preparation of alkylated ——. (P) Chem. Fabr. Weiler-ter Meer B400
Preparation of aromatic ——. (P) Bayer und Co. .. B808
Preparation of primary, secondary, and tertiary ——. (P) Kindler B890
Production of derivatives of primary aromatic —— containing sulphur and selenium. (P) Meister, Lucius, u. Brüning B617
secondary; Preparation of —— from the corresponding N-nitroso-derivatives and their nuclear substitution products. (P) Akt.-Ges. für Anilin-Fabr. B355
Amine groups; Titration of carboxyl and —— in amino-acids etc. in aqueous solution. Harris B74
groups; Titration of carboxyl groups and —— in amino-acids, polypeptides, etc. Harris B203
Aminoacetophenones as colour intermediates. Morgan and Moss B86
Amino-acids; Action of sulphuric acid on some ——. Kronacker B691
Behaviour of formaldehyde in titration of ——. Tarugi .. B444
Biochemical method for resolving racemic ——. Hoppert B768, B1029
Determination of —— in presence of ammonium salts. Fernandez and Garmendia B399
in nutrition. Proline indispensable for growth. Sure .. B571
Salting-out of ——. Pfeiffer and Angern B312
Titration of amino and carboxyl groups in ——. Harris .. B293
Titration of amino and carboxyl groups in —— in aqueous solution. Harris B74
Use of quinhydrone electrode for determination of ——. Harris B203
Aminoalkyl derivatives of quinoline; Preparation of ——. (P) Loewe B448
1-Aminoanthraquinone; Preparation of ——. Kniatowna .. B412
Aminoazo compounds; Preparation of ——. (P) Bayer und Co. B413
m-Aminobenzaldehyde; Preparation of ——. (P) Bissell, and National Aniline and Chemical Co. B808
p-Aminobenzoic acid aminoethanol and aminopropanol esters; Relation between pharmacological action and chemical constitution of ——. Schmitz and Loevenhart B996
Relation between chemical constitution and local anæsthetic action in N-alkylleucinol esters of ——. Graf B443
p-Aminobenzoyl derivatives of 2-methyl-4-diethylaminopentanol-5 and 2-methyl-4-dimethylaminopentanol-5; Preparation of ——. (P) Chem. Fabr. Flora B615
Aminobenzoylaminonaphthalenesulphonic acids; Carbamides of ——. Chemotherapeutical researches in the 205 Bayer series. Fourneau and others B399
p-Aminobenzoyldi-isopropylaminoethanol hydrochloride; Local anæsthetic action of cocaine, procaine, butyn, and ——. Schmitz and Loevenhart B996
o-Aminocarboxylic acids of the benzene series; Manufacture of ——. (P) Kalle und Co. B329

PAGE

Aminohydroxynaphthalenesulphonic acids; Preparation of derivatives of —— containing sulphur. (P) Chem. Fabr. Weiler-ter Meer B413
Aminonaphthalenesulphonic acids; Preparation of derivatives of —— containing sulphur. (P) Chem. Fabr. Weiler-ter Meer B413
1.8.3.6-Aminonaphtholdisulphonic acid; Manufacture of ——. (P) Poma and Pellegrini B462
2-Amino-5-naphthol-7-sulphonic acid. Battegay and Wolff .. B48
Monoazo colouring matters prepared from ——. Battegay and Wolff B86
Aminoperylenequinones; Manufacture of ——. (P) Pereira .. B781
Aminophenol ethers; Basic derivatives of ——. (P) Ges. für Chem. Ind. in Basel B450
m-Aminophenol salts of *a*- and *β*-naphthalenesulphonic acids. Forster and Keyworth 302T
p-Aminophenol and its compounds; Preparation of ——. (P) Thatcher B808
Manufacture of ——. (P) Poma B551
Nitro-derivatives of ——. Girard B730
Preparation of derivatives of ——. (P) Theimer and Steward B732
Preparation of iminodiacetic acid derivatives of ——. (P) Kalle und Co. B440
Aminophenols; Summary of researches on nitration of derivatives of *p*- and *m*- ——. Reverdin B935
p-Aminophenoxyacetic acid; Nitro-derivatives of ——. Girard B730
Aminophenylarsonic acids; Commercial preparation of ——. (P) Guérin B447
Aminopropyl alcohols; Esters of ——. (P) Bayer und Co. .. B115
2-Aminopyridine; Preparation of homologues of ——. (P) Chem. Fabr. Schering B891
4-Aminoquinolines and derivatives arylated in the 2-position; Preparation of ——. (P) Chem. Fabr. Schering .. B354
2-Aminothiazoles from poison gases as dyestuff intermediates. Bogert and Chertcoff B1006
2-Amino-*p*-xylene; Chlorination of ——. Wheeler and Morse B1006
Ammonia; Apparatus for carrying out highly exothermic catalytic reactions between gases, particularly catalytic oxidation of —— with oxygen. (P) Cederberg and Bäckström .. B257*
Apparatus for catalytic production of synthetic ——:
(P) Casale B979
(P) Casale, and Casale Ammonia Co. B217
Apparatus for synthesis of ——. (P) Fauser B506
Bromometric determination of ——. Mauchot and Oberhauser B252
-carbon-hydrogen cyanide-hydrogen equilibrium. Badger .. B940
Catalysts for oxidation of ——. Scott B171
Catalytic alkylation of ——. Brown and Reid B065
Catalytic oxidation of —— by air in contact with pure palladium. Decarrière B214
Catalytic oxidation of —— to nitrous gases and nitric acid. Kassner B744
in coke-oven gas; Fixing —— by means of calcium sulphate. Tunius B285
content of coal; Recovering the ——. (P) Torrey, jun., and Semet-Solvay Co. B502
Conversion of synthetic —— into solid ammonium chloride in conjunction with production of sodium carbonate. (P) Claude, and L'Air Liquide B335,* B468*
Determination of —— by means of sodium hypobromite. Donald B744
Determination of —— in nitrogenous material. Shedd .. B998
equilibrium. Larson and Dodge B131
equilibrium at high pressures. Larson B376
Explosion of —— with electrolytic gas and oxygen. Partington and Prince B1011
Influence of temperature on decomposition of —— by ultra-violet light. Kuhn B202
liquor; Evaporating apparatus for ——. (P) Marquard and Littler B511
Manufacture of ——:
(P) Cederberg, and Norsk Hydro-Elektrisk Kvaelstofaktieselskab B57*
(P) Halvorsen, and Norsk Hydro-Elektrisk Kvaelstofaktieselskab B632
(P) Nelson B829*
Manufacture of —— from calcium cyanamide. (P) Ehrlich, and Stickstoffwerke A.-G. Ruse B294
Manufacture of —— from the nitrogen of the air. (P) Nelson B333
Manufacture of —— from products containing alkali cyanides and complex cyanides. (P) N.V. Stikstofbindingsind. "Nederland" B979
Means of electrically heating gases under pressure for use in catalytic production of ——. (P) Badische Anilin und Soda Fabr. B216
Modification of Nessler-Folin reagent for ——. Koch and McMeekin B854
Obtaining —— from scrap aluminium. (P) Starmann and others B793
oxidation gases; Recovery of nitrogen from ——. (P) Fauser B420
Oxidation of —— by micro-organisms under different conditions. Gowda B346
Oxidation of —— by permanganate. Kolthoff B866
oxidation; Studies on catalysts for ——. Inaba B416
Preparation of pure ——. Moser and Herzner B54
Production of —— from ammoniacal liquor. (P) Henrici, and Michael und Co. B943
Production of —— from carbonised fuels. (P) A.-G. für Brennstoffvergasung B124

Ammonia—*continued.* PAGE
Production of a mixture of carbon dioxide, nitrogen, and —— in connexion with manufacture of steel. (P) Arnold, and Nitrogen Corp. .. B671
production; Increasing —— with improved catalysts. Larson B939
Purification of —— previous to oxidation. (P) Bayerische Stickstoff-Werke A.-G., and Jost .. B943
Rapid and quantitative removal of —— from solutions. Stanford .. B203
Reaction of resorcinol and its application to detection of ——. Caseneuve .. B454
Recovering —— from gases or vapours. (P) Bone and Finch B975
recovery from gas. (P) Bird, and Koppers Co. .. B588
Recovery of —— from shale. (P) Cooper .. B665
in soils; Determination of ——. Bengtsson .. B1022
solutions; New determination of the specific gravities of ——. Price and Hawkins .. 113T, B417
stills; Purification of waste liquors from ——. (P) Wagner B112
Synthesis of ——:
(P) Arnold and others .. B419, B909*
(P) Casale .. B558*
(P) Clancy, and Nitrogen Corp. .. B420
(P) Claude, and L'Air Liquide .. B747*
(P) Harter and Oehlrich .. B294
(P) Norsk Hydro-Elektrisk Kvaelstofaktieselskab .. B379
(P) Soc. Minière et Ind. Franco-Brésilienne .. B943
-synthesis autoclave. (P) Arnold and others .. B335*
-synthesis catalysts and their regeneration. (P) Clancy, and Nitrogen Corp. .. B420
Synthesis of —— at high pressures. Moldenhauer .. B465
Synthesis of —— at high temperatures. Moldenhauer .. B252
synthesis; Manufacture of catalysts for ——:
(P) Clancy, and Nitrogen Corp. .. B56
(P) Larson and Lamb .. B557, B1013
(P) Urfer .. B256, B632
synthesis; Purifying gases for ——. (P) Cederberg, and Norsk Hydro-Elektrisk Kvaelstofaktieselskab .. B217
Synthesis of —— under very high pressure. Claude .. B710
-water; Freezing-point curve of the system. ——. Elliott .. B827
Ammonia-soda process; Operation of the —— in connexion with the manufacture of steel. (P) Arnold, and Nitrogen Corp. .. B671
process; Production of pure ammonium chloride in the ——. (P) Badische Anilin und Soda Fabr. .. B467, B512
process; Third form of the ——. Fedotieff and Kolossoff .. B14
Production of ——. (P) Glund, and Ges. für Kohlentechnik B421
Ammoniacal liquor; Distillation of ——:
(P) Cabrier .. B589
(P) South Metropolitan Gas Co., and others .. B711
liquor; Treatment of effluent spent liquors from distillation of —— .. B623
nitrogen; Determination of ——, especially in proteins and their hydrolysis products. Froidevaux .. B38
Ammonium bases; Intensity of action on nerve endings of various substituted quaternary aliphatic ——. Külz .. B766
Ammonium; Crystal precipitation reactions of ——. Rosenthaler B851
as a reducing agent. Schlubach and Miedel .. B965
Ammonium bicarbonate; Application of —— as a fertiliser. Glund B395
Ammonium bisulphite; Manufacture of ——. (P) Buchner .. B17
Ammonium carbamate equilibrium. Briggs and Migrdichian .. B1011
Ammonium chlorate as explosive. Naoum and Aufschläger .. B850
Ammonium chloride; Alternate precipitation of sodium bicarbonate and ——. (P) Claude, and L'Air Liquide .. B380*
lyes; Treating —— in iron vessels. (P) Henkel und Co., and Weber .. B256, B256, B333, B379
Manufacture of —— *e.g.*, from coke-oven gas. (P) Frankfurter Gas-Ges., and Bürger .. B294
Preparation of sublimed ——. (P) Chem. Fabr. Teterow, and Siegel .. B633
Production of —— from hot ammoniacal distillation gases. (P) Christensen .. B975
Production of pure —— in the ammonia-soda process. (P) Badische Anilin und Soda Fabr. .. B467, B512
Production of potassium nitrate and ——. (P) De Haën .. B420
Protecting iron apparatus from action of solutions of ——. (P) Badische Anilin u. Soda Fabr. .. B788
Recovery of —— from mother liquors of ammonia-soda process. (P) Rhenania Ver. Chem. Fabr. A.-G., Zweigniederlassung Mannheim, and others .. B294
Recovery of —— from solutions containing sodium chloride. (P) Rhenania Ver. Chem. Fabr., Zweigniederlassung Mannheim, and others .. B133
Separating —— from finely ground mixtures with other salts. (P) Glund and others .. B712
Steel alloys having high resistance against corrosion by solutions of ——. (P) Krupp A.-G. .. B60
Treating dross containing ——. (P) Michael und Co. .. B420
Ammonium compounds; Manufacture of —— for use as fertilisers. (P) West and Jaques .. B607, B882*
Ammonium nitrate; Analysis of crystalline deposits from solution in fused ——. Perman and Dawkins .. B710
Explosibility of ——. Aufschläger .. B279
Explosibility of —— and of its mixtures with other salts. Naoum and Aufschläger .. B538
as an explosive. Cook .. B850
explosives. *See under* Explosives.
The reciprocal salt pair sodium sulphate and ——. Perman and Harrison .. B292
Ammonium perchlorate as explosive. Naoum and Aufschläger .. B850
Ternary and quaternary equilibria in the system, sodium perchlorate and sulphate, ammonium sulphate, water, and ——. Freeth .. B377
Ammonium persulphate; Electrolytic preparation of ——. Salauzo B172
Ammonium picramate; Manufacture of ——. (P) Dehn .. B77
Ammonium salts; Determination of amino-acids in presence of ——. Fernandez and Garmendia .. B309
salts; Manufacture of ——. (P) Sundahl and Christenson .. B1013*
salts; Quantitative determination of ——. Lövgren .. B978
salts; Volumetric determination of ——. Auger .. B417
Ammonium sulphonitrate; Fertilising value of ——. Graftiau and Hardy .. B990
Ammonium sulphate; Caking of ——. Richardson .. B14
Manufacture of —— from calcium sulphate, ammonia, and carbon dioxide. (P) Badische Anilin u. Soda Fabr. .. B95
Manufacture and neutralisation of ——. Bateman .. B594
manufacture; Plant used in ——. Stonier .. B214
Manufacture of pure, anhydrous alkali sulphates and ——. (P) Bambach .. B633
Neutralising ——. (P) Nicholson .. B217
saturator; Physical conditions in the ——. Lowe .. B660
Ternary and quaternary equilibria in the system, sodium perchlorate and sulphate, ammonium perchlorate, water, and ——. Freeth .. B377
Ammonium sulphate-nitrate; Chemical and physical properties of Oppau ——. Robertson and others .. B494
Experiments to determine whether Oppau —— possesses explosive properties. Rotter .. B494
Ammonium sulphide group of metals; Determination of —— by means of hydrogen sulphide under pressure. Moser and Behr .. B618
group; Simplified qualitative analysis of the ——. Rupp .. B235
Recovery of sulphur and —— from solutions. (P) Badische Anilin u. Soda Fabr. .. B294
Ammonium sulphite; Manufacture of ——. (P) Elektrizitätswerk Lonza .. B293
Oxidation of —— by means of gases containing oxygen. (P) Elektrizitätswerk Lonza .. B596
Amygdalin; Determination of hydrogen cyanide content of —— by the aeration method. Roe .. B512
Synthesis of ——:
Campbell and Haworth .. B691
Kuhn and Sobotka .. B963
Zemplén and Kunz .. B924
Amygdalin-biose; Identity of gentiobiose with ——. Haworth and Wylam .. B190
Amyl alcohol; Purification of ——. (P) Willkie, and U.S. Industrial Alcohol Co. .. B529
Amylaceous substances; Malt flour, and the practice of digestion of cooked and uncooked ——. Lecoq and Wary .. B958
substances; Simultaneous production of demineralised —— and lower nitrogenous matter for food purposes from tubers or cereals. (P) Boldin and Effront .. B922*
n-Amylaniline. Radcliffe and Grindley .. B861
Amylase. Sjöberg and Eriksson .. B921
Anti- ——. Lüers and Albrecht .. B958
Degradation of starch by animal ——. Holmbergh .. B306
of germinated barley; Effects of electrolysis on ——. Maignon B227
Influence of temperature on the saccharifying power of ——. Chrzaszcz .. B109
malt-; Hydrolytic power of —— from different cereals, and re-activation of amylase inactivated by heat. Chrzaszcz .. B761
of malt-; Inactivation of —— by heat and radiation. Lüers and Lorinser .. B306
malt-; Iso-electric point of ——. Sherman and others .. B724
of potatoes. Haehn and Schweigart .. B191
preparation with limited powers of hydrolysis. Sjöberg .. B28
Amylases; Action of potassium iodide on saccharification of starch by various ——. Holmbergh .. B395
Influence of hydrogen-ion concentration on action of certain ——. Groll .. B1024
Limiting hydrolysis of starch and a complement of the ——:
Pringsheim and Beiser .. B843
Pringsheim and Schmalz .. B28
Amyloclastic enzymes. *See under* Enzymes.
Amylopectins prepared from different starches. Samec and others B608
Amylose; Autolysis of ——:
Biedermann .. B145
Rothlin .. B145
Anacardium occidentale; Fatty oil of seed of ——. West and Cruz .. B23
Anæsthetic action; Relation between chemical constitution and local —— in N-alkylleucinol esters of *p*-aminobenzoic acid. Graf .. B443
compounds. (P) Volwiler and others .. B200
gases; Experiments with ——: propylene, methane, and dimethyl ether. Brown .. B889
properties of *p*-aminobenzoyldi-isopropylaminoethanol hydrochloride (isocaine), cocaine, procaine, and butyn; Local ——. Schmitz and Loevenhart .. B996
Anæsthetics; Pressor ——. Marvel and Du Vigneaud .. B887
Analgesic compounds; Hypnotic and ——. (P) Volwiler, and Abbott Laboratories .. B233
Analgesics; Preparation of ——. (P) Merck and Co. .. B448
Analysis; New methods of volumetric ——. Jellinek and Kühn B853, B853
New methods of volumetric ——. Chlorometry as a substitute for iodimetry and other analytical methods. Jellinek and Krestoff .. B892
Quantitative chemical —— by means of X-rays. Stintzing .. B316
Volumetric method of elementary ——. Hackspill and D'Huart .. B771

pigments. Coffignier .. B798
Antimony sulphide; Production of precipitated ——. (P) Mullon and Bishop .. B711
Antimony sulphides and thio-salts; Electrolytic preparation of ——. Tocco .. B255
Antimony trichloride; Use of —— for volumetric determination of hypochlorites, ferricyanides, and ferrocyanides. Feigl and Schummer .. B710
Antineuritic factor. *See* Vitamin B.
substance in yeast; Action of nitrous acid upon ——. Peters B984
Anti-oxidation and fastness to light of dyes on the fibre. Sisley .. B53
Anti-oxygenisers; Application of —— for increasing the fastness to light of dyestuffs on the fibre. Gillet and others .. B13
Anti-oxygenising action and autoxidation. Catalytic properties of sulphur and its compounds. Moureu and others .. B1028
Antipyrine; Compound of —— with trichloroacetic acid. Debucquet B846
Detection of metals as double halides with ——. Kolthoff and Hamer .. B968
See also 1-Phenyl-2.3-dimethyl-5-pyrazolone.
Antirachitic action of certain oils. Shipley and others .. B444
Antiscorbutic factor; Alleged specific colour reaction for the ——. Kay and Zilva .. B195
factor; Differential dialysis of the ——. Connell and Zilva .. B726
factor. *See also* Vitamin C.
preparations; Conservation of potency of concentrated ——. Zilva .. B340
preparations; Reducing properties of ——. Connell and Zilva.. B726
value of fresh and canned English tomatoes. Delf .. B726
Antiseptic action of benzoic acid, salicylic acid, cinnamic acid and their salts. Waterman and Kuiper .. B534
action of compounds of the apocyanine, carbocyanine, and isocyanine series. Browning and others .. B691
power of potassium bichromate and copper bichromate. Sartory and Sartory .. B442
Antiseptics. (P) Quine .. B729*
Comparison of activities of —— on bacteria and on leucocytes. Fleming .. B490

PAGE

Antiseptics—*continued*.
Organic bismuth compounds for use as ——. (P) Bally, and Haco-Ges. B667
Regular and irregular ——. Richet B112
Antispasmodic compounds; Production of ——. (P) Engels, and Merck and Co. B493
Antitoxins; Process for making clarified serum ——. (P) Henley .. B115
Stable preparations from —— suitable for internal use. (P) Wintsch B812
Apigenin; Flavylium salts related to ——. Pratt and others .. B247
Apocyanines. *See under* Quinoline dyestuffs.
Apoharmine; Synthesis of ——. Lawson and others.. .. .. B442
Apothesine; Comparative toxicity of novocain, neocain, procain, and ——. Meeker and Frazer B276
Apple scald; Oiled wrappers, oils and waxes in control of ——. Brooks and others B397
wood; Determination of hemicellulose in ——. Tottingham and Gerhardt B249
Apples in storage; Physiological studies on ——. Magness and Diehl B397
Apparatus; Modifications in laboratory ——. Patterson 281T
Apricot-kernel oil. *See under* Oils, Fatty.
Apricots; Non-volatile acids of dried ——. Nelson B1026
Arachis oil. *See under* Oils, Fatty.
Aragonites; Active agents in luminescent ——. Tanaka B466
Aralkyl compounds; Manufacture of ——. (P) Dreyfus B850*
N-Aralkyl-derivatives of iminazolylalkylamines; Preparation of ——. (P) Gerngross B812
Arghan fibre. Bunting B741
Arginine; Preparation and quantitative determination of ——. Kossel and Gross B615
Relation of —— to growth. Rose and Cox B1026
Argon; Purification of ——. (P) Jones, and Westinghouse Lamp Co. B217
Separation of —— from air. (P) L'Air Liquide B379
Aromatic compounds; Manufacture of ——. (P) Dreyfus B850*
compounds; Thermal treatment of ——. Fischer and others .. B287
Arsenate ores; Treatment of native ——. (P) Lamb, and American Smelting and Refining Co. B829
Arsenated N-arylamino-alcohols. Hamilton B199
Arsenates; Manufacture of —— from speiss. (P) Linville, and American Smelting and Refining Co. B870
Arsenic; Apparatus for determination of ——. Hünerhein B695
Chemistry of Reinsch test for ——. Evans B37
content of musts and influence of addition of sulphur on elimination of arsenic during fermentation. Schätzlein B649
Detection of —— in drugs and chemicals. Cribier B113
Determination of ——. Hackl B580
Determination of —— in organic compounds. Kircher and Von Ruppert B80
-free reagents; Preparation of ——. Beal and Sparks B417
Micro-volumetric determination of antimony, iron, and ——. Brukl B202
in organic substances; Micro-determination of ——. Lieb and Wintersteiner B970
in pharmaceutical arsenical preparations; Bromometric determination of ——. Rupp and Siebler B614
and phosphorus; Separation of —— from mixtures. (P) Michael und Co. B944, B944
-phosphorus smoke developers; Production of arsenic trioxide and phosphorus pentoxide from ——. (P) Chem. Fabr. Griesheim-Elektron B829
-phosphorus smoke developers; Utilisation of ——. (P) Chem. Fabr. Griesheim-Elektron B36
in pyrites, sulphuric acid, and hydrochloric acid; Determination of ——. Mayr B865
Recovery of —— from metallurgical dusts. (P) Parsons and Bassett B950
Red ——. *See* Arsenic disulphide.
Removing —— from iron ores. (P) Schumacher B751
Separation of ——. Blunt B156
Separation of —— from antimony and tin. Strecker B202
Separation of iron, copper, nickel, zinc, and —— by precipitation with calcium carbonate and hydroxide. Schopper .. B178
Separation of mercury and ——. Wenger and Schilt .. B970
Separation of tin and —— in presence or absence of antimony. (P) Harris B522
Solubility of mercuric sulphide in ammonia and its influence on detection of ——. Ghigliotto B38
Use of bromine for volumetric determination of ——. Prescher B318
Use of lead cathode in electrolytic method for determination of minute quantities of ——. Callan 168T, B970
White ——. *See* Arsenic trioxide.
Arsonic acid; Manufacture of ——. (P) Behse B558
Reduction of —— by sulphurous acid in presence of vanadic acid. Auger and Odinot B172
Arsenio-antimony compounds; Preparation of organic ——. (P) Chem. Fabr. von Heyden B809, B810, B810
Arsenic compounds; Manufacture of organic ——:
(P) Adams and Johnson B896
(P) Albert, and Roessler and Hasslacher Chemical Co. B77
(P) Margulies B966
Arsenic disulphide; Reaction between lime and ——. Atkin and others B880
Arsenic trioxide; Influence of mercury and other impurities on rate of oxidation of —— by nitric acid. Smith and Miller B1012
Production of phosphorus pentoxide and —— from arsenic-phosphorus smoke developers. (P) Chem. Fabr. Griesheim-Elektron B829
Vapour pressure of ——. Smellie B92

PAGE

Arsenical composition for preparation of a sheep dip; Dry ——. (P) Pratt B804
preparations for exterminating or keeping down pests; Manufacture of ——. (P) Vogel B995
therapeutic preparations; Manufacture of ——. (P) MacEwen B966
Arsenious acid; Solubility of —— in beverages. Goy and Wende B571
Titration of —— with permanganate. Kolthoff B695
Arsenious chloride; Distillation of antimonious chloride, stannic chloride, and ——. Böttger B378
Arsenious oxide. *See* Arsenic trioxide.
Arsenious sulphide sludges; Treatment of —— for separation of the sulphide. (P) Jordan B173
Arsenite; Reaction between permanganate and —— in alkaline solution. Feigl and Weiner B852
Arsenites; Manufacture of alkali ——. (P) Henkel and Meyer .. B257
Arsenobenzene derivatives. Contardi and Cazzani B653
derivatives; Manufacture of ——. (P) Meister, Lucius, und Brüning B537
derivatives stable in solution; Preparation of ——. (P) Meister, Lucius, u. Brüning B856*
Arsenobenzenes; Determination of arsenic in ——. De Myttenaere B32
Arseno-compounds of the pyrazolone series; Manufacture of ——. (P) Streitwolf and Metz B927*
Arsphenamine. *See* Salvarsan.
Artemisia herba alba; Probable presence of thujone in essential oil of ——. Allnari B536
Artists' colours; Difference between oils of linseed and poppy seed groups as vehicles for ——. Eibner and Wibelitz .. B641
Arylamine salts of benzeneaminonosulphonic acid. Keyworth .. 341T
salts of 2.6- and 2.7-naphthalenedisulphonic acids. Forster and Keyworth 165T, B936
salts of α- and β-naphthalenesulphonic acids. Forster and Keyworth 299T, B936
Errata 314T
N-Arylamino-alcohols; Arsenated ——. Hamilton B199
2-Aryl-4-aminoquinolines; Preparation of ——. (P) Chem. Fabr. Schering B354
Arylbiguanides; Properties of ——. Callan and Strafford .. 5T
Arylguanidines; Properties of ——. Callan and Strafford .. 3T
Aryloxynaphthylketones; Manufacture of ——. (P) Soc. of Chem. Ind. in Basle B88*
Asbestos cement compositions; Manufacture of ——. (P) Lanhoffer and Lanhoffer B383
materials; Treatment of ——. (P) Exportingenieure für Papier und Zellstofftechnik B135
or its products impregnated with rubber latex; Manufacture of ——. (P) Russell and Broomfield B880
Ash; Determination of —— by the aid of oxygen. Wetselaar .. B319
Determination of fusibility of ——. Mertens B623
Ashes; Pneumatic separation of coke from ——. (P) Arpin .. B361*
Production of building material from ——. (P) Nove-Mörtel Ges. B945
Use of fuel —— in production of cement. (P) Rheinisch-Westfälische Sprengstoff A.-G. B517
Ashpit waste of coal-burning furnaces; Machine for sorting ——. (P) Fauquet A7
Aspergillus oryzae; Constitution of kojic acid, a γ-pyrone derivative formed by —— from carbohydrates. Yabuta B443
Asphalt; Constitution of ——. Nellensteyn B162
Determination of —— in lubricating oils. Evans B6
emulsions; Manufacture of ——. (P) Kirschbraun B210
-limestone; Manufacture of artificial ——. (P) Zimmer and Fränkl B258
Manufacture of ——. (P) Building Accessories and Flooring Co., and others B384
Manufacture of coloured ——. (P) Building Accessories and Flooring Co., and others B384
Manufacture of synthetic mineral ——. (P) Sanders .. B749
for mineral-surfaced roofing; U.S. Government specification for —— B714
paints; Relation of acidity to jellying of ——. Fisher .. B566
primer for roofing and waterproofing; U.S. Government specification for —— B714
Production of colloidal dispersions of ——. (P) Plauson's Forschungsinst. B327, B503
Removal of —— from mixtures of hydrocarbons. (P) Neumann B48
Treatment of Mexican —— by heating under pressure with sodium formate and with carbon monoxide and water respectively. Waterman and Kortlandt B898
for waterproofing and damp-proofing; U.S. Government specification for —— B858
Assam; Crude oils of ——. Wilson B701
Astralagus sinicus; Action of gases produced by decomposition of —— on the growth of the rice plant. Onodera .. B647
Preventing harmful action on the rice plant of gases produced by decomposition of ——. Onodera B647
Atmospheric compound for divers' use. (P) Cooke B73
gases; Solubility of —— in solutions of ammonium chloride. Coste and Andrews B398
Atomising fusible materials. (P) Meurer B718*
solids by shaking with liquids. Gurwitsch B117
Atractylis gummifera extract; Detection of —— in liquorice extract. Giuffrè B964
Atractylis ovata, Thunb.; New constituent of ——. Takagi and Hongo B924

H 2

PAGE
Atropine phosphates. Debucquet B197
Attraction; Physico-chemical force of ——. Preparation of colloidal solutions by atomisation of solids by shaking with liquids. Gurwitsch B117
Aurin. *See under* Triphenylmethane dyestuffs.
Austenite. *See under* Steel.
Australia; Plants of —— worthy of attention as sources of essential oils. Penfold B33
Autoclaves. (P) Erdöl- u. Kohle-Verwertung A.-G. B323
Operation of ——. (P) Gärtner B737
Autoxidation and anti-oxygenising action. Catalytic properties of sulphur and its compounds. Moureu and others .. B1028
Auxinones and the growth of green plants. Clark and Roller .. B484
Aventurine glazes. *See under* Glazes.
Azeotropy; Application of —— to preparation of organic compounds. Wuyts B615
Azine derivatives; Manufacture of ——. (P) Akt.-Ges. für Anilin-Fabr. B825
Azine dyestuffs:
Anilinoflavindulines derived from phenanthraquinone. Sircar and Roy B412
derived from acenaphthenequinone. Sircar and Guha .. B288
Manufacture of ——. (P) Soc. Anon. des Mat. Col. et Prod. Chim. de St. Denis, and others B505
Safranine dyestuffs for wool; Manufacture of ——. (P) Akt.-Ges. für Anilin-Fabr. B936
Azo dyestuffs:
Accelerating influence of —— in vulcanisation. Drakeley and others 238T, B683
Aminoacetophenones as intermediates for ——. Morgan and Moss B86
Chromic and cobaltic lakes of mordant ——. Morgan and Main Smith B934
Chromotrope 10B; Spectrophotometric analysis applied to ——. Appel and Brode B781
Columbia Yellow; Constitution of ——. Bogert and Bergeim B823
Congo colours; Commercial ——. Vaubel B412
Effect of isomerism on the colour of certain ——. Crossley and Renouf B368
Identification of insoluble —— on the fibre, and of azo pigments in substance. Rowe and Levin B704
Influence of sulphonic groups on colour of ——. Mealy .. B86
Influence of sulphur on the colour of ——:
Foster and Reid B823
Waldron and Reid B167
Intermediate products for making ——. (P) Soc. of Chem. Ind. in Basle B937
Manufacture of ——:
(P) Bayer und Co. B10*, B413, B414*, B628*, B862
(P) Chem. Fabr. Griesheim-Elektron B248, B248, B369, B592*, B824
(P) Green and others B289*, B369
(P) Meister, Lucius, u. Brüning B627
(P) Soc. of Chem. Ind. in Basle B329, B329*, B782*, B782*
Manufacture of acid ——. (P) Meister, Lucius, und Brüning B902
Manufacture and application of ——. (P) Soc. of Chem. Ind. in Basle B1008
Manufacture of blue tris- ——. (P) Bauer and others .. B705
Manufacture of —— capable of being chromed. (P) Soc. of Chem. Ind. in Basle B167, B370*
Manufacture of chromium compounds of ——. (P) Soc. of Chem. Ind. in Basle B168*
Manufacture of —— and of chromium compounds thereof. (P) Soc. of Chem. Ind. in Basle B328
Manufacture of —— containing chromium. (P) Soc. of Chem. Ind. in Basle B505
Manufacture of corinth-coloured to black ——. (P) Chem. Fabr. Griesheim-Elektron B505
Manufacture of dis- ——:
(P) Bayer und Co. B862
(P) Durand u. Huguenin A.-G. B551
(P) Joyce B781
(P) Joyce, and Chemical Foundation, Inc. B49
Manufacture of insoluble ——. (P) Chem.-Fabr. Griesheim-Elektron B628*
Manufacture of insoluble —— derived from acylacetyl compounds of diamines. (P) Chem. Fabr. Griesheim-Elektron B782*
Manufacture of pyrazolone ——:
(P) Geller, and National Aniline and Chemical Co. B1008
(P) Holliday and Co., and Stokes B211
(P) Markush, and Pharma-Chemical Corp. B1008
(P) Soc. of Chem. Ind. in Basle B552
Manufacture of pyrazolone ——, and of intermediate products. (P) Soc. of Chem. Ind. in Basle B412
Manufacture of tetrakis- ——. (P) Akt.-Ges. für Anilinfabr. B126, B592*, B741*
Phenanthraquinoneazo dyestuffs. Sircar and Roy B412
Preparation of —— from 5-chloro-2-amino-p-xylene. Wheeler and Morse B1006
Preparation of mono- —— from J-acid. Battegay and Wolff B86
Production of fast —— on the fibre. (P) Soc. of Chem. Ind. in Basle B1010
Production of —— on the fibre from arylamides of 2,3-hydroxynaphthoic acid. (P) Chem. Fabr. Griesheim-Elektron B708
Production of —— in substance or on the fibre. (P) Meister, Lucius, und Brüning .. .. B555]
Azo lake dyestuffs. (P) McAllister, and Du Pont de Nemours and Co. B10
Azocyanines. *See under* Quinoline dyestuffs.
Azoxybenzene; Separation of —— from carbazole by oil flotation. Traube and others B895

B

PAGE
Babcock milk analysis apparatus; Modification of ——. Pozzi-Escot B194
milk and cream test bottles; Use of waste alcohol in calibration of ——. Theron and Cutler B884
Bacilli, acid-fast; Growth-inhibiting effect of organic compounds towards ——. Schöbl B995
Bacillus from dairy wastes; *Flavobacterium suaveolens*, a new species of aromatic ——. Soppeland B960
Bacillus bulgaricus; Adaptation of —— to phenol. Michel B609
Bacillus felsineus; Product prepared from —— for retting vegetable substances. (P) Istituto Sieroterapico Milanese, and Carbone B11
Bac. granulobacter pectinovorum; Fermentation of pentoses by ——. Peterson and others B883
Proteolytic action of —— andi ts effect on the hydrogen-ion concentration. Peterson and others B883
Bac. subtilis; Action of —— on cotton. Trotman and Sutton .. 192T
Backhousia angustifolia; Essential oil of ——. Penfold B926
Backhousia citriodora; Essential oil of ——. Penfold B33
Backhousia myrtifolia; Essential oil of ——. Penfold B576
Bacteria; Behaviour of —— towards alkaloids. Green and Lonstein B490
in beverages; Effect of carbonation on ——. Donald and others B612
Biology of thiosulphate ——. Klein and Limberger B189
Comparison of activities of antiseptics on leucocytes and on ——. Fleming B490
Differential tests for members of colon group of ——. Koser .. B995
Differentiation of human and soil strains of aerogenes section of colon group of ——. Levine and Linton B613
Fermentation of salts of organic acids as an aid to differentiation of types of ——. Brown and others B1025
Latent fermenting powers of ——. Grey B610
Nutrition of ——. Whitehead B958
Production of phenol by ——. Sieke B147
Production of sulphotying ——. (P) Lipman B685
Radioactivity and nitrogen-fixing ——. Kayser and Delaval .. B722
Resistance of —— to heat. Dugdale 17T
Bacterial cultures; Optimum and limiting concentrations of hydrogen ions for ——. Cluzet and others B569
growth in enamel slip. Wahlin B382
soil preparation; Possibility of making a —— for non-legume crops. Makrinoff B346
Bactericidal action of quinones and allied compounds. Morgan and Cooper 352T
action; Selective ——. Cooper and Forstner B962
action of tellurium-β-diketones. Influence of chemical structure on bactericidal power. Morgan and others 304T, B351, B923
charcoal preparations; Production of highly ——. (P) Schoeller B578
value of perfumes. Bryant B765
Bactericides. (P) Bayer und Co. B534
Bacteriological media; Behaviour of dyestuffs in —— in water analysis. Stearn and Stearn B613
Bact. radicicola; Experiments with ——. Makrinoff B346
Badan root, a Siberian tanning material. Smetkin B758
Baeckea crenulata; Stearoptene occurring in essential oil of ——. Penfold and Morrison B576
Bagasse; Determination of sugar in —— by cold extraction. Nieboer B608
fibres; Preserving ——. (P) Munroe and Dahlberg B213
Furnace for liquid fuel and ——. (P) Almagro B163
Obtaining fibres from ——:
(P) Shaw B784
(P) Shaw and Dahlberg B784
Treatment of —— for extraction of cellulose. (P) McRae .. B506
Bakery products; Increasing the volume of ——. Mohs B396
Baking powder; Acid ingredient for ——. (P) Utz B572
processes and the like; Compound for use in connexion with ——. (P) Clark, and Glasgow and London Refining Co. .. B490*
tests; Method of procedure for experimental ——. Fitz .. B993
Balata and analogous vegetable resins; Manufacture of ——. (P) Hauser, and K. D. P., Ltd. B1020
Manufacture of ——. (P) Stutchbury, and K. D. P., Ltd. .. B918
Production of aqueous dispersions of ——. (P) Pratt B757
Ball mills. (P) Fasting B157
Balsams; Production of therapeutically active constituents of ——. (P) Boedecker B234
Bamboo; Treatment of —— for extraction of cellulose. (P) McRae B506
Bank vaults and similar structures; Lining plates for ——. (P) Mowery, and American Abrasive Metals Co. B301*
Barbituric acid compounds; Manufacture of ——. (P) Chem. Fabr. Schering B114
Barbituric acids; Manufacture of salts of CC-disubstituted ——. (P) Layraud B447
Barium; Critical study of methods of determining ——. Congdon and Fitzgerald B539
Electrometric determination of —— alone and in presence of calcium. Müller and Wertheim B734
Manufacture of alloys of strontium or —— with lead. (P) Kroll, and Metallbank u. Metallurgische Ges. B301
Separation of radium and ——. Chlopine B55
Volumetric determination of ——. Angelescu B202
Barium carbonate; Solubility of —— in water under high pressure of carbon dioxide, and properties of such solutions. Haehnel B867
Thermal effects on heating curve of —— in graphite tubes. Tammann and Grevemeyer B215
Barium chloride; Manufacture of ——. (P) Drefahl and others .. B632
Manufacture of —— from barium sulphate. (P) Budnikoff .. B596

PAGE
Barium cyanide; Manufacture of ——. (P) Deguide .. B746, B980*
Barium ferrites. Martin .. B867
Barium formate; Decomposition of ——. Fischer and others .. B536
Barium hydroxide; Continuous process for manufacture of ——. (P) Deguide .. B422*
Barium manganate; Solubility product of ——. Schlesinger and Siems .. B940
Barium oxide; Preparation of porous ——. (P) Rhenania Ver. Chem. Fabr., and Looser .. B747
  Production of intimate mixtures of —— with carbon deposited from methane at high temperatures. (P) Lentz .. B133
  Thermal effects on heating curve of —— in graphite tubes. Tammann and Grevemeyer .. B215
Barium peroxide; Manufacture of ——. (P) Stewart, and Laporte, Ltd. .. B829
Barium salts; Manufacture of soluble —— from residues from manufacture of barium sulphide. (P) Rhenania Ver. Chem. Fabr. A.-G. .. B632
Barium sulphate; Adsorption by freshly precipitated —— during and after its precipitation. Ghosh and Dhar .. B907
  Sedimentation of ——. Liesegang .. B102
  used in X-ray examination; Poisoning from ——. Dinslage and Bartschat .. B466
  See also Blanc fixe.
Barium sulphide; Manufacture of ——. (P) Kircheisen .. B943
Bark waste of Redwood; Manufacture of artificial silk from ——. Greenbaum .. B904
Barkhausen effect in silicon-steel. Tyndall .. B1015
Barks; Chemistry of ——. Feinberg and others .. B573
Barley; Determination of starch in ——. Ling and others .. B991
  Development of pentosans in —— during germination. Van Laer and Masschelein .. B271
  Dietetic value of —— as determined by its vitamin content. Southgate .. B958
  Effect of aeration upon development of —— in a heavy clay soil. Allison .. B394
  Effect of germination on the aleurone layer of ——. Bennion .. B884
  Effect of methyl and ethyl alcohols on growth of ——. Parl .. B1022
  Effects of electrolysis on amylase of germinated ——. Maignon B227
  Evolution of phosphorus during the course of germination of ——. Van Laer and Duvinage .. B191
  Experience with an apparently high-class foreign ——. Matthews B648
  Formation of alcohol during aerobic and anaerobic germination of ——. Lüers and Schmal .. B648
  Influence of a deficiency of potash on development of —— when manured with different amounts of sodium nitrate. Wiessmann .. B305
  Influence of nitrifying bacteria on growth of ——. Fred .. B1022
  Influence of soil, season, and manuring on quality and growth of ——. Russell .. B993
  Investigation of —— for vitamins B and C. Harden and Zilva .. B958
Base exchange; Coagulation of clay and phenomena of ——. Gallaly B1022
  -exchanging aluminosilicate; Production of potassium hydroxide solution with simultaneous formation of a highly basic ——. (P) Rhenania Ver. Chem. Fabr. A.-G., and Messerschmitt .. B204
  -exchanging compounds; Manufacture of ——:
    (P) Hilditch and others .. B16
    (P) Kobelt .. B691
  -exchanging material containing silica, alumina, and basic material Production of ——. (P) Permutit A.-G., and Schüler B204
  -exchanging material; Manufacture of ——. (P) Green .. B133
  -exchanging properties of glauconite; Improving the ——. (P) Spencer, and Permutit Co. .. B614
  -exchanging silicates; Manufacture of ——:
    (P) Lee, and Borromite Co. of America .. B16
    (P) Wherry .. B886
  -exchanging silicates; Regenerating ——. (P) Duggan, and Permutit Co. .. B1027
  -exchanging substances; Preparation of artificial ——. (P) Wilcox, and American Zeolite Corp. .. B729*
  -exchanging substances; Regeneration of —— especially in water-softening. (P) Morawe .. B845
Basic functions; Use of quinhydrone electrode for determination of ——. Harris .. B203
Bates; Determination of practical value of enzymic ——. Lepetit .. B481
  Enzymo ——. Wood and Pickard .. B683
  Laboratory testing of enzymic ——. Pickard .. B954
  Preparation of ——. (P) Jucker und Co. .. B919
  Preparation of —— from animal excrement and organs. (P) Fink B66
  Preparation of —— from the excrement of dogs and pigeons. (P) Göller und Kreglinger .. B66
Batik. *See under* Printing.
Bating agents. *See* Bates.
Baudouin test for sesamé oil. Gravenhorst .. B183
Bauer oil, the high-boiling residue from molasses fusel oil as a source of capric acid. Marvel and Hager .. B438
Bauxite cements; Manufacture of —— free from metallic impurities. (P) Patrouilleau .. B384
  Fused ——. Bigot .. B257
  and the like; Repeated use of same sodium carbonate for decomposing ——. (P) Rüsberg, and Rhenania Ver. Chem. Fabr. A.-G., Zweigniederlassung Mannheim .. B95
  as a polymerising agent. Dunstan and others .. 181T
  Production of aluminium, silicon, and other elements from ——. (P) Hooper .. B717
  as a refining agent for petroleum distillates. Dunstan and others 179T
  Technical use of —— in petroleum-refining. O'Brien .. 188T

"Bayer 205"; Constitution of ——. Fourneau and others .. B312
  series; Chemotherapeutical researches in the ——. Carbamides of the aminobenzoylaminonaphthalenesulphonic acids. Fourneau and others .. B399
Beans; Chemical and structural study of mesquite, carob, and honey locust ——. Walton .. B195
Becquerel rays; Photographic action of ——. Wälder .. B314
Beef; Treatment and storage of ——. (P) Linley .. B196
Beer analysis; Calculation of original percentage of extract in ——. Doemens .. B148
  Cause of haze produced in —— by addition of caramel. Delroisse B649
  Combination of carbon dioxide in ——. Lüers .. B348
  Determination of carbon dioxide in ——:
    Bode and Hembd .. B146
    Mueheldt .. B146
  Formation of fusel oil and influence of higher alcohols on quality of ——. Mumme .. B687
  Haze in export ——. Visez .. B192
  Influence of the mashing process and p_H on the composition of the wort and acidity of the ——. Windisch and Kolbach .. B1024
  Investigation of —— for vitamins B and C. Harden and Zilva .. B958
  Manufacture of ——. (P) Plesch .. B29
  Manufacture of protein-stable —— and relation of dextrin content to protein-stability. Visez .. B193
  Method of treating ——. (P) La Boor, and Chemical Equipment Co. .. B570
  wort; Effect of ammonium chloride upon growth of yeast and hydration of gluten in ——. Fulmer and others .. B922
  wort etc.; Colorimetric determination of hydrogen-ion concentration of ——. Hind .. B192
  worts; Apparatus for cooling ——. (P) Robinson .. B83*
  worts from mixed grists and slack malts. Ranken .. B348
Beeswax; Acids in ——. Gascard and Damoy .. B102
  Alcohols and hydrocarbons from ——. Gascard and Damoy .. B140
  Chemical composition of ——. Damoy .. B432
  Decomposition of ——. Mailhe .. B719
  Detection of glycerides in ——. Bourcet .. B431
  Methods of determination of specific gravity of ——. Utz .. B342
  substitutes; Manufacture of kneadable ——. (P) Von Boyen B681
Beetroot juice; Correlation between acidity and coagulable substances present in ——. Kryz .. B306
  juice; Preparation of ——. (P) Mathis .. B761
Beetroots; Philipp continuous process for extraction of juice from ——. Danckwerts .. B67
  and products therefrom; Nitrogenous constituents of ——. Von Lippmann .. B270
Bentonite; Sedimentation of ——. Coward .. B786
Benzaldehyde; Manufacture of ——. (P) Craver, and Barrett Co. B200
  Oxidising dibenzyl to ——. (P) Curme, and Carbide and Carbon Chemicals Corp. .. B770*
Benzene; Adsorption of —— by silica gel:
    (P) Somerville and Williams .. B860
    Williams .. 99T
  Chlorinating ——. (P) Meister, Lucius, und Brüning .. B246
  Continuous and fractional treatment of wash-oil containing ——. (P) Still .. B820
  derivatives containing carbon side-chains; Manufacture of ——. (P) Howards and Sons, and Blagden .. B577
  Examination of mixtures containing petroleum spirit, turpentine oil, and ——. Pritzker and Jungkunz .. B666
  and its homologues; Catalytic condensation of acetylene with ——. Reichert and Nieuwland .. B152
  Purification of —— by freezing. (P) Vita .. B328
  Solubility of —— in water. Milligan .. B818
  Sulphonation of ——. Harvey and Stegeman .. B781
  Vapour density of ——. Bürk .. B823
  See also Benzol.
Benzenemonosulphonic acid; Arylamine salts of ——. Keyworth 341T
Benzidine as reagent for aldehydes. Van Eck .. B33
  as reagent and as indicator for specific oxidation potential. Kolthoff .. B156
Benzidine benzenemonosulphonate. Keyworth .. 342T
Benzidine salts of 2.7- and 2.6-naphthalenedisulphonic acids. Forster and Keyworth .. 167T
Benzidine salts of α- and β-naphthalenesulphonic acids. Forster and Keyworth .. 300T
Benzine soaps. Thomson .. B248
  See also Petroleum spirit.
Benzoic acid; Oxidising dibenzyl to ——. (P) Curme, and Carbide and Carbon Chemicals Corp. .. B770*
  Removal of carboxyl groups from ——. Schrader and Wolter B575
  and its salts; Antiseptic action of ——. Waterman and Kuiper .. B534
  Subliming ——. (P) McKee .. B577
Benzol; Activated carbon and silica gel for recovering —— from gas. Urbain .. B737
  Apparatus for recovery of —— from gas. (P) Pfisterer .. B899
  Bromine titration test for impurities in ——. Alberti .. B975
  content of coal gas; Apparatus for measuring the —— in the works. Bürger .. B361
  content of gas; Determination of —— by means of active charcoal. Schmolke .. B242
  Determination of —— in coal gas or coke-oven gas by means of active charcoal etc. Fischer and Zerbe .. B700
  Determination of —— in illuminating gas and coke-oven gas by means of active charcoal. Berl and Wachendorff .. B546
  Determination of —— in illuminating gas by means of active charcoal. Gollmer .. B974
  in gas; Determination of —— by means of activated charcoal. Kattwinkel .. B6

PAGE

Benzol—*continued.*
hydrocarbons; Apparatus for distillation of —— from saturated wash-oil. (P) Still .. B48
Preparation of crude —— from saturated wash-oil. (P) Otto und Co. .. B459
Purification of crude ——. Dunkel .. B551, B860
Recovering —— from coal gas. (P) Aguilhon .. B286
Recovery of —— from coal gas by freezing. (P) Soc. des Hauts Fourneaux de Rouen .. B550
recovery plant; Cleansing the ——. Wysehall and Empson B666
recovery plant; Limitation of consumption of wash oil in a —— and cause of the thickening of the oil. Otto .. B242
recovery process; Raschig's ——. Neumann .. B408
recovery; Silica gel as an adsorbent for ——. Williams .. B931
recovery; Solubility and vapour-pressure of naphthalene in relation to ——. Bunte and Pippig .. B5
Refining ——. (P) V.L. Oil Processes, Ltd., and others .. B1006
refining; Apparatus for extraction and removal of resin from —— from solution in acid. (P) Still .. B780
Refining commercial ——. (P) Somerville and Williams .. B780
refining; Recovery of sulphuric acid from waste acid obtained in ——. (P) Laube und Menzen .. B16
refining; Resin-containing waste oils from ——. Kattwinkel B85
Treatment of —— to obtain a resin. (P) Deutsch-Luxemburgische Bergwerks- u. Hütten-A.-G., and Hilpert .. B411
wash-oil; Apparatus for distilling saturated ——. (P) Gerhard und Schumacher .. B626
wash-oil; Comparison of methods for debenzolising —— and recovery of wash-oil from blast-furnace tar. Whittaker B6
wash-oil; Direct cooling of ——:
(P) Goldschmidt and Ott .. B286
Werner .. B207
wash-oil; Direct and indirect cooling of ——. Klenstedt .. B700
wash-oil not requiring regeneration; Lignite paraffin oil, a ——. Thau .. B408
wash-oil; Thickening of ——. Kattwinkel .. B776
wash-oil; Treatment of tar for preparation of ——. Gruhike B623
wash-oil; Waste heat in debenzolising ——. Guillet .. B776
washer; Operation of a ——. Schumacher and Becker .. B897
washing; Final cooling of gas before ——. (P) Bruns .. B549
See also Benzene.
Benzopolymethylene compounds. Oxidative degradation of tetrahydronaphthalene and its substitution products to phthalonic acid and phthalic acid. Von Braun and others .. B32
4-Benzoylaminoacenaphthene. Morgan and Stanley .. 345T
Benzyl acetate; Preparation of ——. (P) Bayer und Co. .. B769
Benzyl cholate; Preparation of ——. (P) Gehe und Co., and Rumme .. B353
Benzyl esters of polybasic acids; Preparation of salts of acid — for use as antispasmodics. (P) Engels, and Merck and Co. B492
4-Benzyl-2-methylquinoline. Rosenhauer .. B781
Benzylphthalamidic acid; Preparation of alkali and alkaline-earth salts of ——. (P) Hoffmann-La Roche und Co. .. B77
Bergenia crassifolia. See Badan.
Bergius process for cracking oils with hydrogen under pressure. Kling .. B701
Berkefeld filter candle; Use of —— in filtering tanning solutions. Kubelka and Bělavski .. B528
filter candles; Cleaning ——. Kubelka .. B225
Beryllium-aluminium alloys. (P) Metallbank u. Metallurgische Ges. B389
Electrolytic production of ——. Hopkins and Meyer .. B473
Manufacture of metallic ——. (P) Dickinson .. B985
Metallurgy and alloys of ——. Engle and Hopkins .. B473
Betula lenta; True nature of the glucoside of methyl salicylate present in the fresh bark of ——. Bridel .. B924
Beverage products; Sterilising ——. (P) Andrews and others .. B651
Beverages; Contamination of —— with zinc. Sale and Badger .. B273
Effect of carbonation on bacteria in ——. Donald and others B612
of low alcohol content; Manufacture of ——. (P) Dolenz .. B487
Manufacture of ——. (P) Rottger and Chapin .. B1027
Solubility of arsenious acid in ——. Goy and Wende .. B571
Bichromates; Manufacture of ——. (P) Jouve and Helbronner .. B512*
Bidiphenylene-ethylene; Dyestuffs derived from ——. Kehrmann and Buffat .. B86
Bile acids and their alkali salts; Production of compounds of lecithin with ——. (P) Boehringer Sohn .. B927
acids; Preparation of colloidally soluble heavy-metal salts of ——. (P) Riedel A.-G., and Boedecker .. B890
Binary mixtures; Volumetric turbidity method for analysis of ——. Boglu .. B970
Binding granular and other substances which in their normal condition are incapable of being bound. (P) Jung .. B985
material for use in road-making and for analogous purposes. (P) Wake and Spence .. B210
Biological products; Preservatives for ——. (P) Zell and others .. B153
Bios; Fractionation of —— and comparison of bios with vitamins B and C. Lucas .. B1025
Multiple nature of ——. Fulmer and others .. B438
Bird-lime from halogen-substituted rubber. (P) Thieme .. B64
Bismuth; Activities of zinc, cadmium, tin, lead, and —— in their binary liquid mixtures. Taylor .. B137
amalgam; Use of liquid —— in volumetric analysis. Someya B968
-antimony alloys; Electrolytic preparation of ——. Mazzucchelli and Tonini .. B99
-cadmium alloys; Hardness of ——. Di Capua and Arnone .. B260
Colorimetric determination of small quantities of ——:
Cuny and Poirot .. B38
Laporte .. B38

Bismuth—*continued.*
Determination of ——:
Hanus and Jilek .. B255
Kürthy and Müller .. B772
Determination and separation of —— by methods based on hydrolysis. Luff .. B318
Determination of —— in wine. Seiler .. B486
Extension of Reinsch test for arsenic and antimony to ——. Evans .. B37
-lead alloys; Hardness of ——. Di Capua and Arnone .. B260
ores; Process of treating ——. (P) Darling, and Ellis-Foster Co. .. B100
Rapid electro-analytical separation of silver, copper, and —— by means of graded potentials. Lassieur .. B540
Rapid electrolytic determination of —— and its use in analysis of bismuth ores and products. Seel .. B751
Recovering —— from low-grade ores. (P) Forstaer .. B793
-tin alloys. Hardness of ——. Di Capua .. B426
Bismuth citrate; Composition of —— and its reactions with alkalis. Adams .. B807
Preparation of ——. Fabrègue .. B118
Bismuth compounds; Organic —— for use as dyes and antiseptics. (P) Bally, and Haco-Ges. .. B667
Bismuth mono-8-hydroxyquinoline; Preparation of ——. (P) Engels, and Merck and Co. .. B492
Bismuth oxide; Hydrated ——. Corfield and Woodward .. B807
Bismuth oxynitrate; Analysis of ——. Luce .. B1012
Examination and composition of ——. Corfield and Short .. B786
Bismuth salts; Manufacture of emulsions of ——. (P) Hoffmann-La Roche und Co. .. B576
salts; Reduction of —— by hydrazine hydrate. Hanus and Jilek .. B255
Bismuth tartrate; Preparation of ——. Fabrègue .. B118
Bismuth tartrates. Corfield and Adams .. B807
Bitumen and tar; Preparation of mixtures of ——. (P) Butler and Popham .. B900
Bituminous cement-aggregate composition. (P) Finley .. B749*
compositions. (P) Atherton .. B900
and like compositions. (P) Butler and Popham .. B676
materials; Condensing or fractionating the vapour mixture obtained from ——. (P) Metan Spolka z. ograniczona odpowiedzialnoscia .. B625
materials; Extraction of tar and gases from ——. (P) Klötzer B408
protective solutions. (P) Govan .. A1014
Black liquor produced in manufacture of sulphate pulp Treating ——. (P) Richter and others .. B13
Blackstraps. *See* Molasses.
Blanc fixe. Liesegang .. B102
Manufacture of ——. (P) Michael und Co. .. B756
Blast-furnace gas. *See under* Gas.
-furnace tar. *See under* Tar.
-heaters; Characteristics of air ——. Ellis and White .. B541
for metallurgical furnaces and the like; Oxygenated ——. (P) Van Nuys, and Air Reduction Co. .. B388
Bleaching action of hypochlorous acid. Trotman .. 240T, B939
and bucking fabrics and yarn in skein form. (P) Mohr and others .. B508
cellulose pulp. (P) Eble and others .. B11
Chlorinating fluids for ——. (P) Van Meter, and Justinian Caire Co. .. B291*
damage; Methylene Blue value as indicator of ——. Ristenpart B291
earths. *See under* Earths.
experiments. Kind .. B785
fibrous material of vegetable origin, cellulose, paper, and the like. (P) Hamburger and Kaesz .. B508
fibrous materials, *e.g.*, sulphite pulp. (P) Drewsen, and West Virginia Pulp and Paper Co. .. B742
and like operations; Agents for detersive scouring, ——. (P) Moseley .. B629
and like operations; Apparatus for ——. (P) Smethurst .. B333*
or like treatment of yarns in strands, loose material and the like. (P) Schlumpf .. B629
liquors; Bi-polar electrode electrolysers for production of ——. Hepburn .. B743
liquors and their bleaching action. Kauffmann .. B629
Preparing raw linen for ——. (P) Bochter .. B743*
process. Waentig .. B291
solutions; Production of ——:
(P) McMahon, and Mathieson Alkali Works .. B332
(P) McMillan, and Electro Bleaching Gas Co. .. B332
textile fabrics or like material. (P) Mate and Pickstone .. B508
textile fibres; Apparatus for ——. (P) Brandwood and others .. B129
textile materials; Vomiting kier for ——. (P) Jefferson .. B332
Treatment of yarns and fabrics composed of vegetable fibres previous to ——. (P) Mackenzie and others .. B905
of wood cellulose. Schwalbe and Wenzl .. B80
Bleaching powder; Action of carbon dioxide on ——. Ochi .. B131
Determination of available chlorine in ——:
Kertész .. B92
Rodt .. B172
Determination of chloride in ——. Nakamura .. B131
Determination of moisture in ——. Ochi .. B130
Effect of temperature of chlorination on ——. Ochi .. B253
Explanation of explosive decomposition of —— and mode of its decomposition at higher temperatures. Ochi .. B54
explosions. Gill .. B630
Heat of formation of —— and thermochemical explanation of its decomposition and formation. Ochi .. B54
Manufacture of high-grade ——. Matsui and Suzuki .. B130
solutions; Apparatus for electrolytic decomposition of ——. (P) Lorenz .. B747

PAGE

Bleaching powder—*continued*.
solutions; Manufacture of ——. (P) MacMahon, and Mathieson Alkali Works .. B95
Stabilising ——. (P) Gammal .. B943
Blood; Determination of fibrinogen in ——. Starlinger .. B114
Manufacture of substitutes for horn and ebonite from ——. (P) Fitzgerald .. B800*
Potassium fluoride as preservative for ——. Major .. B614
serum; Preparation of a dry, completely soluble salt mixture, containing all the salts of ——. (P) Sächsisches Serumwerk A.-G. .. B355
serum; Production of light-coloured albumin free from inorganic salts, from ——. (P) Cappenberg .. B967
Speed of sedimentation of emulsions such as ——. Sakurai A763, B1026
Blue-print paper. *See under* Photographic.
Boar; Fat from wild ——. Rae .. B264
Boiler feed water. *See under* Water.
-scale; Removing ——. (P) Siebert .. B995
Boilers; Electrical prevention of scale and like deposits in ——. (P) Heberlein .. B1001*
Fixation of bases in electric steam ——. (P) Deutsche Ton- und Steinzeug-Werke A.-G. .. B896
Electrolytic manufacture of thermic siphons for fire-boxes of steam ——. (P) Locomotive Firebox Co. .. B476*
Preparation and feeding of disincrustants for preventing and removing scale in ——. (P) Verderevsky and Saks .. B205
and similar apparatus; Apparatus for removing solid impurities and scum from steam ——. (P) McClelland .. B816*
steam-; Considerations affecting thermal balance of ——. Linguet .. B39
Boiling point elevation; Accurate determination of ——. Jabiczynski and Kon .. B36
Bone-black; Manufacture of glue and of ——. (P) Beyersdorfer, and Zuckerfabr. Frankenthal .. B1021
Bone-Wheeler gas analysis apparatus. Grice and Payman .. B771
Bones; Preparation of grease and glue from ——. (P) Löb .. B529
Borax; Method of obtaining ——. (P) Kuhnert .. B56
Recovery of —— from saline liquors. (P) Iddings .. B95
Borchers' metal; Substitution of —— for platinum in electro-analysis. Bloesen .. B202
Bordeaux mixture; Increasing the efficiency of ——. (P) Ban and Lieblıardt .. B804
-oil emulsion. Winston and others .. B652
Boric acid; Determination of —— in milk and other foods. Liversege and Bagnall .. B349
Determination of —— in nickel-plating solutions. (P) Baker and Girl .. B837
Dissociation constant of ——. Prideaux and Ward .. B252
Electrometric study of titration of ——. Mellon and Morris .. B556
Borneo tallow and illipé nuts. Georgi .. B525
Borneol; Formation of —— from turpentine oil. Murayama and Abe .. B33
Preparation of —— from turpentine oil. Murayama and others B731
from sulphite-cellulose lyes. Holmberg and Sunesson .. B447
Bornyl chloride; Preparation of ——. (P) Schmidt .. B849
Bornylene; Preparation of ——. (P) Chem. Fabr. Schering .. B153
Boron; Determination of —— in iron alloys. Mazzetti and De Carli B472
Determination of —— in steel alloys. Seuthe .. B750
Ferrochrome alloy containing ——. (P) De Golyer .. B678
steels. *See under* Steels.
Treatment of ores containing ——. (P) Kelly .. B173
Boron carbide; Manufacture of ——:
(P) Parsons .. B16
(P) Podszus .. B747*
Production of abrasive substances from ——. (P) Podszus, and Hartstoff-Metall A.-G. .. B982
Boron halides; Use of iron alloys for production of ——. De Carli .. B466
Borondisalicylic acid; Preparation of a silver salt of ——. (P) Schulz and Joerrens .. B769
Boronia thujona; Essential oil of ——. Penfold .. B33
Boswellia serrata; Essential oil from oleo-resin of ——. Roberts .. B114
Bran food flakes. (P) Mininberg .. B803
Preservation of ——. (P) Schiff-Giorgini .. B196
wheat-; Detection and determination of rice husk in ——. Marchadier and Goujon .. B844
wheat-; Proteins of ——. Isolation and elementary analysis of a globulin, albumin, and prolamine. Jones and Gersdorff B228
Brandy; Detection of diethyl phthalate in ——. Wewers .. B687
Brass; Brittle ranges in —— as shown by Izod impact test. Bunting B337
Corrosion of —— as affected by grain size. Anderson and Enos .. B298
Corrosion of —— in sea-water. Bengough and May .. B833
Dezincification of ——. Nixon .. B208
Effect of lead and tin on 60 : 40 ——. Hanser .. B426
Eutectoid ($\alpha+\gamma$) in ——. Heike and Ledebur .. B1016
Heat treatment of $\alpha\beta$- ——. Ellis and Schemnitz .. B790
Internal strain in —— and methods of relieving it. Masing and Haase .. B790
melting; Use of fluxes in ——. Genders and Haughton .. B472
Relation of heat treatment, mechanical properties, and microstructure of 60 : 40 ——. Homerberg and Shaw .. B472
Relation of heat treatment to microstructure of 60 : 40 ——. Williams and Homerberg .. B472
-smelting furnaces; Refractory lining for ——. (P) Hale .. B679
tubes in a feed-water heater; Investigation of a fatigue failure of —— and nature of fatigue. Millington and Thompson .. B298
Brassica nigra; Increase in content of allyl isothiocyanate in —— on manuring with sulphur. Goldoni .. B353

Bread; Determination of alcohol in ——. Sundberg .. B228
-making; Counting yeast cells in dough for ——. Turley .. B993
-making dough; Fermentation of ——. Chabot .. B70
-making; Effect of water containing free chlorine in ——. Morison .. B993
-making flour composition. (P) Blouch and others .. B727
-making; Manufacture of yeast stimulant for ——. (P) Takamine, jun., and others .. B489
-making; Preparation useful for ——. (P) International Takamine Ferment Co. .. B112
-making; Reports on research in —— at the National Bakery School, London. Dorée and Kirkland .. B884
-making; Utilisation of bacteria which form lactic and acetic acids in ——. (P) Beccard .. B440
-making; Value of sweet potato flour in ——. Gore .. B70
Manufacture of ——:
(P) Buffington .. B764
(P) Darrah .. B803
(P) Heath .. B886
(P) Negro .. B274*
Manufacture of leavened ——:
(P) Hoffman and others .. B196*
(P) Ward .. B71
Production of enzymes for use in manufacture of ——. (P) Kohman and others .. B30
Vitamin content of ——. Hara .. B228
Vitamin B content of white ——. Hartwell .. B349
Bremen blue. Vanino and Eugert .. B391
Brewers' coppers and other vessels; Heating and promoting the circulation of the liquid contents of ——. (P) Worssam and Sons, and Fox .. B762*
Brewing:
(P) Wooldridge .. B992
(P) Wooldridge, and Soc. Anglo-Belge du Proc. Wooldridge .. B147
Complete utilisation of hops in ——. (P) Von Horst .. B993
Electric measurement of available acidity and its applications in English ——. Parsons .. B192
Utilisation of raw grains in ——. Dietsche and Klein .. B145
Brick furnaces; Attaining high temperatures of combustion in burning fuel in ——. (P) Helbig .. B382
kilns. (P) Cannvera .. B218
porosimeter; Simple ——. Pressler .. B381
Bricks; Checker —— for resisting alkaline slags. Booze and Flint .. B910
Equaliser apparatus for transverse tests of ——. Whittemore .. B514
and the like; Manufacture of ——. (P) Vaughan .. B58
and the like; Manufacture of basic ——. (P) Hodson .. B384, B748
and the like; Manufacture of porous ——. (P) McDermott and McLaren .. B676
Manufacture of building ——. (P) Carthaus .. B384
Manufacture of fireproof ——. (P) Sieurin .. B748
Manufacture of porous ——. (P) Koppers .. B830
Thermal conductivity and other properties of two commercial heat-insulating —— used in kiln construction. Green .. B674
Waterproofing ——. (P) Hendrich .. B831
Brine; Apparatus for continuous purification of ——. (P) Oxley .. B746
Apparatus for evaporation of —— and simultaneous separation of gypsum. (P) Maschinenbau A.-G. Balcke .. B788
Electrolysis of ——. (P) Mathieson Alkali Works .. B671
Insoluble anodes for electrolysis of ——. Fink and Pan .. B906
Purification of ——. (P) Brooks, and Mathieson Alkali Works .. B57
Purifying —— for electrolysis. (P) Hanson and others .. B746
Recovering various salts from natural ——. (P) Burnham B174, B467
Brinell test on hardened steel; Improvements in the ——. Hultgren B885
Briquettes; Apparatus for manufacture of ——. (P) Illingworth, and Illingworth Carbonization Co. .. B589*
Apparatus for manufacture of fuel ——:
(P) Lamplough and Fathers .. B551*
(P) Nielsen and others .. B587
Fuel —— and binders therefor. (P) Nagel .. B1003
Carbonising fuel ——. (P) Zwoyer .. B858
Lignite ——. (P) Setchell .. B163
Manufacture of ——:
(P) Blänsdorf und Co. .. B547
(P) Broadbridge and others .. B779*
(P) Illingworth .. B408
Manufacture of coal and other ——. (P) Lloyd and St. Barbe B166*
Manufacture of fuel ——:
(P) Chance .. B8
(P) Ormandy and Board .. B7
(P) Vogel, and General Fuel Briquette Corp. .. B286
Manufacture of ore or fuel ——. (P) Smallwood .. B364
Manufacture of peat ——. (P) Dow .. B777
Manufacture of pressure-resisting —— from lignite smalls or lignite coke dust. (P) Plochmann .. B83
Manufacture of strong coke —— from non-caking small coal. (P) Plochmann .. B662
Standardisation of methods of testing ——. Berthelot .. B774
Treatment of coal and manufacture of ——:
(P) McIntire, and International Coal Products Corp. B244
(P) Smith, and International Coal Products Corp. B244
Briquetting. (P) Damon, and Vulcan Iron Works .. B777
coal:
(P) Apfelbeck .. B547
(P) Nagel .. B740
coal, coke, ores, and the like. (P) Ges. für Maschinelle Druckentwässerung .. B974
coal or other material; Machines for ——. (P) Sutcliffe .. B245*
extracted lignite. Piening .. B324
fuel:
(P) Martel .. B740
(P) Woodall, Duckham and Jones (1920), and Duckham B286

Bromate; Use of —— in volumetric analysis. Preparation and properties of normal and basic mercuric bromate. Smith B772

Bromelia Magdalenæ, Wright; Fibre of ——. Bunting B741

Bromic acid; Determination of hypobromous acid and ——. Bilmann and Rimbert B53

Bromides; Analysis of alkali ——. Winkler B253
Manufacture of alkali ——. (P) Michael und Co. B291

Bromine; Addition of —— to fats and oils. Oestermann.. .. B719
Detection of chlorine, iodine, and —— in mixtures of halides. Kunft B695
-iodine value of oils; Determination of ——. Prescher .. B318
ions; Detection of —— in presence of other ions giving a precipitate with silver nitrate:
Pamfil B581
Pamfil and Wonnesch B851
in organic compounds; Determination of ——. Mazume and Kino B204
in organic compounds; Hydrogenation method for determination of ——. Ter Meulen and Heslinga B36
Oxidation method of determining chlorine, iodine, and —— in organic compounds. Heslinga B357
value. Addition of bromine to fats and oils and determination of the ——. Sabalitschka and Dietrich B755
value of fats; Gravimetric determination of —— and the bromine refraction value. Biazzo B478
values of oils; Determination of ——. Sabalitschka and Dietrich B525
Volatility of —— in solutions of different electrolytes and its bearing on bromometric analysis. Jander and Felt .. B731
water; Alkalimetric determination of ——. Rapp B595

Bromoaniline salts of 2.7- and 2.6-naphthalenedisulphonic acids: The *m*- and *p*- ——. Forster and Keyworth 168T
salts of α- and β-naphthalenesulphonic acids; The *m*- and *p*- ——. Forster and Keyworth 301T

Bromo-compounds; Preparation of aromatic —— by the aid of mixtures of hydrogen peroxide and hydrogen bromide. Leulier B1007
-derivatives of α-elæostearic acid. Ishio.. .. .. .. B264
-derivatives of methane; Preparation of ——. (P) Elektrochem. Werke and others B811

Bromogluten. Vandevelde B1026

α-Bromoisovaleric acid; Salts of —— with organic acids. (P) Goldschmidt and Neuss B493

Bromometry as substitute for iodimetry. Manchot and Oberhauser B236

Bronze; Effect of casting temperature and heat-treatment on physical properties of a high-tin ——. Rowe.. .. .. B834
Effect of cold-drawing and annealing on electro-chemical properties of low-tin ——. Wilson B298
Phosphor ——. *See under* Phosphor-bronze.
Penetration of —— into steel at high temperatures. Perrin .. B946
zinc-; Effect of casting temperature on physical properties of sand-cast ——. Rowe.. .. .. B298

Bronzes; Aluminium ——. *See under* Aluminium.

Bryonia dioica; Enzymes of roots of ——. Girardet B887

Bryony roots; Enzymes of ——. Girardet B887

Buchu camphor and its homologues; Constitution of —— and their transformation into dioximes of cyclic orthodiketones. Wallach and Weissenborn B447

Bucking and bleaching fabrics and yarn in skein form. (P) Mohr and others B508

Buffer mixture; A universal ——. Prideaux and Ward B317

Building materials; Manufacture of ——:
(P) Bergsma B134
(P) Minache B469
(P) Pfarrius B59
(P) Tralls B559
materials; Manufacture of porous ——. (P) Bayer B1014
materials; Manufacture of —— using sulphite-cellulose waste lye. (P) Streblenert B831
materials; Production of —— from ashes, especially lignite ash. (P) Novo-Mörtel Ges. B945

Bulbus scillæ; Preparation of the cardiac glucoside of ——. (P) Chem. Fabr. Sandoz B682, B997

Bunsen iodometric distillation method of determining highly oxidised substances. Jander and Beste B619

Burette for gas analysis. Moldenhauer B734
tubes; Apparatus for calibrating ——. Stott B380

Burmah; Crude oils of ——. Wilson B701
petroleum; Aromatic hydrocarbons in ——. Mulany and Watson 310T

Burner gases. *See under* Gases.

Burners for utilising molasses as fuel. (P) Hildebrandt, and Black-Strap Fuel and Potash Products Co. B121

Burton cracking process. Waterman and Reus B207

n-Butoxythiocarbonic acid disulphide; Preparation of ——. (P) Adams, and Naugatuck Chemical Co. B577

PAGE

Butter, artificial; Preparation of ——. (P) Schiepe B534
Detection of adulteration of —— by determination of the calorific value of the fat. Andoyer B570
Determination of chlorides in ——. Grossfeld B960
Determination of fat in ——. Grossfeld B922
fat; Comparison of Roese-Gottlieb and Babcock methods for determination of ——. Dahlberg B70
fat; Determination of adulterants in ——. Spitzer and Epple B803
fat; Determination of coconut oil and —— in fat mixtures. Leopold and De Mooy.. .. .. B222
fat; Effect of giving certain oils in daily diet of cows on composition of ——. Channon and others B688
fat; Factors concerned in autoxidation of ——. Greenbank and Holm B639
Formation of ——. Pratolongo B308
-making; Neutralisation of cream for ——. Jackson .. B884
Manufacture of:
(P) Karpinsky and Anderson B533
(P) North, and Milk Oil Corp. B350*
Preparation of imperishable ——. (P) North, and Milk Oil Corp. B1027
Preparation of —— from milk oil. (P) North, and Milk Oil Corp. B1027
substitute; Manufacture of ——. (P) Gesell B71

Butyl alcohol; Analysis of commercial ——. Spiers .. 251T, B802
Chlorination of butylene from —— and properties of dichlorobutane. Briner and others B399
Production of acetone and —— by fermentation of molasses. (P) Robinson, and Atlas Powder Co. B1025

Butylene; Chlorination of —— and properties of dichlorobutane. Briner and others B399

1.3-Butyleneglycol; Preparation of ——. (P) Dalmer B849
Use of —— as glycerin substitute and for improving artificial resins. (P) Badische Anilin und Soda Fabrik B927

βγ-Butylene-di-*p*-toluidine. *See* βγ-Di-*p*-tolylaminobutane.

Butyn; Local anæsthetic properties of isocaine, cocaine, procaine, and ——. Schmitz and Loevenhart B996

Butyric acid; Denigès' test for ——. Bamford B535
Determination of acetic acid, propionic acid, and ——. Fyleman 142T, B399

C

Cabbage plants; Isolation of an inhibitory substance from rotted ——. Mallmann and Hemstreet B1023

Cacao beans and products; Analytical methods for investigating ——. Flucke B489
butter and its adulteration with coconut oil. Vaubel B524
butter; Application of miscibility temperatures to examination of ——. Rosset and others B70
butter; Bellier's reaction applied to detection of adulteration in ——. Béard-Clemencet B525
butter; Detecting adulteration of ——. Koehler B431
butter; Higher saturated fatty acids of ——. Morgan and Bowen 346T
Determination of theobromine in ——. Cappelli B885
Distribution of theobromine during fermentation of ——. Knapp and Wadsworth 124T, B960
"germs"; Analysis of ——. Härtel B570
hulls; Utilisation of —— for production of alcohol. (P) Bielmann B487
husk fat. Galanos B1019
products; Counter-current extraction of fat from ——. (P) Wilson, and Cocoa Products Co. of America B565
products; Determination of fat in ——. Feldstein B885
See also Cocoa.

Cadinene; Constitution of ——. Ruzicka and Stoll B278

Cadinol from galbanum oil. Ruzicka and Stoll B278

Cadmium; Activities of zinc, tin, lead, bismuth, and —— in their binary liquid mixtures. Taylor B137
-bismuth alloys; Hardness of ——. Di Capua and Arnone .. B260
-copper alloys; Constitution of ——. Jenkins and Hanson .. B298
Critical studies on methods of determining ——. Congdon and Carter B317
Detection of —— by means of pyridine. Kolthoff and Hamer B968
Determination of —— in alloys. Egerton and Raleigh .. B99
Determination of —— in aluminium alloys. Budgen.. .. B426
Determination of —— in spelter and zinc ores. Barrs 77T, B520
Diphenylcarbazide as qualitative reagent for —— in presence of mercury and copper. Kolthoff B202
-lead alloys; Hardness of ——. Di Capua and Arnone .. B560
-lead-zinc system. Cook B337
Mechanical properties of aluminium-zinc alloys containing ——. Budgen 273T, B791
Microchemical detection of —— as double pyridine compounds. Kolthoff and Hamer B969
Rust-proofing by coating with ——. (P) Wissler and others .. B794*
Separation of —— from mercury by means of pyridine. Rother B695
Separation of —— from zinc. Chalupny and Breisch B580
-thallium alloys; Hardness of ——. Di Capua.. .. .. B99
-tin alloys; Hardness of ——. Di Capua B426
Vapour pressure of —— and of its alloys with zinc. Egerton and Raleigh B99
-zinc-aluminium alloys. Budgen B873

Cadmium pigments; Production of red ——. (P) Bayer und Co. B483

Cadmium sulphide. Egerton and Raleigh B99
Solubility of ——. Piccard and Thomas B92

PAGE

Cæsium; Determination of —— as perchlorate. Murmann .. B79
Reaction of magnesium and calcium with ——. Murmann .. B37
Caffeine; Determination of —— in coffee. Lukas B489
Molecular compound of salicylic acid and ——. Regenbogen and Schoorl B197
Presence of guanosine in the green leaves and berries of the coffee tree, and its relation to origin of —— in this plant. Camargo B312
Calamintha umbrosa; Essential oil from leaves of ——. Mondgill 163T, B966
Calcining apparatus. (P) Pike B20
and clinkering materials; Preparing and ——. (P) Pike .. B749*
See also Roasting.
Calcite; Lowering of decomposition temperature of —— by admixture with other substances. Samoilow B595
Calcites; Active agents in luminescent ——. Tanaka B466
Calcium; Colorimetric determination of —— as phosphate. Briggs B581
Critical studies on methods of determining ——. Congdon and others B453
Detection and determination of very small quantities of —— by means of ammonium ferrocyanide. Feigl and Pavelka .. B968
Determination by the opacimetric (nephelometric) method. Chéneveau and Bonssu B156
Determination of —— in organic material. Hecht B156
Determination of phosphoric acid, magnesium, potassium, and —— in grain and feeding-stuffs. Gilmour B651
Ferric oxalate, and its application to separation of iron and ——. Barlot B893
Gravimetric determination of —— as anhydrous calcium oxalate. Villamil B893
-lead alloys; Manufacture of ——. (P) Metallbank u. Metallurgische Ges. B21
Reaction of —— with rubidium and cæsium. Murmann .. B37
Use of picrolonic acid for micro- and histological detection of ——. Kisser B202
Calcium acetate; Distillation of ——. Ardagh and others B1020
solution; Distillation of pyroligneous acid and evaporation of ——. (P) Merriam, and Badger and Sons Co. B820
Calcium aluminates; Solubility and hydration of ——. Kühl and Thüring B630
Calcium arsenate; Basic ——. Tartar and others B466
Calcium arsenate; Determination of free calcium hydroxide in commercial ——. Smith and Hendricks B867
Manufacture of ——. (P) Lamb, and American Smelting and Refining Co. B870
Manufacture of dry powdered ——. (P) Simpson B1012
product; Manufacture of ——. (P) Drefahl and others B57
Calcium o-benzyloxybenzoate. (P) Wildman, and Swan-Myers Co. B353
Calcium bicarbonate; Decomposition by heat of aqueous solutions of ——. Stumper B1011
Determination of equilibria in solutions containing carbonic acid, calcium carbonate, calcium phosphates, and ——. Kugelmass and Shohl B292
Volumetric determination of total carbonic acid in dilute solutions of ——. Crowther and Martin B923
Calcium carbide cakes; Manufacture of ——. (P) Them, and Carbic, Ltd. B380*
Determination of ——. Yee and Krase B907
Manufacture of —— in electric furnaces. (P) Nottebohm .. B829
Manufacture of —— and reduction of ore. (P) Reid, and International Nitrogen Co. B558
and nitrogen; Mechanism and thermochemistry of reaction between ——. Krase and Yee B907
Synthesis and decomposition of ——. Ruff and Foerster .. B254
Calcium carbonate; Calcining rocks containing magnesium carbonate and ——. (P) Shaw and Bole B632
Determination of equilibria in solutions containing carbonic acid, calcium bicarbonate, calcium phosphates, and ——. Kugelmass and Shohl B292
Precipitation of aqueous solutions of metal salts by calcium hydroxide and ——. Schopper B178
Solubility of —— in water containing carbon dioxide under high pressures, and properties of the solutions obtained. Bachuel B556
Thermal effects on heating curve of —— in graphite tubes. Tammann and Grevemeyer B215
Calcium chloride; Production of potassium nitrate and ——. (P) De Häen B421
solutions; Crystallisation of ——. (P) Maschinenbau A.-G. Balcke B1013
Calcium compounds; Separation of soluble strontium compounds and ——. (P) Rhenania Ver. Chem. Fabr., and others B711
Calcium cyanamide; Action of hydrogen chloride on ——. Montemartini and Losana B866
Behaviour of —— when heated in nitrogen at high temperatures. Kameyama B786
Decomposition of —— in South Indian soils. Norris and others B106
Decomposition of —— on storage. Jacob and others B685
Determination of nitrogen in ——. Montemartini and Losana .. B866
Granulated ——. Dutoit B346
Heat of formation of ——. Kameyama B786
Manufacture of ——:
(P) Fujiyama B334
(P) Reid, and International Nitrogen Co. B419
Manufacture of ammonia from ——. (P) Ehrlich, and Stickstoffwerke A.-G. Ruse B294
Manufacture of a dustless non-corrosive fertiliser from ——. (P) Schranth B437
Manufacture of —— and of material for use therein. (P) Reid, and International Nitrogen Co. B1012
Mechanism and thermochemistry of formation of ——. Krase and Yee B907

PAGE

Calcium cyanamide—*continued.*
Poisonous action of crude —— and of its constituents. Belling .. B606
Production of cyanides from ——. Dodonow B744
Preparation of guanidinium salts from ——. Blair and Braham B806
Preparation of urea from ——. (P) Chem. Fabr. Schering .. B354
Production of granules of —— of high nitrogen content. (P) Des Ylouses, and Soc. l'Azote Français B647
and its transformation products; Chemical and biological studies with ——. Jacob and others B842
Calcium ferrites. Martin B867
Calcium fluoride; Decomposition of —— with sulphuric acid. Traube and Lange B670
Calcium formate; Formation and decomposition of ——. Fischer and others B536
Calcium hydroxide; Precipitation of aqueous solutions of metal salts by calcium carbonate and ——. Schopper B178
Calcium lactate; Formation of pyruvic acid and alcohol from —— by yeasts. Kayser B725
Calcium methylarsinate; Preparation of ——. (P) Sächsisches Serumwerk A.-G. B849
Calcium nitrate; Manufacture of hydrated ——. (P) Krase and Yee B56
Manufacture of non-deliquescent mixed fertilisers from ——. (P) Quade B723
Calcium oxalate; Obtaining —— from vegetable matter. (P) Bhopal Produce Trust, Ltd., and Fraymouth B577
Recovery of —— and of other materials from trees. (P) Bhopal Produce Trust, Ltd. B537
Thermal decomposition of ——. Moles and Villamil B615
Calcium oxide; Thermal effects on heating curve of —— in graphite tubes. Tammann and Grevemeyer B215
See also Lime.
Calcium persulphate; Preparation of ——. Erdenbrecher B377
Calcium phosphates; Determination of equilibria in solutions containing carbonic acid, calcium bicarbonate and carbonate, and ——. Kugelmass and Shohl B292
Calcium salts of higher fatty acids; Relative solubilities of magnesium salts and ——. Biltz and Röhrs B184
salts of inositol-phosphoric acid; Manufacture of soluble acid ——. (P) Soc. of Chem. Ind. in Basle B731
salts; Production of aqueous solutions of therapeutic value containing insoluble ——. (P) Wachtel B493
Calcium sulphate; Action of —— in the setting and hardening of cement. Tippmann B516
Action of silica and alumina on ——. Marchal B92
cement. Haddon and Brown 11T, B219
cements; Mechanism of setting of ——. Haddon B676
Decomposing ——. (P) Metallbank u. Metallurgische Ges. .. B422
Effect of soil suspensions on solubility of —— in presence of lime. MacIntire and Shaw B345
Production of sulphur dioxide and hydraulic cement from ——. (P) Bayer und Co. B379
Removal of —— adhering to filter-cloth. (P) Ehrlich und Co. B282
Solubility and surface energy of ——. Dundon and Mack, jun. B14
solutions. Jolibois and Chassevent B517
See also Anhydrite, Gypsum, and Satin white.
Calcium sulphide; Manufacture of ——. (P) Rossberg and Sheridan B558
Calcium sulphoaluminate; Effect of temperature on formation of ——. Kühl and Albert B96
Calf skin. *See under* Skin.
Callistemon lanceolatus; Essential oil of ——. Penfold B926
Callistemon viminalis; Essential oil of ——. Penfold B926
Calorific value of fuels of high ash content; Determination of ——. Poleich and Joklik B408
value of gas; Automatic control of ——. (P) Holmes, and Gas Light and Coke Co. B778
value of gases; Determination of —— by Hempel's method. Foerster and Grünert B120
value of liquid fuels. Morpurgo B285
Calorimeter; Iron-mercury ——. Schofield B316
Micro-——. Roth and others B928
Calorimeters. (P) McAlpine B854
for determining and indicating total available heat of a flow of combustible fluid. (P) Packard, and Cutler-Hammer Manuf. Co. B358*
Gas ——. (P) Simmance B357
Jet ——. Payman B974
for specific heats and heats of vaporisation. Keyes and Beattie B850
Calorimetric apparatus for measurement of reaction heats at high temperatures. Davis B658
bombs. (P) Darroch B320
standard; Heat of combustion of salicylic acid and its use as a secondary ——. Verkade and Coops, jun. B1028
Camel hump fat; Acids of ——. McClelland 164T, B952
Camomile extract; Production of a ——. (P) Chem.-Pharm. Werke Bad Homburg A.-G. B578
Camphor; Analysis of synthetic ——. Zeiger B807
Buchu ——. *See under* Buchu.
Determination of —— in pharmaceutical preparations. Randall B653
Formation of diketocamphane (ketocamphor) by oxidation of ——. Bredt B313
and nitrocellulose. Nichols B706
oil. *See under* Oils, Essential.
Preparation of aqueous emulsions of ——. (P) Merck and Eichholz B35
Purification of ——. (P) Loomis, and Du Pont de Nemours and Co. B492
Purification of crude synthetic ——. (P) Kessler, and Du Pont de Nemours and Co. B448

PAGE
d-Camphor; Melting point and iodine value of refined natural ——. Salamon .. B33
a-Camphorene; Constitution and isomerisation of ——. Ruzicka and Stoll .. B400
Cancer-producing factor in tar. Kennaway .. B822
-producing substance; Formation of a —— from isoprene. Kennaway .. B822
-producing tars and tar fractions. Kennaway .. B504
Canned fruits; Nature of corrosion in ——. Kohman and Sanborn B397
Canning; Technology of ——. Jones .. 139T, B961
Cannizzaro's reaction in mechanism of alcoholic fermentation. Schweizer and Gellinger .. B992
Cantaloupes; Relation between composition of California —— and their commercial maturity. Chace and others .. B844
Caoutchouc; Accelerating vulcanisation of —— and products for use therein. (P) British Dyestuffs Corp., and others .. B757
and analogous vegetable resins; Manufacture of ——. (P) Hauser, and K. D. P., Ltd. .. B1020
Constitution of ——. Staudinger .. B756
Crystallised ——. Pummerer and Koch .. B798
Heat of combustion of natural and "sulphuric acid" ——. Kirchhof and Matulke .. B917
and isoprene. Homologues of hydrocaoutchouc. Staudinger and Widmer .. B954
Manufacture of ——. (P) Stutchbury, and K. D. P., Ltd. .. B683
Vulcanisation of ——. (P) Peachey .. B393*
See also Rubber.
Capillary phenomena and their importance in flotation and filtration processes. Schultze .. B815
Capric acid; High-boiling residue from molasses fuel oil as a source of ——. Marvel and Hager .. B438
Caramel; Preparation of —— for medicinal use. Rakusin and Nesmejanow .. B956
Carbamates; Relationship between carbon dioxide, carbonic acid, carbonates, and ——. Faurholt .. B940
Carbamic esters containing iodine; Preparation of ——. (P) Chinoin Fabr. Chem.-Pharm. Produkte A.-G. .. B769
Carbamides of aminobenzoylaminonaphthalenesulphonic acids. Chemotherapeutical researches in the 205 Bayer series. Fourneau and others .. B399
Carbazole; Chemistry of ——. Lindemann .. B367
derivatives; Manufacture of —— from potassium carbazole. (P) Atack .. B667
Dyestuffs derived from ——. Dutt .. B462
Manufacture of pure ——. (P) Heil und Sthamer A.-G. B934
Manufacture of sulphur dyestuffs from indophenols derived from ——. (P) Lewcock and others .. B329
Obtaining pure anthracene and —— from crude anthracene. (P) Weil, and Heil und Sthamer .. B740
Separation of anthracene and ——. (P) Michael und Co. B590
Separation of —— from anthracene and from azoxybenzene by oil flotation. Traube and others .. B895
Carbides; Micrographic detection of —— in ferrous alloys. Pilling .. B258
of sodium and boron; Production of ——. (P) Parsons B16
Carbocyanines. *See under* Quinoline dyestuffs.
Carbohydrate metabolism. Preparation of an anti-diabetic hormone from yeast. Hutchinson and others .. B197
Carbohydrates; Action of iodine on some ——. Vintilescu and Faltis .. B190
Allyl ethers of ——. Tomecko and Adams .. B191
Determination of reserve —— in plants. Thomas .. B723
Direct method for determination of dextrose and other ——. Knecht and Hibbert .. B1023
Manufacture of ethers of ——. (P) Young and others .. B743*
Manufacture of ethers of —— and of their conversion products and derivatives. (P) Lilienfeld .. B374*
Manufacture of higher fatty esters of ——. (P) Soc. de Stearinerie et Savonnerie de Lyon .. B191
Mechanism of oxidation of typical —— with hydrogen peroxide and hypochlorous acid. Craik .. 171T, B1023
Oxidation of —— with air. Spoehr .. B686
in plants; Colorimetric determination of —— in plants by the picric acid method:
Thomas .. B723
Thomas and Dutcher .. B723
of sulphite wood pulp. Hägglund and Klingstedt .. B938
Treating nitrated ——. (P) Snelling, and Trojan Powder Co. .. B813
Carboligase. New type of change of acetaldehyde by fermenting yeast. Neuberg and Reinfurth .. B191
Relationship of synthesis by —— to degradation by carboxylase. Neuberg and Rosenthal .. B922
Carboline derivatives; Synthesis of ——. Lawson and others .. B442
Carbon; Absorption of —— by roots of plants. Breazeale .. B305
Action of permanganic anhydride on varieties of pure ——. Durand .. B557
activated; Properties of —— which determine its industrial applications. Chaney and others .. B119
Activated —— and silica gel for recovering benzol from gas. Urbain .. B739
Activating ——:
(P) Chaney .. B778
(P) Woodruff and Wheeler .. B821
Active ——. Brender à Brandis .. B362
-ammonia-hydrogen cyanide-hydrogen equilibrium. Badger B940
Apparatus for semi-micro-determination of —— in organic substances. Polonovski .. B581

Carbon monoxide; Absorption of —— by cuprous sulphate in presence of sulphuric acid. Damiens B671
-air explosions; Activation of nitrogen in ——. Bone and others B457
Decomposition of ——. Fester and Brude B216
Determination of ——. Lebeau and Bedel B772
Determination of carbon dioxide and —— in flue gases. (P) Siemens u. Halske A.-G. B320
Determination of —— in industrial gases. De la Condamine B1030
Device for promoting combustion of —— in furnaces:
(P) Craig B163
(P) Craig, and Carbon Monoxide Burner Co. B163
Direct combination of —— with alcohols. Fischer and Tropsch B535
and hydrogen; Production of "synthol" by synthesis from ——. Fischer and Tropsch B1001
and iodic acid; Reaction between —— in aqueous sulphuric acid. Lamb and others B941
Manganese dioxide in catalytic oxidation of ——. Whitesell and Frazer B132
Oxidation of ——. Fester and Brude B255
Production of formates from bases and —— in presence of water. Fischer and Von Philippovich B535
Production of formic acid from steam and ——. Schrader B574
Promoting action of palladium on copper in adsorption of hydrogen and ——. Hurst and Rideal B418
Promoting action of palladium on copper in catalytic combustion of hydrogen and ——. Hurst and Rideal .. B418
Reagent for absorbing ——. Damiens B540
Reducibility of ——. Parravano and Del Turco B176
Removal of —— from water-gas and coal-gas, and synthesis of methane. South Metropolitan Gas Co. B660
Synthesis of higher members of aliphatic series from ——. Fischer and Tropsch B152

Carbon oxysulphide; Manufacture of ——. (P) Badische Anilin und Soda Fabr. B870
Purifying gas from ——. (P) Badische Anilin u. Soda Fabr. B780*
Thermal decomposition of ——. Stock and others B418

Carbon tetrachloride; Examination of —— for medicinal purposes. Perkins B806
Tests for purity of ——. Newcomb B536

Carbonaceous filtering media; Revivyfying ——. (P) Wehrich B802
and like materials; Distillation or heat treatment of ——. (P) Nielson and Laing B122
materials; Apparatus for distillation of ——:
(P) Hutchins B704*
(P) Perry B548
materials, Carbonisation of ——. (P) Rhodes and others B820
materials; Distillation of ——. (P) Catlin, and Catlin Shale Products Co. B933
materials; Gasifying ——. (P) Webert B325
materials; Treatment of ——. (P) Trumble B1004
residues from distillation retorts; Utilisation of ——. (P) Heyl B244
slimes and the like; Dressing or concentrating ——. (P) Coppée et Cie. B7
substances; Distillation of ——. (P) Wolf, and Kohlenveredelung Ges. B859, B975
substances; Froth flotation process for removal of ash constituents from ——. (P) Gelsenkirchener Bergwerks-A.-G., Abteil. Schalke B818
substances; Treatment of powdered ——. (P) Davidson and Lewis B899
substances; Utilisation of —— by thermal processes. (P) Schwarzenauer B326

Carbonado; Structure of ——. Gerlach B868

Carbonate-containing minerals; Increasing the fineness of —— (P) Reitmair B746

Carbonates; Behaviour of —— in the flotation process. Berl and Pfannmüller B792
Determination of alkali —— in presence of bicarbonate. Sahalitschka and Kubisch B556
Determination of —— in highly coloured liquids. Dunnicliff B894
Determination and separation of soluble hydroxides, salts of sulphur acids, and —— and of elementary sulphur. Järvinen B509
of heavy metals; Solubility of —— in water under high pressure of carbon dioxide, and properties of such solutions. Haehnel B667
Manufacture of alkali ——:
(P) Plauson B16, B173
(P) Wipfler B256
Relationship between carbon dioxide, carbonic acid, carbamates, and ——. Faurholt B940
in soils; Determination of carbonic acid present as ——. Sanyal B483
Thermal decomposition of ——. Mazzetti B940

Carbonic acid baths; Production of ——. (P) Chem. Fabr. Titania Ges. B829
esters of monohydric alcohols; Preparation of normal ——. (P) Boehringer und Söhne B355
Photolysis of ——. Baur and Büchi B106
Relationship between carbamates, carbonates, carbon dioxide, and ——. Faurholt B940
Volumetric determination of total —— in dilute solutions of calcium bicarbonate or in hard tap-water. Crowther and Martin B923

Carbonisation apparatus; Manipulation of the Fischer-Schrader aluminium —— and examination of the distillation products obtained with it. Noack B161
of bituminous coal and like material. (P) Rusby B778
of carbonaceous materials, *e.g.*, pitch. (P) Rhodes and others .. B820
of cereal husks and other vegetable waste. (P) Von Radolin .. B664
of coal, lignite, and the like. (P) Davies B500
of coal, lignite, shale, or other bituminous materials; Apparatus for ——. (P) Prinz zu Loewenstein B85*
of coal or similar carbonaceous substances; Apparatus for ——. (P) Owen B588
Coking and carbonising processes and apparatus, more particularly for low-temperature ——. (P) Koppers B548
of combustible materials. (P) Hildebrandt B123
furnace. (P) Bertbelon B83
gases. *See under* Gases.
and gasification of fuels. (P) Davies B501
Low-temperature ——:
(P) Barrs B740*
(P) Lamie B663
low-temperature; Comparative study of some coal tars produced by ——. Edwards 143T, 149T
low-temperature; Composition of gas from —— in a rotary oven at different temperatures. Arnold B241
low-temperature; Retort furnace for ——. (P) McIntire .. B704*
Low-temperature —— of solid fuels and the like. (P) White .. B244
Low-temperature —— with special reference to lignite. Berthelot B545
Method and apparatus for ——. (P) McEwen B166*
of non-coking bituminous materials at low temperature. (P) Koppers B166*
processes. (P) S. E. Co. B898
Retorts for revivification and ——. (P) Vadder B778
of solid fuel. (P) Rude B663
of solid fuels; Retorts for ——. (P) Queneau B974

Carbonising compound for treatment of metals. (P) Matthewson and others B21

Carbons from aromatic hydrocarbons and derivatives; Catalytic activity of ——. Farmer and Firth B1001

Carbonyl chloride; Determination of ——. Reeves .. 279T, B787
Determination of —— in gas mixtures. Bredig and Von Goldberger B828
Manufacture of ——. (P) Weaver, and Weaver Co. B980
Pyrogenic formation of ——. Biesalski B941

Carbonyl compounds; Formation of alcohols and hydrocarbons from aromatic and aliphatic-aromatic —— by catalytic hydrogenation. Straus and Grindel B925

Carbonyl sulphide. *See* Carbon oxysulphide.

Carborundum; Presence of —— in certain crystals of aluminium nitride. Matignon B510

Carboxyl groups; Titration of amino and —— in amino-acids etc. in aqueous solution. Harris B74
groups; Titration of amino groups and —— in amino-acids, polypeptides, etc. Harris B203

Carboxylase; Relationship of synthesis by carboligase to degradation by ——. Neuberg and Rosenthal B922

Carboxylic acid chlorides; Manufacture of ——. (P) Meister, Lucius, u. Brüning B848

Carburetted air for use in internal-combustion engines; Production of ——. (P) Abad B164

Cardamoms; Essential oil of ——. Moudgill 137T

Carnallite; Technical electrolysis of fused —— for production of magnesium. Fedotieff and Woronin B19

Carnation; Essence of the ——. Glichitch B447

Carnotite; Determination of uranium in ——. Brinton and Ellestad B1017
Extraction of radium, uranium, and vanadium from ——. Thews and Heinle B55
ores; Concentration of ——. (P) Bleecker B181
Synthesis of ——. Canneri and Pestelli B979

Carob beans; Chemical and structural study of ——. Walton .. B195

Carotin; Determination of —— by means of the spectrophotometer and colorimeter. Schertz B288

Carruben seeds; Use of —— in the leather industry. Casaburi and Simonsini B643

Cartridges; Preparation of liquid-air ——. (P) Sprengluft-Ges. .. B579

Carvacrol; Determination of thymol and —— in Spanish thyme oil. Sage and Dalton B1029
Sicilian oil of *Thymus capitatus* as a source of. —— Palazzo and Lutri B536

Case-hardening; Prevention of —— by copper plating. McCullough and Reiff B635
process. (P) Bond and U.S. Chain and Forging Co. B752
See also under Iron *and* Steel.

Casein; Basic amino-acids yielded by ——. Leavenworth B961
curd; Drying ——. (P) Foster, and Vermont Casein Pty., Ltd. B534*
Flocculation of ——. Loebenstein B610
Isolation of an amino-acid of the indole group from ——. Abderhalden and Sickel B763

PAGE

Casein—*continued.*
and the like; Production of moulded articles from ——. (P) Polden B1021
Manufacture of an adhesive from ——. (P) Trutzer B842
Manufacture of alkaline-earth compounds of organic phosphorus compound contained in milk ——. (P) Soc. of Chem. Ind. in Basle B314
Preparation of phosphorus-containing nuclear substance of milk ——. (P) Soc. of Chem. Ind. in Basle B966
Products of prolonged tryptic digestion of ——. Fränkel and others B349
Relation between amino-acid composition of —— and its capacity to combine with base. Cohn and Berggren .. B961
size. (P) Regnier and Bird B920
Treatment of skimmed or soured milk or buttermilk for separation of calcium caseinate (soluble casein) or ——. (P) Marston B533
Casein-sulphuric acid. Hatano B344
Caseinogen; Amide nitrogen of ——. Luck B725
Determination of tryptophan content of ——. Onslow B349
Cashew-nut oil. *See under* Oils, Fatty.
Cassia oil. *See under* Oils, Essential.
Cast articles; Manufacture of ——. (P) Henker B830*
Casting metals. (P) Egerton B428
Castor oil. *See under* Oils, Fatty.
seed lipase. *See under* Lipase.
Catalase of yeast; Stability of ——. Nakamura B921
Catalysis by the action of subdivided metals. Thermal effect of hydrogenation of ethylene at the surface of finely divided nickel. Foresti B361
at an air-liquid interface; Case of ——; destruction of rennin by agitation. Rideal and Wolf B726
Heterogeneous ——. Gurwitsch B152
Heterogeneous ——. Selective action of nickel catalyst in hydrogenation of vegetable oils. Richardson and others .. B564
and the internal-combustion engine. Sokal 283T
Second report of committee on contact ——. Bancroft B39
Simplicity of mechanism of reaction as one of factors conditioning ——. Bullock B279
Third report of committee on contact ——. Taylor B815
Catalyst carriers; Preparation of —— from soluble salts stable on heating. (P) Zieren B238
Catalysts for ammonia synthesis; Manufacture of ——. (P) Clancy, and Nitrogen Corp. B56
Apparatus for making metal ——. (P) Vegetable Oil Securities Co. B985
Drying and coating porous materials for use as ——. (P) Fitzpatrick B972
for hardening oils. (P) Harter and Meyer B986
for hydrogenation:
(P) Bouvier and others B795
(P) Van Arsdel, and Brown Co. B719
for hydrogenation of oils; Manufacture of ——. (P) Ellis .. B432
Influence of the support upon the activity of ——. Rosenmund and Langer B231
Manufacture of ——:
(P) Casale, and Casale Ammonia Co. B737*
(P) Koref B930
(P) Lucas, and V. L. Oil Processes, Ltd. B737*
(P) Nowak B774*
(P) Patrick B159, B360
(P) V. L. Oil Processes, Ltd., and Lucas B238
for nitrogen fixation; Manufacture of ——. (P) Dupare and Urfer B468*
Organic reactions at the surface of dehydrogenating ——. Adkins and Lazier B996
for oxidation of ammonia. Scott B171
for oxidation of aromatic compounds by means of oxygen-containing gases. (P) Melgs and Ellis B403
Palladous oxide —— for reduction of organic compounds. Shriner and Adams B730
Preparation of —— and degradation of aromatic hydrocarbons therewith. (P) Houlehan, and Du Pont de Nemours and Co. B166
Preparation and reduction activity of nickel ——. Lietz .. B795
for synthesis of ammonia; Manufacture of ——. (P) Larson and Lamb B1013
for synthesis of ammonia; Manufacture of pulverulent ——. (P) Urfer B256
used in hydrogenation of oils and like substances; Preparation and revivification of metallic ——. (P) Technical Research Works, and Lush B916
See also Contact substances.
Catalytic action; Studies in ——. New function of reduced copper. Komatsu B446
activity of blood charcoal and hæmin charcoal. Warburg and Brefeld B237
activity of carbons from aromatic hydrocarbons and derivatives. Farmer and Firth B1001
activity of metals. Henke and Brown B232
dehydration and dehydrogenation by means of anhydrous zinc sulphate. Brus B74
dehydration of hydroaromatic alcohols. Senderens B114
dehydrogenation. Pfaff and Brunck B120
dehydrogenation: Kinetics of ——. Zelinsky and Pawlow .. B445
-electrolytic method of reduction. Ishiwara B768
hydrogenation of organic compounds with common metals at the ordinary temperature. Kelber B276, B276
and induced reactions. Catalytic and induced oxidation in presence of salts of cerium and of iron. Goard and Rideal .. B214
metals. Piccard and Thomas B99
processes; Contact apparatus for ——. (P) Zieren B283

Catalytic—*continued.*
reactions; Absorbing gases and vapours and carrying out ——. (P) Meister, Lucius, u. Brüning B698
reactions; Apparatus for carrying out ——. (P) Bayerische Stickstoffwerke A.-G., and Loewe B323
reactions between gases; Performing ——. (P) Wolfes, and Merck Chem. Fabr. B238
reduction of acetals. Karlyone and Kimura B113
Catechin; Constitution of ——. Production of maclurin from acacatechin. Hazleton and Nierenstein B880
Gelatin-salt test for ——. Nierenstein B25
Catechins; Stereoisomeric ——. Freudenberg and Purrmann .. B642
Cathodes for electric discharge tubes. (P) N. V. Philips' Gloeilampenfabr. B551
for electrolytic refining of metals. (P) Schuh B21
Platinised alundum —— in electro-analysis. France and Eckert B813
for thermionic electron discharge devices. (P) Harris, and Western Electric Co. B550
Cattle-food; Manufacture of ——. (P) Sherrard B651
See also Feeding-stuffs *and* Fodder
Caustic soda. *See under* Soda.
Causticising sodium carbonate by ferric oxide. Matsui and Yasuda B130
Specification for quicklime for use in ——. B91
Cell-membrane; Determination of —— in efficiency experiments. Thomas and Kapfhammer B309
Cellase of taka-diatase. Neuberg and Rosenthal B109
Cellobiase and lichenase. Pringsheim and Leibowitz B147
Cellular materials; Manufacture of ——. (P) Lefebure .. B757
Celluloid; Non-inflammable —— for photographic films. (P) Auryngcr B655
Stability and stabilisation of nitrocellulose for ——. Atsuki B127
Thermal decomposition of ——. Atsuki B1008
Cellulose. Hess and others B88
Action of aqueous sulphurous acid on normal ——. Cross and Engelstad 255T
Action of chloral on ——. Ross and Payne B168
Action of highly concentrated hydrochloric acid on ——. Hirst and Morrison B168
Action of hypochlorous acid on ——. Craik 173T
Action of 5N nitric acid on ——. Tropsch and Schellenberg B323
Action of stable manure on decomposition of —— in tilled soil. Barthel and Bengtsson B989
Behaviour of —— during decay. Fischer B584
Bleaching of wood ——. Schwalbe and Wenzl B89
and cellulose ethers; Production of products containing ——. (P) Berl B415
Chemistry of ——. Latham Research Fellowship. Cross .. 171T
chemistry. Properties of γδ-dihydroxycarbonyl derivatives and their bearing on the polymerisation of polysaccharides. Hibbert and Timm B168
of coal. Schulz and Hamackova B407
Colloid-chemistry of ——. Wislicenus and Gierisch .. B372
and colloidal iron. Bolton and Dorée B863
Comparative investigations of lignin and ——. Fischer and Tropsch B127
compositions; Plastic ——. (P) Lindsay, and Celluloid Co. B553
compound indifferent to substantive colours; Manufacture of ——. (P) Textilwerk Horn A.-G. B128
Continuous chlorination of ligno- and pecto-cellulose for obtaining pure ——. (P) De Vains B708*
Continuous chlorination of raw —— to eliminate non-cellulosic compounds. (P) De Vains B707
Continuous treatment of ligneous materials for their transformation into ——. (P) Oller, and Etabl. Oller .. B784*
Conversion of —— into lactic acid by heating under pressure with aqueous alkalis. Fischer and Schrader B575
copper sludge; Treatment of ——. (P) Zart and others .. B669
Decomposition of ——. Microbiological analysis of soil as an index of soil fertility. Waksman and Heukelekian B645
Decomposition of wood or plant stems for production of ——. (P) Jochum B826
Definition of ——. Klason B976
and its derivatives; Hydroxymethylfurfural from ——. Heuser and Schott B89
derivatives; Manufacture of ——:
(P) Dreyfus B743*, B743*
(P) Lilienfeld B11
derivatives; Manufacture of artificial silk, artificial horse-hair, and like products from ——. (P) Dreyfus .. B251
derivatives; Manufacture of solutions, dopes, or varnishes with ——. (P) Dreyfus B977
derivatives; Manufacture of threads and filaments from ——. (P) Dreyfus B706
derivatives; Manufacture of useful articles from waste scrap of ——. (P) Schmidt B507
and its derivatives; Quantitative determination of fluorescent powers (spectrofluorescometry) of ——. Lewis B248, B414
derivatives; Rendering —— non-inflammable. (P) Leysieffer B52
Determination of pentosans in wood ——. Powell and Whittaker 35T
Determination of —— in wood. Ritter B904
Determination of —— in wood by the chlorination method. Ritter and Fleck B249
digesters; Recovery of a condensate and heat from gases and vapours from ——. (P) Niederbayerische Cellulosewerke A.-G., and others B743
esparto-; Constitution of ——. Irvine and Hirst B249
Esterification and mercerisation of ——. Herzog and Londberg B414

Cellulose—*continued.*
Esterification and mercerisation of —— as topochemical reactions. Herzog und Londberg B250
Examination of wood used for manufacture of ——. Sieber B50
fibres; Manufacture of ——. (P) Converse, and Atlas Powder Co. B415
fibres; Obtaining easily bleached ——. (P) Von Ehrenthal B905*
fibres; Treatment of artificial —— preparatory to combing and spinning. (P) Köln-Rottweil A.-G. B415
fibres; Treatment of —— with carbon bisulphide and alkali. Thaysen and Bunker B336
films; Manufacture of ——. (P) Soc. Anon. "La Cellophane" B12
gel; Preparation of a —— suitable for films and the like from viscose. (P) Faust B628
and half-stuff; Production of —— from vegetable fibres, including peat. (P) Koch and Runkel B593*
hydrate or articles made from it; Sizing ——. (P) Merckens B977
Hydrolysis of —— by acids as a swelling, ageing, and surface problem. Schwalbe B937
or the like; Apparatus for straining ——. (P) Nebrich .. B708*
Manufacture of ——:
(P) Billwiller and Billwiller B90
(P) Duttenhofer and others B374
(P) Thornley and others B212, B864*
(P) Wallin B11
(P) Zellstoff-fabr. Waldhof and others B826
Manufacture of —— from fibrous peat:
(P) Koch A.-G. B374, B1009
(P) Runkel, and Koch A.-G. B1009
Manufacture of —— from nettles, jute, reeds, etc. (P) Braun B414
Manufacture of —— from plants, such as nettles, jute, reeds, typha, and the like. (P) Braun B939
Manufacture of pure —— for chemical purposes and for the production of filter paper. (P) Rabbow, Willink, und Co. B826
Manufacture of —— from reeds. (P) Von Ordody B826
Manufacture of —— from reeds, straw, maize cob leaves, and similar materials. (P) Von Ordody B826
Manufacture of semi-permeable membranes from regenerated ——. (P) Faust and Vogel B593
Manufacture of —— from straw or similar materials. (P) Bäcker B826
Manufacture of —— together with resin, turpentine, etc. (P) Biffar B939
Manufacture of —— from wood. (P) Lauser B554
material; Preparation of short-fibre —— for chemical treatment such as nitration. (P) Broadbent, and Du Pont de Nemours and Co. B1009
materials; Determination of copper number of ——. Gault and Mukerji B289
membrane of plants; Chemical nature of the ——. Wood B592
molecule; Polymerisation of the ——. Bary B463
mucilage; Production of ——. (P) Schwalbe B977
Neutralising the hydrochloric acid formed by chlorination of cellulosic materials with a view to obtain ——. De Vains B212
Nitration of ——. (P) Walker B733*
of Posidonia fibre. Karl B782
Potash fusion of ——. Heuser and Herrmann B290
Preparation of magnesium bisulphite digestion liquors for manufacture of ——. Schwalbe and Berndt B978
Preparation of standard ——. Corey and Gray .. B782, B1008
Process of treating ——. (P) Moeller B708*
Production of coal-like substances from ——. Schwalbe and Schepp B210
products, especially threads and films; Manufacture of —— from viscose. (P) Stafa A.-G. B905
pulp; Bleaching ——. (P) Eble and others B11
Purifying —— and altering its physical properties. (P) Schwalbe and Becker B90
Recovery of sulphuric acid used in saccharification of —— and of material containing it. (P) Benesch B396
Reserve ——. *See* Lichenin.
sludge; Working up ——. (P) Verein Glanzstoff-Fabr. A.-G. B977*
soda-; Deodorising gases from manufacture of ——. (P) Schwalbe B415
solutions; Manufacture of ——. (P) Lilienfeld B977
solutions; Production of concentrated ——. (P) Hägglund and others B251
solutions; Utilisation of cottonised flax and hemp fibres for production of cuprammonium ——. (P) Krais and Waentig B290
and substances yielding it; Conversion of —— into dextrin and glucose. (P) Terrisse and Lévy B960*
sulphate-; Recovering valuable products from waste gases from soda furnaces in manufacture of ——. (P) Nordström B13
sulphate-; Recovery of soda and active carbon from black liquors from manufacture of ——. (P) Creighton, and Darco Corp. B291
sulphite-; Manufacture of white —— from resinous wood. (P) Alfthan, and Serlachius Aktiebolaget B938
sulphite-; Permanent removal of red discoloration of ——. (P) Heuser and Samuelsen B374
sulphite-; Waste lye from manufacture of ——. *See under* Sulphite-cellulose.
Swelling of cotton ——. Collins and Williams B505
Treatment of bamboo, bagasse, and other fibres for extraction of ——. (P) McRae B506
Treatment of hydrated —— to diminish its absorptive capacity. (P) Soc. Ind. pour l'Appl. de Brevets et Procedés B904

materials prepared in the wet way; Operating shaft kilns with ——. (P) Loesche .. B749
mixtures; Testing sand for Portland ——. Morrison .. B871
Modifying the properties of Portland ——. (P) Grün .. B599
mortar; Trass as substitute for cement and ingredient of ——. Burchartz .. B96
Ore —— and blast-furnace cement in sea-water. Prüssing .. B713
and other materials; Burning —— in two or more stages. (P) Polysius .. B983
Preparation of pulverulent fuels for the purpose of converting their ashes into hydraulic ——. (P) Bouchaud-Praceiq B702
Producing, calcining, and clinkering ——. (P) Pike .. B749*
Properties of Portland —— and determination of free lime. Merriman .. B982
Silicic acid in Portland ——. Hart .. B296, B516
Solubility of Portland —— in weathering agents. Benson and others .. B944
Strength of "superior" —— and of concrete made therewith. Müller .. B713
Use of fuel ashes in production of ——. (P) Rheinisch-Westfälische Sprengstoff A.-G. .. B517
Cementite. *See under* Steel.
Cementitious composition for making plaster sheets and moulded articles. (P) Dunstan .. B176
Cements, bauxite-; Manufacture of —— free from metallic impurities. (P) Patrouilleau .. B384
High-grade ——. Grün .. B516
Hydraulic ——. Berl and Urban .. B58
Superior ——. Gehler .. B634
Centrifugal apparatus and process for treating chemical compounds. (P) Wait .. B583
contact apparatus. (P) Freedenburg, and Bartlett Hayward Co. .. B671
decanting or clarifying apparatus for liquids. (P) Reynolds .. B306
drums. (P) Schmiedeckin, and Krupp A.-G. .. B40
dryers. *See under* Dryers.
emulsifiers. *See under* Emulsifiers.
machines:
(P) Coleman .. B322
(P) Venzke, and Haubold A.-G. .. B498
machines for production of emulsions, colloidal solutions, and the like. (P) Westenholz and Nyrop .. B239
machines for treatment of transformer oils. (P) Unger, and Industrial Products Co. .. B406
separators. *See under* Separators.
Centrifugally-separated liquids; Preventing one of two —— from contaminating the other. (P) Lindgren, and De Laval Separator Co. .. B498*
treated liquid; Preventing injurious reactions (explosions or oxidation) between —— and atmospheric air. (P) Aktiebolaget Separator .. B929
Centrifuges and means for heating the bowls thereof. (P) Mitscherling, and Atlas Powder Co. .. B282
for removing alcohol from guncotton. (P) Gebr. Heine .. B403
Washing residues in closed ——. (P) Chem. Fabr. Griesheim-Elektron .. B282
Ceramic bodies; Bonding effect of ball clay in fired ——. Sortwell B380
bodies; Manufacture of felspar substitute for ——. (P) Ges. für Tuff- und Ton-Technik .. B830
bodies; Temporary binder for ——. (P) Nagle, and Jeffery-Dewitt Co. .. B1013
industry; Heat economy in the ——. Cohn .. B674
materials; Application of interferometer to measurement of thermal dilatation of ——. Merritt .. B598
melts; Tempering cooling strains in ——. (P) Schütz .. B423
products; Manufacture of ——. (P) Vershofen .. B295
ware; Glazing and decorating ——. (P) Dressler, and American Dressler Tunnel Kilns, Inc. .. B335
ware; Oxidation of —— during firing. Behaviour of calcium compounds in clays. Jackson .. B675
ware; Oxidation of —— during firing. Decomposition of iron-sulphur compounds under simulated kiln conditions. Jackson .. B513
ware; Oxidation of —— during firing. Quantitative study of nature of sulphur evolution in kiln firing. Jackson .. B910
ware; Oxidation of —— during firing. Some reactions of a well-known fireclay. Bole and Jackson .. B381
ware; Production of salt-glazed —— in gas-fired kilns. (P) Heuer .. B423
ware. *See also* Earthenware *and* Pottery.
whiteware; Waste heat dryers for ——. Walker, jun. .. B911
Ceratonia siliqua beans; Chemical and structural study of ——. Walton .. B195
Cereal flakes; Manufacture of ——. (P) Postum Cereal Co. .. B727
husks; Carbonisation of ——. (P) Von Radolin .. B664
Cereals; Aleurone cells of ——. Bennion .. B688
Influence of manuring on baking properties of ——. Neumann B305
Physiological studies on ——. Occurrence of amino-acids and polypeptides in the ungerminated oat kernel. Jodidi B803
Simultaneous production of demineralised amylaceous substances and lower nitrogenous matter for food purposes from ——. (P) Boidin and Effront .. B92?*
Ceresin hydrocarbons; Formation of —— from montan wax. Origin of petroleum. Marcusson .. B660

PAGE

Cerium; Analytical methods for ——. Moore and others .. B620*
  Critical studies on methods of determining ——. Congdon and Ray .. B453
  earths; Fractionation of the ——. Fernandos .. B979
  mixed cerium metals, and hydrogen. Sieverts and Müller-Goldegg .. B179
Cerium oxide; Catalytic effects of thorium oxide and —— and their bearing on the theory of the Welsbach mantle. Swan .. B458
Cerium salts; Catalytic and induced oxidation in presence of ——. Goard and Rideal .. B214
Cervus axis; Fat from ——. Rae .. B264
Cervus unicor; Fat from ——. Rae .. B264
Chalkone and its hydroxy derivatives; Absorption spectra of ——. Shibata and Nagai .. B741
Chamber ovens. *See under* Ovens.
Champagne musts; Fractionation of ——. Manceau .. B227
Char, bone-; Revivifying finely-divided —— and the like. (P) Manning, and Manning Refining Equipment Corp. .. B118
Charcoal; Activity of —— and content of foreign atoms. Ruff and Hohlfeld .. B362
  Adsorption of dyestuffs by ——. Paneth and Radu .. B741
  Adsorption of salts by activated sugar ——. Proof of hydrolytic adsorption. Miller .. B815
  Adsorption of vapours by ——. Coolidge .. B359
  Adsorptive capacity of wood —— for dissolved substances in relation to temperature of carbonisation. Philip and Jarman .. B499
  Apparatus for absorbing gases or vapours by means of ——. (P) Meister, Lucius, u. Brüning .. B237
  from blood and from hæmin; Catalytic activity of ——. Warburg and Brefeld .. B237
  containing nitrogen; Activation of —— by iron. Warburg and Brefeld .. B614
  Heat of adsorption of oxygen by ——. Blench and Garner .. B658
  and like filtering media; Revivification of animal ——. (P) Russell .. B271
  Manufacture of ——:
    (P) A.-G. für Anilin-Fabrikation .. B501
    (P) Hiller .. B45
  Manufacture of absorbent ——. (P) Morrell .. B209
  Manufacture of active ——:
    (P) Badische Anilin u. Soda Fabr. .. B409
    (P) Bayer und Co. .. B45
  Manufacture of active —— from black liquors. (P) Creighton, and Darco Corp. .. B29†
  Manufacture of adsorbent ——. (P) Chaney .. B703
  Manufacture of highly active ——:
    (P) Badische Anilin und Soda Fabrik .. B933
    (P) Meister, Lucius, u. Brüning .. B286, B326
    (P) Rhenania Ver. Chem. Fabr. A.-G., Zweigniederlassung Mannheim .. B245
  Mechanism of adsorption by activated ——. Bartell and Miller .. B895
  Nature of adsorption of acetic acid by ——. Pavlov .. B1010
  preparations; Production of highly bactericidal ——. (P) Schoeller .. B578
  Production of highly active ——, and catalytic decomposition of hydrogen peroxide solution by animal charcoal. Firth and Watson .. B671
  Reversal during adsorption of carbon dioxide and hydrogen by wood ——. Lorenz and Wiedbrauck .. B595
  Revivification of activated ——. (P) Chem. Werke Carbon .. B326
  Revivifying adsorbent —— containing sulphur. (P) Badische Anilin und Soda Fabr. .. B326
  Separating gas and vapour mixtures by means of ——. (P) Meister, Lucius, u. Brüning .. B322
  Suitability of lignite coke as active ——. Fischer and Zerbe B43
  wood; Electrical conductivity of coke and ——. Durrer B523
  See also Carbon.
Charcoals; Adsorption of air by various kinds of ——. Sameshima and Hayashi .. B697
  Adsorptive and detoxicating action of various ——. Kap-Soo-Lee .. B1029
  Comparative adsorption of ash constituents from sugar solutions by vegetable and bone ——. Horton and Sengson B270
  Rate of oxidation of certain ——. Lowry and Morgan .. B157
  Relation between hydrogen content of certain —— and some other properties. Lowry .. B457
Chaulmoogra and allied preparations; Chemotherapeutic experiments with ——:
    Schöbl .. B342, B342, B995
    Schöbl and Kusama .. B765
  ethyl, propyl, butyl, and amyl esters. Perkins .. B806
  group; Comparative analytical study of various oils in the ——. Perkins and Cruz .. B342
  oil. *See under* Oils, Fatty.
Chavicine of black pepper. Ott and Lüdemann .. B276
Checker bricks. *See under* Bricks.
Cheese; Determination of fat in ——. Grossfeld .. B488
  Fish-roe ——. Stathopoulos .. B844
  Manufacture of —— of the Camembert type. Mazé .. B430
  Manufacture of Cantal ——, and means of realising the purity of lactic fermentation which assures normal maturation. Mazé .. B308
  Manufacture of Port du Salut —— and of cheese of the Dutch type. Mazé .. B532
  Moulds in blue-veined ——. Golding .. B1026
Chemical reactions. *See under* Reactions.
Chestnut seeds; Saccharides and acids produced by hydrolysis of saponin of ——. Van der Haar .. B31

China clay. *See* Kaolin.
  Determination of porosity of —— by the water-soaking method. Schramm .. B675
  Metallising —— with aluminium. (P) Kraus und Co. .. B944
Chloral hydrate; Colour test for ——. Ross .. B278
Chloramine. *See* Sodium toluenesulphochloramide
Chloramine Yellow. *See* Columbia Yellow *under* Azo dyestuffs.
Chloranil; Preparation of ——. (P) Eller and Lorenz .. B450
Chlorates; Use of chromium-plated cathodes for electrolytic preparation of ——:
    Grube and Burkhardt .. B630
    Liebreich .. B786
Chlorhydrins; Treating petroleum still gases to prepare ——. (P) Brooks, and Chadeloid Chemical Co. .. B808
Chlorides; Conditions of appearance of anode effect in electrolysis of fused ——. Heppenstall and Shutt .. B430
  Determination of —— in plant tissues. Lawrence and Harris B696
  Electrometric titration of ——. Müller .. B894
  Influence of colloids on titration of —— by Volhard's method:
    Kolthoff .. B454
    Van der Burg and Koppejan .. B280, B453
  Manufacture of carboxylic acid ——. (P) Meister, Lucius, u. Brüning .. B848
  Manufacture of metal ——:
    (P) Jacobson, and Kilpstein and Sons Co. .. B17*
    (P) Stafford and others .. B557
  Potentiometric determination of —— in presence of colloids. Liebert .. A404
  Protecting metallic apparatus from action of solutions of ——. (P) Badische Anilin u. Soda Fabr. .. B788
  Voltages of the Daniell cell with fused —— and potential series of the metals in fused chlorides. Tammann .. B562
Chlorinated amines; Manufacture of ——. (P) Durand et Huguenin B769
  hydroaromatic products containing nitrogen; Manufacture of highly ——. (P) Durand et Huguenin .. B10, B463
Chlorinating benzene. (P) Meister, Lucius, und Brüning .. B246
  ethyl alcohol. Chattaway and Backeberg .. B615
  fluids for bleaching etc. (P) Van Meter, and Justinian Caire Co. .. B291*
  methane. (P) Holzverkohlungs-Ind. A.-G. .. B34, B848
Chlorinators for water. (P) Wallace, and Wallace and Tiernan Co. A73
Chlorine; Action of —— on cement and concrete. Gassner .. B383
  Active —— as a germicide for milk and milk products. Hale and Bleecker .. B308
  Apparatus for detecting —— in the air. (P) Gebr. Himmelsbach .. B379
  Apparatus for detecting traces of free —— in chlorinated water. (P) Olszewski and Sperling .. B845
  Continuous conductivity method of measuring small concentrations of —— in air. Hine .. B894
  Detection of bromine, iodine, and —— in mixtures of halides. Kraft .. B695
  Detection of free —— in drinking water. Olszewski .. B728
  Determination of —— by Volhard's method in presence of colloids. Kolthoff and Tomicek .. B318
  Determination of —— in wine. Seiler .. B486
  electrode; Depolarisation of the —— by organic compounds. Youtz .. B389
  Liquefying ——. (P) Jewell, and Chlorine Products Co. .. B909
  Method and apparatus for handling ——. (P) McQuaid and Mitchell .. B597
  in milk; Volumetric determination of ——. Zaribnicky .. B308
  in organic compounds; Hydrogenation method for determination of ——. Ter Meulen and Heslinga .. B36
  Oxidation method of determining bromine, iodine, and —— in organic compounds. Heslinga .. B357
  Photochemical interaction of hydrogen and ——. Chapman B172
  Purifying ——:
    (P) Carbide and Carbon Chemicals Corp. .. B422*
    (P) Currie, jun., and others .. B57
  Superior efficiency of —— in association with ammonia as compared with chlorine alone or "chloros" or bleaching powder in sterilising water. Harold and Ward .. B886
  Theory of photochemical interaction of hydrogen and ——. Chapman and Chapman .. B172
  water; Alkalimetric determination of ——. Rupp .. B595
Chlorine compounds; Manufacture of organic —— together with hydrogen chloride. (P) Chem. Fabr. Griesheim-Elektron B392
Chloroacetic ester. *See* Ethyl chloroacetate.
1-Chloro-2-acylaminoanthraquinones; Preparation of ——. (P) Kopetschni .. B320
Chloroamine and aldehydes; Condensation products from ——. Formation of indophenol. Raschig .. B740
  Mono- ——, the amide of hypochlorous acid. Raschig .. B744
5-Chloro-2-amino-*p*-xylene; Preparation of ——, and azo dyes therefrom. Wheeler and Morse .. B1006
Chloroaniline; Benzenemonosulphonates of *p*- and *o*- ——. Keyworth .. 342T
  salts of 2.7- and 2.6-naphthalenedisulphonic acids; The *m*- and *p*- ——. Forster and Keyworth .. 168T
  salts of *α*- and *β*-naphthalenesulphonic acids; The *o*-, *m*-, and *p*- ——. Forster and Keyworth .. 301T
1-Chloroanthraquinone-2-carboxylic acid; Manufacture of ——. (P) Thomas, and Scottish Dyes, Ltd. .. B87
Chlorobenzene; Apparatus for manufacture of ——. (P) Boulogne and Meillassoux .. B88
Chloro-compounds; Preparation of aromatic —— by the aid of mixtures of hydrogen peroxide and hydrogen chloride. Leulier .. B1007

PAGE

p-Chloro-*m*-cresol; Esters of ——. (P) Sulzberger B808
1-Chloro-2.4-dinitronaphthalene; Syntheses of quinoneimide dyestuffs with ——. Kehrmann and Van Baerle B125
Chloroform; Auto-oxidation of ——. Clover B152
Colour test for ——. Ross B278
Detection of aldehydes in ——. Isnard B731
Chloro-hydrocarbons; Obtaining drying oils from ——. (P) Gardner B434
Solubility of iodine in ——. Margosches and others B889
Chloroketimino derivatives of hydroaromatic compounds; Manufacture of ——. (P) Durand et Huguenin B10
1-Chloro-2-methylanthraquinone; Manufacture of ——. (P) Thomas, and Scottish Dyes, Ltd. B87
Chlorometry as a substitute for iodimetry and other analytical methods. Jellinek and Krestoff B892
4-Chloro-6-nitro-*m*-anisidine; Preparation of ——. Whiston .. 370T
Chloro-olefines; Dielectric constants of ——. Walden and Werner B889
Chloro-paraffins; Dielectric constants of ——. Walden and Werner B889
Chlorophyll-containing extracts; Decomposition of ——. Maillie B729
Function of —— in plant assimilation. Heilbron 91T
Preparation of a decomposition product of —— containing iron. (P) Matysiak B354
Chloropicrin; Destruction of life within silk cocoons by means of ——. Bertrand B741
Chloroselenic acid; Preparation and properties of ——. Worsley and Baker B93
Chlorosulphonic acid; Analysis of ——. Mayr B710
p-Chlorotoluene; Electrolytic oxidation of —— to the corresponding acid. Dimbrook and Lowy B144
Mono-nitration of ——. Hodgson and Anderson B1007
Chocolate; Detection of coconut oil in ——. Härtel and Marauis B571
Determination of cacao husk in ——. Ezendam B650
Examination of ——. Beythien and Pannwitz B111
Cholesterol content of human milk. Fox and Gardner B348
and its esters; Critical study of methods of determining —— in tissues. Gardner and Fox B964
Formation of artificial petroleum from ——. Kawai and Kobayashi B121
Cholic acid; Preparation of addition compounds of ——. (P) Boehringer Sohn Chem. Fabr. B354
Cholic acid ester; Preparation of a ——. (P) Gehe und Co., and Runne B353
Chondrus crispus; Reactions of ——, particularly with dyestuffs used in therapy. Justin-Mueller B887
Chromanes; Preparation of ——. (P) Claisen B849
Chromates; Bromometric determination of ——. Manchot and Oberhauser B252
Manufacture of ——. (P) Jouve and Helbronner B512*
Preparation of ——. Bogitch B670
Production of —— from ferrochromium anodes. Thompson and others B907
Reactions of —— at high temperatures. Synthesis and decomposition of calcium, sodium, and magnesium chromates in air. Nayar and others B670
Chrome-alum; Manufacture of ——. (P) Hasenclever B380*
Production of crystals of ——. (P) Hasenclever B747*
Chrome mordant; Cheap ——. Richard B507
Chrome-nickel steels. *See under* Steels.
Chrome orange; Production of chrome red, chrome yellow, and —— in one operation by electrolysis. (P) Luckow .. B265
Chrome red; Production of chrome yellow, chrome orange, and —— in one operation by electrolysis. (P) Luckow .. B265
Chrome yellow; Production of chrome orange, chrome red, and —— in one operation by electrolysis. (P) Luckow .. B265
Chromic acid; Electrometric titration of ——. Britton B893
Periodic phenomena during electrolysis of ——. Kieffuer .. B61
solutions; Production of ——. (P) Burwell B511
Chromic anhydride; Manufacture of solid ——. (P) Nydegger .. B294
Chromic lakes of mordant azo dyestuffs. Morgan and Main Smith B934
Chromic oxide; Methods of dissolving ——. Sabalitschka and Bull B828
Production of bright green ——. (P) Chem. Fabr. Griesheim-Elektron B512
Reduction of ——. (P) Berlin B679
Chromic salts; Recovering —— from residues containing chrome. (P) Jucker und Co. B829
Chromite; Oxidation of —— and preparation of chromates. Bogitch B671
Smelting ——. (P) Chem. Fabr. Griesheim-Elektron B388
Chromites; Alkali —— and their solutions. Fricke and Windhausen B215
Chromium in alloy steels. Vogel 367T
or its alloys; Production of ——. (P) Kalling and others .. B876*
-carbon; The system ——. Ruff B60
Coating iron with ——. (P) Weber B717
-copper-nickel alloys. Sledschlag B179
Critical studies on methods of determining ——. Congdon and Gurley B236
Detection of —— in presence of manganese by a wet method. Chaborski B318
Determination of ——. Britton B318
Determination of —— in leather. Wagner B529
Determination of —— in natural phosphates. Grammont .. B466
Electrolytic deposition of ——. Oyabu B61
Electroplating with ——. Liebreich B636
-gold alloys. Vogel and Trilling B60

Chromium—*continued*.
group metals and silicon; Manufacture of alloys of ——. (P) Walter B984
-iron alloys; Production of non-oxidising, non-brittle sheets of ——. (P) Electro Metallurgical Co. B951*
-iron alloys; Treatment of ——. (P) Nead, and American Rolling Mill Co. B1017
-iron-carbon alloys; Ternary diagram of ——. Fischbeck B635
-iron; Manufacture of ——. (P) Petinot B792
-molybdenum alloys with and without copper. Sledschlag .. B179
-nickel alloys; Magnetisation of ——. Safranek B220
-nickel alloys; Magnetisation of —— above the Curie point. Safranek B385
-plated cathodes; Use of —— in electrolytic preparation of chlorates:
Grube and Burkhardt B630
Liebreich B786
Potentiometric determination of vanadium, iron, and —— in presence of each other. Kolthoff and Tomicek B969
Preparation of —— by electrolysis. Sigrist and others .. B948
Preparation of pure —— by direct reduction of the oxide with hydrogen. Rohn B716
Production of pure —— by electrolysis. (P) Grube, and Metal and Thermit Corp. B638
steels. *See under* Steels.
Chromium compounds of azo dyestuffs; Manufacture of ——. (P) Soc. of Chem. Ind. in Basle B328
compounds; Extraction of —— free from alumina and zinc. (P) Carus B421
Chromium hydroxide; Ageing of ——. Fricke and Windhausen B215
Chromium salts; Determination of degree of complexity and complex formation in ——. Gustavson B790
salts; Production of ——. (P) Klaus and Starck B422
Chromium sulphate; Manufacture of ——. (P) Nydegger .. B94
Chromotrope 10 B. *See under* Azo dyestuffs.
Chrysanthemum cinerariaefolium; Insecticidal principle produced on dry distillation of ——. Yamamoto and Sumi .. B845
Chrysin; Flavylium salts related to ——. Pratt and others .. B247
Chufa; Chemical examination of ——. Power and Chesnut .. B148
oil. *See under* Oils, Fatty.
Ciba colours. *See under* Indigoid dyestuffs.
Ciment fondu. *See* Cement, Fused.
Cinchona alkaloids and their derivatives; Preparation of reduction products of ——. (P) Boehringer u. Söhne B401
extract; Determination of alkaloids in ——. Recordati .. B150
Cinematograph colour films; Manufacture of ——. (P) Thornton B538
films:
(P) Coberly B36
(P) De Sperati B655
Cineol; Determination of —— in essential oils:
Cash and Fawsitt B926
Walker B75
a-Naphthol method of determining —— in essential oils. Cocking B233
Cinnamic acid and its salts; Antiseptic action of ——. Waterman and Kuiper B534
Cinnamic aldehyde; Action of aqueous sulphurous acid on ——. Cross and Engelstad 254T
Cinnamyl alcohol; Utilisation of cassia oil for synthesis of ——. Hill and Nason B997
Citral; Condensation of —— with ketones and synthesis of some new ionones. Hibbert and Cannon B232
Citrates; Studies of sparingly soluble —— readily obtained from hot solutions of reacting substances. Chatterjée and Dhar .. B964
Citric acid content of milk powders. Stewart B960
Differentiating tartaric acid and ——. Stevens B277
fermentation. Butkewitsch B69
Citronella oil. *See under* Oils, Essential.
Citronellal; Determination of —— in citronella oil. Dupont and Labaune B926
Citronellol; Analogues of —— richer and poorer in carbon. Von Braun and Gossel B400
Oxidation of —— in stages. Kotz and Steche B576
Synthesis of inactive ——. Verley B615
Citrus fruit; Use of ethylene in colouring ——. Chace and Denny B439
Citrus medica acida; Extraction of pectin from the rind of the fruit of ——. Hardy B533
Clarifying agents; Treatment of spent ——. (P) Chappell and others B460
Classifying. *See* Grading.
Clay; Absorption of sulphur gases by ferric oxide in ——. Jackson B672
of acid soils; Nature of acidity of colloidal ——. Bradfield .. B188
Analysis of diaspore ——. Thornberry B175
Behaviour of calcium compounds in —— on firing. Jackson B675
Behaviour of ferric hydroxide, manganese dioxide, and humus sols towards ——. Udluft B595
Bonding effect of ball —— in fired bodies. Sortwell B380
and clay-grog bodies; Properties of ——. Schramm B513
Coagulation of —— and phenomena of base exchange and hydration. Gallaiy B1022
Composition and properties of ——. Joseph and Hancock .. B910
Decomposition of ——. (P) Hess B334
Effect of concentration of colloidal —— of soils upon its hydrogen-ion concentration. Bradfield B268
flint-; Secondary expansion of ——. Harvey B672
and the like; Preparation of —— for moulding. (P) Roth A.-G. B559

PAGE

Clay—*continued.*
Physical properties of ——. Ackermann .. B175
Plasticity as a means of control of properties of ——. Bingham B672
Preparation of aluminium chloride from ——. Budnikoff .. B292
Production of aluminium, silicon, and other elements from ——. (P) Hooper .. B717
Rational analysis of ——. Tilley and Sullivan .. B513
Sedimentation as a means of purifying ——. Hind .. B672
sewer pipe manufacture. Influence of different salt-glazing temperatures upon the colour and gloss of glazes obtained on clays with varying contents of silica, alumina, and iron oxide. Schurecht .. B673
Treatment of colloidal ——. (P) Weir and Black .. B503

Clays; Action of heat on ——. Boudouard and Lefranc .. B134
bauxites, etc.; Behaviour of —— on heating. Houldsworth and Cobb .. B175
Colloid-chemical characterisation of technical ——. Ostwald and Pickenbrock .. B597
Colloidal plasticity of ——. Bigot .. B134
Influence of alkalis and alkaline earths on fusion temperatures of different types of refractory ——. Watts .. B57
Measurement of heat absorbed and evolved by —— during firing and cooling. Navias .. B175
Relation of texture and composition of ——. Grout .. B380
Sillimanite development in some typical ——. Kraner .. B981

Cleaning solvents; Recovering dry ——. (P) Allien, and Darco Corp. .. B331

Clove oil. *See under* Oils, Essential.

Coagulation; Mechanical condition of coagula and its bearing on the theory of complete ——. Bhatnagar and others .. B497
and surface tension. Amar .. B229
and vegetable life. Amar .. B437

Coal; Action of nitric acid on ——. Hendrickson .. B43
Agglomerating ——:
(P) Chance .. B8
(P) Wood and others .. B662
Analysis of fusain of ——. Beet .. B973
analysis. Kattwinkel .. B361
Apparatus for automatic determination of water in ——. Schaefer .. B973
Apparatus for carbonisation of ——. (P) Owen .. B588
Apparatus for distillation of ——:
(P) Cantieny, and Kohlenscheidungs-Ges. .. B589*
(P) Mehner .. B821
(P) Nagel .. B821
(P) Rühr .. B325
(P) Rühr, and Kohlenscheidungs-Ges. .. B860*
Apparatus for removing water from —— after the washing process. (P) France and Lecocq .. B587
ash; Determination of fusibility of ——. Mertens .. B623
ash; Furnace for determination of fusing point of ——. Kaplan B775
brown; Transformations caused by heating mixtures of paraffin wax and —— in the presence of hydrogen or carbon monoxide in closed vessels. Waterman and Kortlandt .. B898
Calorimetric apparatus for measuring heat of carbonisation of ——. Davis .. B658
Carbonisation of ——:
(P) Davies .. B500
(P) Fenton .. B409
(P) Greene and Laucks .. B365
(P) Hildebrandt .. B123
(P) Illingworth, and Illingworth Carbonization Co. B589*
(P) Wallace and others .. B548
Carbonisation of bituminous ——. (P) Rusby .. B778
carbonisation; Graded temperatures in ——. Tupholme .. B161
Carbonisation of —— and production of high-grade gas. (P) Rude .. B740*
Cellulose of ——. Schulz and Hamackova .. B407
Chemical structure of lignin and ——. Schrauth .. B42
Cleaning —— by the Conklin flotation process. Dowies .. B973
Composition of banded bituminous ——. Winter .. B407
concentrating plant; Discharge-controlling apparatus for ——. (P) France .. B822*
Concentration of ——. (P) Steuning, and Minerals Separation, Ltd. .. B587
Concentration of —— by flotation. (P) Williams, and Minerals Separation, Ltd. .. B121
Constituents of coal bitumen and their function in the caking and swelling of ——. Fischer and others .. B974
Continuous treatment of —— by hydrogenation or distillation, under pressure. (P) Erdöl- u. Kohle-Verwertung A.-G., and Debo .. B410
Decomposition of sulphur compounds in —— by heat. Jolly and Wheeler .. B498
Destructive distillation of ——. (P) Davidson .. B8
Destructive distillation of oil from bituminous ——. (P) Stalll .. B459
Determination of agglutinating power of ——:
Meurice .. B545
St. Claire-Deville .. B545, B545
Determination of capacity for atmospheric oxidation of ——. Charpy and Decorps .. B498
Determination of moisture, ash, and volatile matter in ——. Gontal .. B545
Determination of nitrogen in ——:
Baranov and Mott .. B206
Donovan .. B240
Foxwell .. B119
Hünerbein .. B4
Determination of total sulphur in ——. Foerster and Probst B43
Determination of volatile matter in ——:
Durand .. B43
Kreulen .. B817

Coal—*continued.* PAGE
Device for deflecting, opening, and crushing —— during distillation or semi-distillation. (P) Wollaston .. B209
Devices for washing —— and for like purposes. (P) Swallow B739
Dewatering of ——. (P) Wood, and Minerals Separation, Ltd. B974
disintegrator and feeder. (P) Farner and Hunziker .. B458
distillates or slimes and raw products obtained therefrom; Purifying and hydrogenating ——. (P) Internationale Bergin Co., and Hofsäss .. B503
Distillation of ——. (P) Pape .. B8
distillation; Heating rotary kilns for ——. (P) Holzwarth, and Lignite Coal and By-Products Corp. .. B501
distillation purposes; Rabble for low-temperature ——. (P) Barrs .. B245*
distillation; Recovery of by-products of ——. (P) Comp. de Béthune .. B819
Distribution of phosphorus in —— and its removal. Cawley B585
Drying and pulverising ——. (P) Atkinson and others .. B930
dust; Furnaces for burning ——. (P) Belavoine .. B40
dust; Supply of —— and air in Siemens-Martin and like furnaces. (P) Fellner und Ziegler .. B951*
dust; Utilisation of —— in smelting and refining metals. (P) Krupp A.-G. Grusonwerk .. B262
Effect of salty —— upon refractory materials. Wilson .. B514
Electrostatic separation of mixtures of shale and ——. (P) South Metropolitan Gas Co., and others .. B735
Examination of constituents of banded constituents of a Derbyshire. Greenwood .. 363T
Extraction of —— by benzene under pressure. Bone and others .. B584
Extraction of —— by solvents. Lategan .. B324
Factors in spontaneous combustion of ——. Hood .. B206
Flotation of ——. (P) Gross .. B777
Froth flotation process for removal of ash constituents from ——. (P) Gelsenkirchener Bergwerks-A.-G., Abteil. Schalke .. B818
Gasification of bituminous ——. (P) Rusby .. B663
gasification. The regenerative system at Aylesbury. Lane and others .. B659
Gasifying ——. (P) Soc. Anon. de Construction de Fours à Coke "Simplex" .. B662
General physical phenomena associated with plastic state of ——. Foxwell .. B738
Genetic relationships of lignite and ——. Erdmann .. B622
Heating gases employed in continuous distillation of ——. (P) Lengersdorff und Co. .. B409
Hydrogenating gas for decomposing ——. (P) Bergius .. B664
Ignition of ——. Wheeler .. B896
Influence of addition of inert matter upon quantity of volatile matter evolved on heating ——. Webster and Wigginton B407
Influence of ash-content of —— on the estimated volatile matter. Kreulen .. B206
Influence of preheating unoxidised and partially oxidised —— upon its rate of absorption of oxygen. Coles and Graham B973
Influence of temperature on yield of low-temperature tar from gas ——. Broche .. B161
and the like; Apparatus for washing ——:
(P) Henry .. B85*
(P) Wilmot .. B822*
(P) Wilmot and Blatch .. B822*
and the like; Preparation of colloidal soluble acid products containing carbon from ——. (P) Beer Söhne .. B45
or the like; Separation of ——. (P) Lequeux .. B896*
-like substances; Manufacture of —— and by-products from vegetable matter. (P) Beaudequin .. B702
Loss of heating value of bituminous —— on exposure to air. Byrne and Davis .. B775
Low- or medium-temperature distillation of bituminous ——. (P) Starkey .. B365
Low-temperature carbonisation of ——. Neufeld .. B739
Low-temperature carbonisation of S. African ——. Lategan B324
Low-temperature coking of Hungarian ——. Laszlo .. B284
Low-temperature distillation of Farmville (N.C., U.S.A.) ——. Giles and Vilbrandt .. B775
Machine for pulverising ——. (P) Griffin .. B7
Machines for compressing, briquetting, or disintegrating ——. (P) Sutcliffe .. B245*
Manufacture of gas from ——. (P) Travers and Clark .. B244
Method of treating ——. (P) Nagel .. B740
Methods of analysis of ——. Fuel Research Board .. B206
mines; Pyrites as a cause of spontaneous combustion in ——. Graham .. B658
Mixing different kinds of —— for determination of the volatile matter. Kreulen .. B83
Normal water content of ——. Schoorl .. B817
Obtaining oils from non-coking ——. (P) Edwards and Young B84
from an oil shale. Gaisser .. B817
Origin of ——. Behaviour of cellulose and lignin during decay. Fischer .. B584
and other minerals; Machine for sorting ashpit waste of coal-burning furnaces and for washing and cleaning ——. (P) Fauquet .. B7
Oxidisable constituents of ——. Absorption of oxygen by fusain. Graham .. B658
Physical properties of powdered —— of varying degrees of fineness, and distribution of ash and volatile matter among the fractions of different size. Roszak .. B498
Plant for carbonisation of ——. (P) Illingworth .. B45
Plastic state of ——. Foxwell .. B4, B896
Plastic state of ——. Path of travel of gases in the coke oven. Foxwell .. B738
Plastic state of ——. The plastic curve. Foxwell .. B737
Plastic state of ——. Temperature of formation and path of travel of principal by-products. Foxwell .. B738

PAGE

Coal—*continued.*
powdered; Firing with —— for water-tube boilers and metallurgical furnaces. Hollands .. B324
Powdered —— as fuel for power plant boilers. Krebsinger and others .. B585
powdered. Propagation of a zone of combustion in ——. Minimum temperature for combustion. Sinnatt and Slater .. B896
powdered; Terminal velocity of particles of —— falling in air or other viscous fluid. Blizard .. B240
powdered; Tests on a plant for ——. Kreisinger and others B206
Preparation of —— for coking. (P) Dannettell and Cain .. B14
Preparation of humic acids from ——. Tropsch and Schellenberg B323
Preparation of resins and waxes from bituminous ——. (P) Jena .. B641
Pre-treatment of caking —— for distillation. (P) Zeche Stinnes, and Weindel .. B778
Producing mixtures of oil and ——. (P) Berl .. B500
Pulverisers for ——. (P) Deutsche Babcock- u. Wilcox Dampfkessel-Werke A.-G. .. B456
Pulverising ——. (P) Duffield .. B81
Pulverising —— and feeding it for combustion. (P) Aero Pulveriser Co. .. B818
Purifying ground —— by agglomeration in a bath of water mixed with oil. (P) Soc. de Recherches et de Perfectionnements Industriels .. B208
Quantity and nature of gas evolved by —— under the action of heat or of a vacuum. Lebeau .. B206
Recovering the ammonia content of ——. (P) Torrey, jun., and Semet-Solvay Co. .. B502
Recovering —— from waste. (P) Thornley .. B41
Recovery of —— from mixtures. (P) Eldred .. B898
Recovery of oil contained in agglomerates obtained by churning pulverised coal in a bath of water mixed with oil. (P) Soc. de Recherches et Perfectionnements Ind., and Bascou B548
research; Application of micro-analysis to ——. Dolch and Strebinger .. B931
Retort for distillation of bituminous ——. (P) Garland .. B8
Retorts for treatment of ——. (P) Gay-Pelt .. B1004
samples; Influence of particle size of —— on yield and character of coke and on the ash content. Kreulen .. B775
samples; Size of particles in ——. Kreulen .. B896
Sampling of ——. Coste and others .. B83
Separation of excess liquid from washed fine ——. (P) Futers, and Semet-Solvay and Piette Coke Oven Co. .. B662
Separation of —— from waste by flotation. (P) Diehl .. B208
Significance of cellulose remains found in ——. Tropsch .. B896
Silver sulpho-chromic oxidation of ——. Simon .. B283
slimes; Apparatus for concentrating —— by froth flotation. (P) Vereen. Kohlenmaatschappij .. B787
slimes and the like; Apparatus for draining ——. (P) Minikin .. B860*
Specific gravity and ash content of ——. Drakeley and Hepburn 277T, B775
Spontaneous combustion of ——. Graham .. 79T, B658
Errata 112T
Standardisation of methods of testing ——. Berthelot .. B774
Standardised method for air-drying ——. Stansfield .. B623
State of combination of sulphur in Arsa (Istrian) —— and its behaviour on dry distillation. Ditz and Wildner .. B699
Study of destructive distillation of ——. Evans .. B240
Sulphochromic oxidation of ——. Simon .. B206
Sulphochromic oxidation of —— in presence of catalysts for determination of carbon. Florentin .. B454
Sulphur compounds in —— and their transformations during destructive distillation. Wibaut .. B775
Sulphur forms in ——. Yancey and Parr .. B541
Tar oils from low-temperature carbonisation of S. African ——. Lategan .. B411
Technical determination of moisture content of ——. Blacher and Girgensohn .. B585
Thermal conductivity and specific heat of ——. Sinnatt and Macpherson .. B119
Thermal reactions during carbonisation of ——. Davis and Place .. B623
Transformation of ligneous plant substances into ——. Production of coal-like products from cellulose. Schwalbe and Schepp .. B240
Treatment of ——:
(P) Price, and Minerals Separation North American Corp. .. B704*
(P) Trent, and Trent Process Corp. .. B208
Treatment of —— and manufacture of briquettes:
(P) McIntire, and International Coal Products Corp. .. B244
(P) Smith, and International Coal Products Corp. .. B214
Treatment of —— with naphthalene. Oswald and Pinta B499, B931
Treatment of small or finely divided ——. (P) Stennlag and others .. B1006*
Ultimate constituents of ——. Pearson .. B699
Utilisation of low-grade and waste —— in power production. Coales .. 157T, B498
Utilisation of shale and low-grade ——. (P) Hampdon .. B662
Vertical retort for distillation and gasification of ——. (P) Stürmer .. B286
Volatile matter and ash contents of samples of —— from the same seam. Drakeley and Hepburn .. 131T, B931
washing; Application of froth flotation to ——. Dessagne .. B817
washing machines. (P) Ferguson .. B285
X-ray analysis of ——. Kemp .. 234T, B283, B931
Yield and quality of coke in relation to the grading of the ——. Lambris and Müller .. B361
Coals; Behaviour of some —— on heating under pressure without solvents. Von Walther and Steinbrecher .. B775
Chemical classification of ——. Seyler .. B544
Coating compositions; (P) Brittou, and Griffiths Bros. and Co., London, Ltd. .. B101*

PAGE

Coating—*continued.*
compositions for netting for aircraft construction. (P) Emerson B628
compositions; Manufacture of ——. (P) Holzapfel .. B141
compositions; Protective ——. (P) Gardner .. B527
compositions; Waterproof ——. (P) Schmidt and Schmidt .. B265
material; Manufacture of liquid waterproof —— for cement, etc. (P) Tloka .. B987
rare earth metals and their alloys with other metals. (P) Kunheim and Co. .. B523
and treating materials. (P) Herman .. B221
walls, paper, or other surfaces with resinate paint. (P) Exley and Rimmer .. B392
wire and other drawn and rolled sections with other metals. (P) Cowper-Coles .. B601
wood, leather, and the like; Production of material for ground ——. (P) Eggers and Burlin .. B104
Coatings on etched metallic surfaces; Production of protective ——. (P) Ges. für Technik .. B104
Removing —— from bodies. (P) Leuher .. B47
Cobalt in alloy steels. Vogel .. 368T
Colorimetric determination of ——. Auger and Odinot .. B318
Colour reaction of —— with dimethylglyoxime in presence of sulphides. Feigl and Von Tustanowska .. B580
Critical studies on methods of determining ——. Congdon and Chen .. B317
Detection of nickel and —— separately and in presence of one another. Falli .. B540
Electrometric titration of —— with potassium cyanide. Müller and Schluttig .. B772
Hardness of electrodeposited ——. Macnaughtan .. B519
Influence of —— on properties of high-speed steel. Oertel and Pölzguter .. B912
-nickel ores; Recovering values from ——. (P) Caron, and Clevenger and Caron .. B429
-plating baths; Use of oxygen electrode in determining acidity of ——. Montillon and Cassel .. B98
Quantitative separation of very small quantities of copper, zinc, nickel, and —— from a complex mixture. Bertrand and Mokragnatz .. B79
Separation of —— from nickeliferous ores by the purpureo-cobalt chloride process. Morgan and Main Smith .. 131T, B427
Cobalt bromide; Equilibrium in reduction of —— by hydrogen. Crut .. B670
Cobalt chloride; Equilibrium in reduction of —— by hydrogen. Crut .. B570
Cobalt driers; "Skinning" of oil varnishes and use of ——. Brendel B433
Cobalt triacetate; Electrolytic production of —— from the diacetate. Schall and Markgraf .. B417
Cobaltic lakes of mordant azo dyestuffs. Morgan and Main Smith .. B931
Cocaine; Local anaesthetic properties of isocaine, procaine, butyn, and ——. Schmitz and Loevenhart .. B996
Synthesis of natural ——. Willstätter and others .. B73
l-Cocaine; Manufacture of synthetic ——. (P) Merck and others .. B577
ψ-Cocaine; Preparation of synthetic *d*- and *l*- ——. (P) Merck .. B615
Cocaine hydrochloride; Variation of anaesthetic power of —— with the hydrogen-ion concentration. Régnier .. B766
Cocoa; Apparatus for treating solid material, *e.g.* —— in a finely divided state with heating or cooling gases, *e.g.*, air. (P) Hollstein, and Lehmann Co. .. B71
Determination of shell in ——. Weber and Böttcher .. B689
Determination of xanthine bases in ——. Schaap .. B349
Examination of ——:
Beythien and Pannwitz .. B111
Galanos .. B1026
Manufacture of liquefied ——. (P) West .. B651
powder; Determination of cacao husk in ——. Ezendam .. B650
See also Cacao.
Coconut husk; Retting —— for production of coir. Fowler and Marsden .. B741
oil. *See under* Oils, Fatty.
Coconuts; Liquid from ripe ——. Matthews .. B533
Cod liver oil. *See under* Oils, Fatty.
Codeine compound with the properties of a salt; Preparation of a ——. (P) Hinsberg .. B355
Co-enzyme of yeast; Fermentation ——. Von Euler and Myrbäck B724, B761
Coffee beans free from caffeine; Preparation of ——:
(P) Lombaers, and Ind.- en Handel Maatschappij "Ifaj" .. B962
(P) Wimmer, and Coffee Products Corp. .. B764
Determination of caffeine in ——. Lukas .. B489
Factors which influence the curdling of cream in ——. Burgwald B397
tree; Presence of guanosine in the green leaves and berries of the —— and its relation to origin of caffeine in this plant. Camargo .. B312
Coir; Retting coconut husk for production of ——. Fowler and Marsden .. B741
Coke; Apparatus for cooling —— by direct contact with gases. (P) Still and Hölscher .. B287*
Apparatus for cooling incandescent ——. (P) Sulzer Frères B121, B460*
Apparatus for cooling incandescent —— by means of inert gases. (P) Fülscher .. B822*
Apparatus for cooling and utilising heat of incandescent ——. (P) Sulzer Bros. .. B551*
breeze and the like; Apparatus for washing ——. (P) Jennings B934
briquettes; Manufacture of strong —— from non-caking small coal. (P) Plochmann .. B662
Causes of varying reactivity of ——. Bunte and Fitz .. B499
Cell structure of by-product ——. Mallels .. B856

PAGE

Coke—*continued.*
Centrifugal separators for separating —— from clinker. (P) Arpin .. B158
Chamber for dry cooling of ——. (P) Moetteli .. B245*
Combined press and retort for manufacture of ——. (P) Cureton and Rowlson .. B548
Combustibility of ——:
Broche .. B4
Fielduer .. B96
Container for dry cooling of ——. (P) Moetteli .. B245*
Cooling of —— from coke-oven plants. (P) Collin and Co. .. B777
Cooling incandescent ——. (P) Sulzer Frères .. B122
cooling plants. (P) Sulzer Frères .. B45
Determination of combustibility of ——. Häusser .. B546
Determination of nitrogen in ——. Foxwell .. B119
Determination of total sulphur in ——. Foerster and Probst .. B43
Distillation oven for manufacture of gas and ——. (P) Gewerkschaft ver. Constantin der Grosse .. B664
Effect of combustibility of —— on stock descent in blast furnaces. Royster and Joseph .. B470
Effect of structure and surface on combustibility of ——. Than B324
Electrical conductivity of wood charcoal and ——. Durrer .. B523
from gas retorts, coke ovens, or the like; Apparatus for quenching ——. (P) Williams, and Jenkins and Co. .. B593*
Gasification of —— in steam, with special reference to rates of gasification and composition of the gas. Pexton and Cobb .. B659
Improving —— as fuel for stoves and the like. (P) Habets .. B819
Influence of temperature of coking on properties of blast-furnace ——. Berger .. B699
lignite-; Suitability of —— as active charcoal. Fischer and Zerbe .. B43
or the like; Containers for dry cooling of ——. (P) Sulzer Bros. B780*
Low-temperature production of ——. (P) Lamie .. B663
making; Sodium cyanide as by-product of ——. Mueller .. B660
Manufacture of good metallurgical —— from Saar coal. (P) Evertz .. B778
Manufacture or treatment of —— to increase its combustibility, and manufacture of gas from coke. (P) N. V. Silica en Ovenbouw Mij .. B974
Means for discharging —— from gas retorts. (P) Ride and Bell, Ltd., and Ride .. B210*
Normal water content of ——. Schoorl .. B817
or other substances which are good conductors of electricity; Apparatus for separating —— from ashes or other substances which are non-conductors or poor conductors of electricity. (P) Leburge .. B44
-oven batteries; Regenerative retort ——. (P) Van Ackeren, and Koppers Co. .. B587
-oven batteries; Retort ——. (P) Koppers Co. .. B625
-oven gas. *See under* Gas.
-oven heating flues. (P) Fabry .. B858
-oven retorts. (P) Koppers Co. .. B777
-oven walls; Refractory blocks for ——. (P) Thornton and Illingworth .. B675
-ovens:
(P) Koppers .. B587
(P) Koppers Co. .. B777
(P) Kus, and Chicago Trust Co. .. B163
(P) Roberts, and Chicago Trust Co. .. B48*
(P) Sato .. B704*
(P) Still and Petsch .. B900*
(P) Wilputte .. B777
ovens; Apparatus for use in ——. (P) Kernohan .. B458
ovens; By-product ——. (P) Kevorkian .. B45
ovens; Collecting main for ——. (P) Suber and Mercer .. B121
ovens; Gas reversing device for regenerative ——. (P) Collin and Co. .. B931*
ovens; Heating —— with a mixture of rich gas and flue gases. (P) Heitmann .. B548
ovens; Heating system for retort ——. (P) Becker, and Semet-Solvay Co. .. B364
ovens; Horizontal —— with vertical heating flues. (P) Still .. B899
ovens; Narrow ——. Evans .. B775
ovens; Path of travel of gases in ——. Foxwell .. B738
ovens; Regenerative ——. (P) Baglin .. B662
ovens; Sole-heated ——. (P) Von Bauer and Zwillinger .. B163
ovens; Temperature of formation and path of travel of principal by-products in ——. Foxwell .. B738
Production of ——:
(P) Perry, and Barrett Co. .. B975*
(P) Trent, and Trent Process Corp. .. B124*
Production of ammonia from ——. (P) A.-G. für Brennstoffvergasung .. B124
Production of ashless —— for metallurgical purposes. (P) Chem. Fabr. Kalk, and Oehme .. B408
Production of high-grade blast-furnace ——. Chance .. B699
Production of —— at a low temperature. (P) Helbig .. B625
Production of semi-coke or ——. (P) Trent, and Trent Process Corp. .. B208
Reactivity of ——:
Arend and Wagner .. B973
Bähr .. B160
Reduction or hydrogenation of ——. (P) Fischer and Schrader B84
semi-; Increasing the density of —— without applying pressure. Fischer and Krönig .. B973
semi-; Manufacture of gas, low-temperature tar, and ——. (P) Rude .. B365, B588
semi-; Production of —— which can be readily ground. (P) De Grahl .. B821
Specific heat of ——. Schläpfer and Debrunner .. B240
Standardisation of methods of testing metallurgical ——. Berthelot .. B774

Coke—*continued.*
Structure and combustibility of ——:
Agde .. B4
Heyd .. B4
Schreiber .. B4
surfaces and structures; Interpretation of ——. Than .. B324
Yield and quality of —— in relation to the grading of the coal. Lambris and Müller .. B361

Coking retort oven batteries with regenerators. (P) Becker .. B820
retort ovens. (P) Becker .. B703, B820, B898
retorts; Heating continuous low-temperature ——. (P) Still .. B409
Colchicine; Constitution of ——. Windaus .. B805
Cold-storage purposes; Report on heat insulators for ——. Griffiths B983
Colemanite; Separating —— from its gangue. (P) Rasor, and Pacific Coast Borax Co. .. B420
Collagen; Hydrolysis of —— by trypsin:
Marriott .. B188
Seymour-Jones .. B267
Collodion membranes of high permeability. Nelson and Morgan, jun. .. B235
membranes with uniform distribution of pores. Bartell and Van Loo .. B280
Colloid content of expressed plant juices; Method of determining hydrophilic ——. Newton and Gortner .. B309
mills. (P) Burt, Boulton and Haywood, and China B929, B929
Pollopas, a new synthetic ——. Pollak and Ripper .. B878
Colloidal carbon products; Metallisation of ——. (P) Beer Söhne B402
character; Viscosity-temperature relation and its bearing on ——. Drummond .. 324T
clay; Effect of concentration of —— upon its hydrogen-ion concentration. Bradfield .. B268
clay; Treatment of ——. (P) Weir and Black .. B503
copper solutions; Preparation of ——. (P) Badische Anilin- und Soda-Fabr. .. B279
dispersions of asphalt or pitch, Production of ——. (P) Plauson's Forschungsinst. .. B327, B503
dispersions; Concentrating and refining ——. (P) Plauson's Forschungsinst. .. B82
dispersions; Process of producing —— and disintegrators therefor. (P) Hinchley, and Plauson's (Parent Co.), Ltd. .. B2
ferric oxide sols; Constitution and stability of ——. Pauli and Rogan .. B907
ferrous sulphide prepared in presence of gelatin. Saidatani .. B114
ferrous sulphide prepared in presence of gelatin; Pharmacological investigations on ——. Saidatani .. B232
gels. *See under* Gels.
gold; Oxide content of ——:
Pauli .. B889
Thiessen .. B889
iron; Cellulose and ——. Bolton and Dorée .. B863
lead arsenate; Preparation and properties of —— for sprays. Brinley .. B311
lime preparations; Production of ——. (P) Donath .. B692
matter; Separation of —— from liquids. (P) Barber .. B584*
metal hydrosols; Protected —— for medicinal use. Voigt .. B925
metal sols; Preparation of ——. (P) Schornstein .. B314
metals; Electrolytic manufacture of ——. (P) Von Hoessle B578
micelles; Synthesis of ——. Silver micelles. Reblère .. B848
oxides; Absorption of gases by —— and mode of action of electric accumulators. Bary .. B263
silica. Diénert and Wandenbulcke .. B254
silicic acid and a method for its preparation. Schwarz .. B292
silver preparations; Concentration of silver ions in ——, with special reference to their medicinal use. Schlee .. B925
silver; Staining wood by means of ——. Von Weimarn .. B629
sols; Determination of size and distribution of size of particles in —— by centrifugal methods. Svedberg and Nichols B117
sols of metals; Production of ——. Füth .. B615
soluble acid products containing carbon; Preparation of —— from coal and the like. (P) Beer Söhne .. B45
soluble salts of heavy metals; Preparation of ——. (P) Riedel A.-G., and Boedecker .. B890
solutions; Centrifugal machine for production of ——. (P) Westenholz and Nyrop .. B230
solutions of ferric oxide; Manufacture of ——. (P) Brüning, and Aktieselskabet Hydropeat .. B95*
solutions; Formation of —— by electrical pulverisation in the high-frequency alternating-current arc. Kraemer and Svedberg .. B951
solutions of iron oxide; Production of ——. (P) Stadnikoff and others .. B17
solutions; Preparation of —— by atomisation of solids by shaking with liquids. Gurwitsch .. B117
solutions; Production of ——. (P) Scheidemandel .. B930
solutions and reversible dried residues; Production of ——. (P) Oderberger Chem. Werke A.-G. .. B360
solutions; Stability of ——. Aluminium hydroxide suspensions. Sen .. B941
solutions of suspensoid or emulsoid character containing electrolytes; Stable ——. (P) Plauson's Forschungsinst. .. B809
sulphur; Production of ——:
(P) Plauson's Forschungsinst. .. B712
(P) Vogel .. B174, B257
sulphur; Properties of ——. Rossi .. B378
suspensions; Manufacture of ——. (P) Smith .. B804
yellow mercuric iodide; Manufacture of ——. (P) Badische Anilin und Soda Fabr. .. B95, B633

Colloids; Effect of hydrophilic —— on size and distribution of particles in electrolytic precipitation. Gelatin and basic lead carbonate. France and McBurney .. B391

PAGE

Colloids—*continued*.
Preparation of neutral solid ——. (P) Chem. Werkstätten Ges. .. B822
Purification of active biological organic ——. Michaelis and Davidsohn .. B399
Colophony; Identity of abietic acids extracted from different kinds of ——. Dupont and Uzac .. B433
See also Rosin.
Colorimetry; Improvements in ——. Stanford .. B202
Colour; Apparatus for determination of —— in terms of dominant wave length, purity, and brightness. Priest .. B280
and constitution. Effect of isomerism on colour of certain azo dyestuffs. Crossley and Resenvelt .. B368
effects; Production of —— on paper and fabrics. (P) Meister, Lucius, und Brüning .. B332
filters; Preparation of —— from photographic plates. Schaede B279
lakes. *See under* Lakes.
standards for determination of iron; Defect in permanent ——. Whipple .. B765
standards; Permanent —— for hydrogen-ion determinations. (P) Badollet and others .. B998
Colouring matter of the blue pansy. Currey .. B780
matter in *Polysaccum crassipes*, D. C. Marchand .. B861
matters. *See* Dyestuffs.
Colours; Body ——. *See* Pigments.
Mills for grinding ——. (P) Torrance .. B238
oil-; Manufacture of ——. (P) Plauson .. B103
S.R.A. —— for dyeing cellulose acetate. Ellis .. B864
Columbia Yellow. *See under* Azo dyestuffs.
Columbium. *See* Niobium.
Combustible constituents in gaseous mixtures; Detecting or estimating and recording ——. (P) Uehling .. B772*
Combustion bomb; Micro- ——. Roth and others .. B928
of fuel in furnaces and the like. (P) De Coninck .. B932
of gaseous and liquid fuels; Maximum temperatures and pressures attainable in ——. Goodenough and Felbeck B817
gases. *See under* Gases.
at high pressures; Gaseous ——. Influence of varying initial pressures upon rate of pressure development and activation of nitrogen in carbon monoxide-air explosions. Bone and others .. B457
products; Treatment of ——. (P) Lombard .. B625
of solid fuels. (P) Bauu, and Westinghouse Electric and Manuf. Co. .. B214
Comminuting mill. (P) Newhouse, and Allis-Chalmers Manuf. Co. .. B816
Compressing materials to extract the liquids they contain; Apparatus for ——. (P) Lamy-Torrilhon .. B1019
Compressors; Centrifugal multistage —— for compressing air, gases, or vapours, or for producing heat or cold. (P) Vianello .. B160*
Effecting chemical reactions in the interior of ——. (P) Brutzkus .. B698
Concentrating devices. (P) Vogelbusch .. B157
liquors to high densities; Apparatus for ——. (P) Blair, and Blair, Campbell, and McLean, Ltd. .. B118
solutions; Apparatus for ——. (P) Bacon, and Solvay Process Co. .. B156
Concrete; Action of chlorine on ——. Gassner .. B383
Calcium chloride as agent for protecting —— from destruction by frost. Troche .. B713
Composition for colouring ——. (P) Master Builders' Co. B714
compound; Waterproof and dustless ——. (P) Kleinlogel .. B59*
Determination of cement content of ——. Kriege .. B598
and ferro-concrete; Slag-sand as aggregate in ——. Burchartz B599
Hard-grain ——. (P) Metallochem. Fabr. A.-G. .. B832
Hardening and bonding composition for treatment of ——. (P) Downes .. B789
Influence of temperature on rate of setting of Portland cement ——. Uchida .. B218
Influence of temperature on tensile strength of Portland cement ——. Uchida .. B219
made with "superior" cement; Strength of ——. Müller .. B713
Manufacture of lime-sand ——. (P) Caccia .. B983
Porous ——. (P) Wikkula .. B983
Production of waterproofing material for ——. (P) Newberry, and Medusa Concrete Waterproofing Co. .. B18
Shrinkage of ——. Kirsch .. B58
silos; Action of lactic acid on ——. Grün .. B410
structures and the like; Waterproofing composition for use in manufacture of ——. (P) Guy and Davey .. B58
Tests of impure water for mixing ——. Abrams .. B982
Waterproofing ——. (P) Hendrich .. B831
Condensation; Heat-exchangers for ——. (P) Von Niederhäusern und Co. .. B42
products of phenol and formaldehyde; Viscosity of syrupy ——. Drummond .. 323T
Condenser; New form of internal laboratory ——. Patterson .. 281T
Condensers. (P) Whitelaw, and Standard Oil Co. of Kentucky .. B407
for distilling oils of wide boiling range. Calderwood, jun. B656
Fractional ——. (P) Fuchs .. B622
Preparation and feeding of disincrustants for preventing and removing scale from ——. (P) Verderevsky and Saks .. B205
Condensing apparatus. (P) Tyler .. B42
apparatus; Corrugated pipes for ——. (P) Amor .. B699*
distilled vapours; Apparatus for ——. (P) De Béthune B119, B283*
process and apparatus. (P) McElroy, and Gulf Refining Co. B160
Congo colours. *See under* Azo dyestuffs.

PAGE

Conifers. *See under* Woods.
Conklin flotation process for cleaning coal. Downes .. B973
Constant-boiling mixtures; Application of —— to preparation of organic compounds. Wuyts .. B615
Contact substances; Revivification of ——. (P) Harter and Oehlrich .. B737
Controlling processes of production; Means for ——. (P) Logan B15
Coolers; Gas ——. (P) Howard, and Grasselli Chemical Co. .. B622
Cooling air or gases. (P) Ericsson and Dunker .. B405
apparatus. (P) Simon and Simon .. B3
apparatus; Corrugated pipes for ——. (P) Amor .. B699*
hot sludges; Apparatus for purifying and ——. (P) Meister, Lucius, u. Brüning .. B4
liquids; Apparatus for ——. (P) Robinson .. B83*
solid shapes; Charts for estimating temperature distribution in ——. Gurney and Lurie .. B39
Copal; Esterification of Congo —— and properties of the copal ester varnishes. Brendel .. B63
Oil from kauri ——. Gill and Nishida .. B63
Copper; Activation of oxygen by metallic ——. Wieland and others .. B74
and its alloys; Corrosion of ——. Evans .. 127T, B947
or its alloys; Electrolytic refining of ——. (P) Siemens u. Halske .. B793
alloys; Increasing the electrical conductivity of ——. (P) Metallbank und Metallurgische Ges. .. B561
and its alloys; Solution of ——. (P) Barth .. B389
alloys; Variation of hardness of —— with the temperature. Guillet .. B600
-aluminium alloys; Heat treatment of light ——:
Iytaka .. B520
Portevin and Le Chatelier .. B520
-aluminium alloys of intermediate composition. Stockdale .. B299
-aluminium alloys; X-ray studies on ——. Jette and others B299
-aluminium-magnesium alloys; Ternary ——. Ohtani .. B136
-aluminium-silicon alloys and other aluminium alloys; Comparative tensile properties of ——. Dix, jun., and Lyon B872
-aluminium-tellurium alloys; Properties and structure of ——. Sisco and Whitmore .. B791
-antimony alloys; Electrolytic preparation of ——. Mazzucchelli and Tonini .. B99
Behaviour of liquid ferrous sulphide, iron, cuprous sulphide, and ——. Tammann and Bohner .. B716
-cadmium alloys; Constitution of ——. Jenkins and Hanson B298
cellulose sludge; Treatment of ——. (P) Zart and others .. B669
Cementation of —— by salts of metals. Peczalski .. B560
cemented by salts; Electrical resistance and density of ——. Peczalski and Launert .. B913
-chromium-molybdenum alloys. Siedschlag .. B179
-chromium-nickel alloys. Siedschlag .. B179
Colorimetric determination of small quantities of —— in drinking water. Pyriki .. B845
concentrates; Smelting —— in a converter. Longworth .. B948
Corrosion of —— in sea water. Bengough and May .. B833
Deoxidation of —— and casting of copper articles. Guillet .. B472
Desulphurising ——. (P) Jackson and others .. B874
Detection of —— by means of pyramidone. Kolthoff and Hamer .. B968
Determination of —— in copper-tin alloys. Etheridge .. B750
Determination of cuprous and cupric oxides and metallic —— in mixtures. Nishida and Hirabayashi .. B132
Determination of —— as cuprous iodide. Winkler .. B317
Determination of —— with thiosulphate. Drawe .. B852
Determination of —— by titration with permanganate. Cuny B893
Determination of —— by Zecchini's method and its application to determination of reducing sugars. Fleury and Taverier .. B686
Diffusion and solution of aluminium, tin, and zinc in ——. Bauer and Piwowarsky .. B59
Diphenylcarbazide as a qualitative reagent for —— in presence of mercury. Kolthoff .. B202
Effect of iron on ——. Hanson and Ford .. B833
Effect of progressive cold-rolling on Brinell hardness of ——. Moore .. B833
Electrolytic deposition of ——. (P) Barth .. B753
Extraction of ——. (P) Greenawalt .. B475
extraction process; Greenawalt electrolytic ——. Greenawalt .. B258
Gravimetric determination of ——. Wilke-Dörfurt and Rhein B893
Hardness of electrodeposited ——. Macnaughtan .. B519
ions; Schoenbein's test applied to micro-detection and determination of ——. Imbert and others .. B236
-iron-lead alloys. Guertler and Menzel .. B259
Irregularities in deposition of —— in presence of tarry substances. Cerbaro .. B135
Leaching systems for ——. (P) Perkins and others .. B875
-lead-antimony; The ternary system ——. Schack .. B259
mattes; Constitution of ——. Edwards .. B519
Micro-analytical determination of nickel and —— in presence of each other. Strebinger and Pollak .. B969
Microchemical detection of ——. Rosenthaler .. B969
Micro-detection of ——. Feigl .. B236
Micro-gravimetric determination of —— as copper-benzoinoxime. Strebinger .. B236
mirrors on glass; Production of ——. (P) Chem. Werke vorm. Auerges., and Volmer .. B514
-molybdenum alloys. (P) Norske Molybdenprodukter A.S. B138
Nascent hydrogen sulphide for determination of ——. Doht .. B695
New function of ——. Studies in catalytic action. Komatsu B446
-nickel alloys. Hardness of mixed crystals at temperatures up to the melting point. Sauerwald and Kuehans .. B179

PAGE

Copper—*continued.*
-nickel catalysts; Dehydrogenating action of ——. Kita and others .. B755
-nickel-lead alloys. Guertler and Menzel .. B259
ores; Ammonia leaching of tailings from Calumet and Hecla ——. Benedict and Kenney .. B386
ores containing slimes; Leaching ——. (P) Taplin, jun., and Metals Production, Ltd. .. B475
ores; Treatment of ——:
(P) Greenawalt .. B340
(P) Ossa .. B601
(P) Perkins, and Metals Production Co. of North America .. B914*
Partition of —— between two different liquid metallic phases. Tammann and Schafmeister .. B873
Periodic variation in catalytic activity of ——, in decomposition of alcohol, with temperature of reduction. Palmer and Constable .. B848
pipes; Heat transference in small ——. Blake and Peters, jun. .. B773
-plated roofing elements; Manufacture of ——. (P) Gillis, and Anaconda Sales Co. .. B749
and platinum metals; Alloys of ——. (P) Deutsche Gold- u. Silber-Scheideanstalt .. B985
Promoting action of palladium on ——. Hurst and Rideal B418, B418
pyrites ore; Flotation process applied to treatment of middlings from ——. Treptow .. B178
Quantitative separation of very small quantities of zinc, nickel, cobalt, and —— from a complex mixture. Bertrand and Mokragnatz .. B79
Rapid electro-analytical separation of silver, bismuth, and —— by means of graded potentials. Lassieur .. B540
Reaction between metallic —— and ferric ion in dilute sulphuric acid. Nishida .. B519
Reaction between nitrogen peroxide and ——. Park and Partington .. B255
Recovery of —— from ferruginous copper slags. (P) Seelig .. B680
Recovery of —— from ores. (P) Greenawalt .. B181
Recovery of zinc in the separation of —— from copper-zinc alloys. (P) Andreas .. B950
Recrystallisation of γ-iron in comparison with nickel and ——. Schottky and Jungbluth .. B634
as reducing agent in iron determinations. Hendel .. B894
Reduction of thin films of oxide on ——. Tammann and Marais .. B600
Relation between tensile strength and electrical resistivity of commercially pure ——. Alkins .. B337
Sensitive reaction for ——. Fleming .. B695
Separation of iron, nickel, zinc, arsenic, and —— by precipitation with calcium carbonate and hydroxide. Schopper .. B178
Separation of —— from platinum metals. Swanger and Wichers .. B852
solutions; Preparation of colloidal ——. (P) Badische Anilin- u. Soda-Fabr. .. B278
telephone wires; Corrosion of —— by dust of potash fertilisers. Haehnel .. B636
-tin system; Equilibrium diagram of ——. Isihara .. B298
-tin-zinc alloys. Tammann and Hansen .. B871
Titration of —— by the thiocyanate process, and application to determination of dextrose. Fleury .. B453
Transport of —— in the gaseous state and as copper carbonyl. Bertrand .. B20
Treating sulphide ores of lead, silver, and ——. (P) Christensen B388
Treatment of ——. (P) Cunningham, and King .. B1017
Treatment of oxidised ores or other oxidised compounds of ——. (P) Edwards and Durant .. B637
Treatment of oxidised ores or other oxidised compounds of zinc and ——. (P) Edwards and Durant .. B601
Treatment of refined —— from copper oxide. (P) Perkins and others .. B914*
Uniting —— to steel. (P) Austin .. B1018
-zinc alloys which expand on solidification. Iokibe .. B297
-zinc ores; Treatment of ——. (P) Greenawalt .. B950
Zinc plating on ——. (P) Schlötter .. B301
Copper bichromate; Antiseptic power of ——. Sartory and Sartory .. B442
Copper-carbonyl; Supposed existence of ——. Mond and Heberlein B710
Copper compounds; Conversion of cupric sulphide into soluble ——. (P) Gluud and others .. B746
Copper oxide; Influence of dissociation of —— in gas analysis. Bunte and Wunsch .. B582
See also Cupric oxide.
Copper salts; Toxicity of ——. Elfront .. B689
Copper sulphate; Basic ——. Williamson .. B54
Normal and basic ——. Krüger .. B1011
Copra; Means for drying ——. (P) Elsworth .. B184
Preservation and preparation for transport and storage of —— by compression in bulk. (P) MacIlwaine .. B719*
Copyrine derivatives; Synthesis of ——. Lawson and others .. B442
Core oils; Preparation of ——. (P) Melamid .. B302
Corn. *See* Maize.
Corrosion of amalgamated zinc in acid and in alkali solutions; Effect of reduced pressure on rate of ——. Greene and Watts .. B1016
of boilers and treatment of boiler feed water. Winstanley .. B728
of brass as affected by grain size. Anderson and Enos .. B298
of brass; Dezincification in ——. Rixon .. B298
of copper and copper alloys. Evans .. 127T, B947
of copper telephone wires by dust of potash fertilisers. Haehnel B636
of copper, zinc, and brass in sea water. Bengough and May B833
Electrolytic theory of ——. Bancroft .. B836

Corrosion—*continued.* PAGE
Film protection as a factor in ——. Speller .. B947
of gas mains. Richardson .. B6
of iron alloys by copper sulphate solution. Kurtz and Zaimeyer B1015
of iron; Relation of hydrogen-ion concentration to ——. Shipley and McHaffie .. B599
of iron and steel by salt solutions in presence of oxygen. Evans 315T
of iron; Submerged ——. Whitman and Russell 193T, 197T, B946
of iron in water and in neutral salt solutions. Friend .. B97
Mechanism of metallic ——. Bengough and Stuart .. B136
of metals in photographic solutions; Effect of electrolysis on rate of ——. Crabtree and others .. B200
Microchemistry of ——. Desch .. B947
of Monel metal in photographic solutions. Crabtree and Matthews .. B733
of Muntz metal in sea water. Donovan and Perks .. 72T, B947
of non-ferrous metals; Atmospheric ——. Vernon .. B97
Relation between tarnishing and ——. Evans .. B913
resistance of electroplated coatings of zinc and zinc-mercury alloys. Wernlund .. B560
-resistant alloys for use in acid mine water. Anderson and Enos .. B1016
-resisting ferrous alloy. (P) Smith, and Ludlum Steel Co. .. B949
-resisting iron alloys; Tests for grading ——. Erickson and Kirst .. B1015
of steel in contact with copper; Natural water ——. Whitman and Russell .. B385
of steel; Effect of hydrogen-ion concentration on submerged ——. Whitman and others .. B677
of steel immersed in water; Effect of alkaline solutions on ——. Speller and Texter .. B947
test; Accelerated electrolytic ——. Anderson and Enos .. B1016
testing by immersion methods. Rawdon and Krynitsky .. B947
of wet gas-meters. Leybold .. B471
of zinc and lead in solutions of inorganic salts; Relative ——. Friend and Tidmus .. B337
Corrosive action of brackish water on metals. Perks .. 75T, B947
effect of gases absorbed by condensed steam in steam power plants having boilers fed therewith; Apparatus for eliminating ——. (P) Szikla .. B281
gases; Purifying ——. (P) Carbide and Carbon Chemicals Corp. B422*
liquids; Retort for distilling ——. (P) Howard, and Grasselli Chemical Co. .. B159
Corundum; Production of emerald green ——. (P) Elektrochem. Werke, and others .. B422
Preparation of a green —— with a colour similar to that of epodite. (P) Elektrochem. Werke, and others .. B379
Cotton; Absorption of vapours of various liquids by ——. Brimley B903
Action of *B. subtilis* on ——. Trotman and Sutton .. 192T
Adsorption of aluminium hydroxide from aluminium sulphate solutions by ——. Schwalbe .. B372
Alcohols present in wax of American ——. Fargher and Probert B640
Chemical analysis of ——. Determination of fat, wax, and resin. Clifford and others .. B372
Chemical analysis of ——. Determination of nitrogen in cotton. Ridge .. B371
Chemical analysis of ——. Micro-analytical methods for examination of small quantities of waxes, in particular cotton wax. Fargher and Higginbotham .. B370
Chemical analysis of ——. Phosphorus content of cotton. Geake .. B371
Cleaning and conditioning ——. (P) Cotono Corp. .. B170*
Constituents of wax of Egyptian Sakellarides ——. Fargher and Higginbotham .. B903
Determination of copper number of ——. Clibbens and Geake .. B211
Differences in dyeing properties of flax, hemp, and ——. Bartunek .. B375, B593
dyeing; Temperature coefficient in substantive ——. Auerbach .. B465
dyes; Fixation of substantive ——. Ruggli and Fischli .. B555
Effect of treatment with sulphuric acid on breaking load of ——. Vincent .. B552
fabrics; Changes which occur in —— during calendering and beetling. Huebner and Malwin .. B170
fabrics; Production of linen effects on ——. (P) Calico Printers Assoc., and Fourneaux .. B508
fabrics; Tendering of —— by acids. Coward and others .. B88
fabrics; Treatment of ——. (P) Van Heusen .. B742
fibre; Improving the ——. Knecht .. B1008
fibre; Salt content of ——. Kearney and Scofield .. B937
Fixation of colours on ——. (P) Bayer und Co. .. B509
hairs; Breaking load of single ——. Clegg .. B212
hairs; Swelling of —— in solutions of potassium hydroxide. Collins and Williams .. B505
Hydration of bleached and scoured ——. Justin-Mueller .. B1008
Influence of micro-organisms in weathering of ——. Trotman and Sutton .. 190T, B505
Lustre produced in —— by mercerisation. Barratt .. B593
Measurable characters of raw ——. Approximation to original cell diameter. Calvert and Harland .. B212
Measurable characters of ——. Determination of area of cross section and hair weight per centimetre. Clegg and Harland .. B88
Mechanical disintegration of ——. Warr .. B705
Mechanical powdering of ——:
Cross .. B705
Fort .. B506
Moisture relations of ——. Absorption and desorption of water by soda-boiled cotton. Urquhart and Williams .. B903
Moisture relations of ——. Taking up of water by raw and soda-boiled cotton at 20°. Urquhart and Williams .. B372
Physical causes of lustre in ——. Adderley .. B506

Cotton—*continued*.
Prolonged action of moderate heat on bleached ——. Knecht .. B553
Sorption by ——. Coward and others B88
Tissue fluids of Egyptian and Upland —— and their F_1 hybrid. Harris and others B607
Viscosity of solutions of —— in aqueous cuprammonium hydroxide and its significance as a test of textile quality. Farrow and Neale B506
wax; Constituents of American (Mississippi Delta) ——. Clifford and Probert B795
Cottonseed meal; Effect of autoclaving on toxicity of ——. Dowell and Menaul B195
meal poisoning. McGowan and Crichton B439
Methods adopted in Australia for disinfecting ——. Brittlebank and Adam B484
oil. *See under* Oils, Fatty.
Quantitative variation of gossypol and its relation to oil content of ——. Schwartze and Alsberg B22
Relation between toxicity of —— and its gossypol content. Schwartze and Alsberg B885
Coulteria tinctoria; Pods of —— as tanning material. Helm and Cerecelet B841
Coumarone-resin. *See under* Resin.
Council of the Society; Report of the —— 220T
Counter-current apparatus for extraction etc. (P) Bollmann .. B42*
Co-zymase; Participation of —— in the degradation of sugar. Myrbäck and Von Euler B761
of yeast. Von Euler and Myrbäck B724 B761
of yeast. Rôle of —— in fermentation. Von Euler and Myrbäck B958
Cream; Bacteriology, titratable acidity and hydrion concentration of ——. Murray and Weston B922
Churning ——. (P) North, and Milk Oil Corp. B1027
Extracting oil from ——. (P) North, and Milk Oil Corp. B350*
Factors which influence the curdling of —— in coffee. Burgwald B397
Production of reconstructed ——. (P) North, and Milk Oil Corp. B690
test bottles; Use of waste alcohol in calibration of Babcock ——. Theron and Cutler B884
Whipping reconstructed ——. (P) North, and Milk Oil Corp. B1027
Creamery waste; Purification of —— by the activated sludge process. Levine B231
Creatinine determinations; Error due to impure picric acid in ——. Newcomb B535
Cresol process for recovery of volatile solvents; Chemical basis of ——. Weissenberger B773
Cresols; Preparation of nitroso-*m*-cresol and its application to separation of *m*- and *p*- ——. (P) Ehrlich, and Verona Chemical Co. B860
Thermal reduction of ——. Fischer and others B287
Vapour densities of the ——. Bürk B823
Critical solution temperatures; Determination of ——. Cherchefsky B319
Crop variation; Studies in ——. Examination of yield of dressed grain from Hoos Field. Mackenzie B882
Crucible furnaces. *See under* Furnaces.
Crucibles for heat treatment of metals. (P) Bellis and others .. B562
for heat treatment of metals in a salt bath. (P) Collins, and Bellis Heat Treating Co. B302*
and the like. (P) Loke B295
Manufacture of thoria ——. (P) Richardson and others .. B1013
for melting metals; Means for plugging ——. (P) Begtrup, and Metal and Thermit Corp. B523*
Use of porcelain —— with porous bottoms in analysis. Hüttig and Schmitz B694
Crude oil. *See under* Oils, Hydrocarbon.
Crushers. (P) Coward B815
Crushing machines. (P) Jeffrey Manuf. Co. B544*
mills:
(P) Allen and Co., and Coles B583
(P) Ellis B322
(P) Ellis and Ellis B322
(P) Rheinische Maschinenfabr. B896*
(P) Seaman, and Brinjes and Goodwin, Ltd. .. B238
mills; Ball ——. (P) Ellis B622*
mills or the like for refining crude vegetable oils. (P) Fahlm B916
minerals or other materials; Machines for ——. (P) Stockman B896*
Cryolite; Manufacture of artificial ——. (P) Howard, and Grasselli Chemical Co. B56, B980
Crystal structure of metals, mixed crystals, and intermetallic compounds. Becker B100
structure of surface layer of worked metals. Thomassen .. B100
Crystalline mineral materials; Treatment of —— to improve their bonding properties. (P) Hartmann, and Carborundum Co. B295*
Crystallisation; Apparatus for separating dissolved substances by ——. (P) Marsh and Cochran B42*
of calcium chloride solutions and the like. (P) Maschinenbau-A.-G. Balcke B1013
and drying; Continuous process for rapid ——. (P) Welter B1000
of liquids (P) Field B160
processes:
(P) Appareils et Evaporateurs Kestner B736
(P) Siderlin and others B369
of sugar and other solutions. (P) Hinze, and Sudenburger Maschinenfabr. u. Eisengiesserei A.-G. B395

Crystallose; Sweeting foodstuffs with ——. Neumann B571
Crystals; Apparatus for obtaining well-formed —— from solutions. (P) Grüntzdörffer B698
Production of large —— from solutions. (P) A./S. de Norske Saltverker B205
Production of large —— from impure solutions of salts of heavy metals containing suspended matter. (P) Metallytwerke A.-G. für Metallveredelung B422
Treating solutions to separate solid constituents in form of coarse ——. (P) Isaachsen, and A./S. De Norske Saltverker B83*
Cuapinole resin. Gardner and Holdt B140
Cumidine salts of 2.7- and 2.6-naphthalenedisulphonic acids. Forster and Keyworth 167T
ψ-Cumidine benzenemonosulphonate. Keyworth 342T
ψ-Cumidine salts of α- and β-naphthalenedisulphonic acids. Forster and Keyworth 167T
ψ-Cumidine salts of α- and β-naphthalenesulphonic acids. Forster and Keyworth 302T
Cupola furnaces. (P) Levoz B20
furnaces; Operation of ——. (P) Rochlitz B100
Cuprene; Fuel containing ——. (P) Lepsius B818
Cupric hydroxide; Instability of ——. Fowles B131
Cupric oxide; Action of nitrogen peroxide on ——. Partington B378
Determination of metallic copper, cuprous oxide, and —— in mixtures. Nishida and Hirabayashi B132
Electrolytic preparation of ——. (P) Köhler B379
See also Copper oxide.
Cupric sulphide; Conversion of —— into soluble copper compounds. (P) Glund and others B746
Cupro-nickel. Source and influence of impurities in 80 : 20 ——. Blazey B18
Cuprous chloride solutions; Preparation of ——. (P) Barth .. B747
Cuprous oxide; Action of potassium permanganate upon —— in presence of dilute sulphuric acid. Nishida and Hirabayashi B132
Determination of metallic copper, cupric oxide, and —— in mixtures. Nishida and Hirabayashi B132
Formation of films of —— having photoelectric properties. Plonchon and Demorn B718
Iodometric determination of —— in presence of cupric ions, and its application to determination of reducing sugars. Blanchetière B772
Cuprous sulphide; Behaviour of liquid ferrous sulphide, iron, copper, and ——. Tammann and Bohner B716
Curcumone; Constitution of ——. Rupe and Wiederkehr .. B889
Currant jelly; Composition of a sugary crystalline crust on a —— kept at low temperature. Muller and Peytral .. B439
Cutch; Differentiation of cube gambier and Indian ——. Biggs B758
Cyanamide; Determination of —— as xanthylurea. Fosse and others B731
Electrolysis of aqueous solutions of ——. Kameyama .. B867
Manufacture of fertilisers containing soluble organic nitrogen from ——. (P) Soc. d'Etudes Chim. pour l'Ind. .. B67
Cyanide; Fixation of nitrogen as ——. (P) Metzger, and Californian Cyanide Co. B94
Fixation of nitrogen as —— in the blast furnace. Franchot .. B376
Recovering —— from mill solutions. (P) Halvorsen, and Merrill Co. B428
solutions; Determination of dissolved oxygen in ——. Weinig and Bowen B947
Cyanides; Manufacture of ——:
(P) Joseph B1012
(P) Von Bichowsky and Harthan B830*
Manufacture of alkali ——:
(P) Jacobs, and Du Pont de Nemours and Co. B217*, B671
(P) Krämer and Reiffen B908
Manufacture of alkali —— and retorts therefor. (P) Metzger, and Californian Cyanide Co. B787
Manufacture of ammonia from products containing alkali cyanides and complex ——. (P) N. V. Stikstofbindingsind. "Nederland" B979
Manufacture of —— with by-product carbon from cellulose purification. (P) Jacobs, and Du Pont de Nemours and Co. B558*
Production of —— from calcium cyanamide. Dodonow .. B744
Synthetic method of producing ——. (P) Hara, and Mitsubishi Kogyo Kabushiki Kaisha B335*
Use of mercury electrode for determination of ——. Kolthoff and Verzyl B116
Cyanine dyes. *See under* Quinoline dyestuffs.
Cyanoacetic ester. *See* Ethyl cyanoacetate.
Cyanogen; Rapid determination of —— in complex iron cyanides. Bellucci and Ricca B556
Cyanogen compounds; Manufacture of ——. (P) Von Bichowsky B558
Cyclohexane derivatives; Phytochemical reduction of ——. Akamatsu B28
Cyclohexylarylamines; Preparation of ——. (P) A.-G. für Anilin-Fabr. B449
Cylinder oils. *See under* Oils, Hydrocarbon.
Cymene; Synthesis of Terephthal Green and Terephthal Brilliant Green from ——. Bogert and Nisson B1006
p-Cymene; Production of —— from monocyclic terpenes. (P) Austerwell and Penfaillit B768
Sulphonation of ——. Phillips B445
Cyperus esculentus; Constituents of fatty oil from tubers of ——. Baughman and Jamieson B139
tubers; Chemical examination of ——. Power and Chesnut .. B148

PAGE

Cysteine; Catalytic action of traces of iron on oxidation of ——. Harrison .. B963
Preparation of heavy-metal compounds of —— readily soluble in water. (P) Bayer und Co. .. B812
Cystine; Preparation of heavy-metal compounds of —— readily soluble in water. (P) Bayer und Co. .. B812
Substitution of taurine for —— in the diet of mice. Mitchell B611
Czechoslovakia; Petroleum from ——. Chorkavlev and Prunet B363

D

Dairy products; Routine examination of ——, with special reference to the Mojonnier tester. Lampitt and others .. B884
wastes; *Flavobacterium suaveolens*, a new species of aromatic bacillus isolated from ——. Soppeland .. B960
wastes; Treatment and disposal of ——. Walker and others B923
Dammar gum; Esterification of ——. Brendel .. B796
penak resin; Malayan ——. Cubitt .. B916
Darwinia fascicularis; Essential oil of ——. Penfold .. B33
Darwinia grandiflora; Essential oil of ——. Penfold .. B926
Stearoptene occurring in essential oil of ——. Penfold and Morrison .. B576
Datura species; Mydriatic alkaloids from ——. Osada .. B887
Daylight filters; Method of producing ——. (P) Weisz .. B665
De-aerating liquids; Heating and ——. (P) Morison .. B534
Dealcoholising liquids. (P) Heuser .. B762
Death-watch beetle in timber roofs; Treatment of ——. Maxwell-Lefroy .. B335
Decacyclene; Manufacture of dyestuffs from ——. (P) Dziewonski .. B592*
Decahydronaphthalene; Chlorination of ——. Borsche and Lange .. B113
prepared with the aid of platinum black. Willstätter and Seitz .. B462
Stereoisomeric forms of ——. Eisenlohr and Polenske .. B936
Decahydronaphthalenes in low-temperature tar; Application of Zelinsky's method of catalytic dehydrogenation to detection of ——. Kaffer. .. B900
Decalin. *See* Decahydronaphthalene.
Decoic acid; Separation of octoic acid and —— from coconut oil Walker .. B139
Decolorising agents; Treatment of spent ——. (P) Chappell and others .. B460
carbon and like adsorbents; Apparatus for revivifying finely divided ——. (P) N. V. Algem. Norit Maatschappij .. B123
carbon; Manufacture of ——:
(P) Algem. Norit Maatschappij .. B364
(P) Backhaus, and U.S. Industrial Alcohol Co. .. B933
(P) Demme, and Darco Corp. .. B164
(P) Sauer .. B821
carbon; Manufacture of —— from peat. (P) Leadbeater .. B900*
carbon; Manufacture and refining of sugar with production of ——. (P) Elliott .. B109
carbon; Re-activating ——. (P) Sauer, and Algem. Norit Maatschappij .. B608
carbon; Use of —— in the form of plates for refining raw sugar Wohryzek .. B107
carbon; Utilisation of vegetable materials and manufacture of ——. (P) Barnebey .. B860
carbons; Determination of oil-saturation value of ——. Bailey and Allen .. B139
carbons; Testing ——. Teeple and Mahler .. B546
carbons; Methods for testing of —— and their comparison with "Norit." Sauer .. B226
charcoal; Automatic filtering apparatus for testing ——. Horne and Rice .. B67
charcoal; Manufacture of —— from rotted coal. (P) Rodman and others .. B84
charcoal used for clarification of tinted white wines; Analysis and control of pasty ——. Rocques .. B396
earths; Manufacture of ——. (P) Eberlein .. B480
material; Manufacture of ——. (P) Wilson, and Californian Fruit Growers' Exchange .. B703
medium for oils, fats, and other liquids. (P) Eberlein, and Chemical Foundation, Inc. .. B755
and purifying liquids. (P) Sauer, and N. V. Algem. Norit Maatschappij .. B321
and similar purposes; Treating materials for ——. (P) Manning, and Manning Refining Equipment Corp. .. B42
Decomposing difficultly soluble substances. (P) Rankin and Sloss B11
Deer; Fat from spotted ——. Rae .. B264
Dégras; Analysis of ——. Last .. B918
Dehydrating air containing volatile substances. (P) Delpech B855
apparatus. (P) Todt .. B322
fruit and the like; Apparatus for ——. (P) Elspass and Maloney .. B690
liquids. (P) Benjamin .. B1027
organic liquids. (P) Hammond, and U.S. Industrial Alcohol Co. .. B356*

Diamond; Application of micro-analysis to combustion of ——. Nicloux and Guillemet B419
Transformation of ——. Friedel and Ribaud B466
Diamonds; Black ——. *See* Carbonado.
Dianisidine benzenemonosulphonate. Keyworth 342T
Dianisidine salts of 2.7- and 2.6-naphthalenedisulphonic acids. Forster and Keyworth 167T, 168T
salts of α- and β-naphthalenesulphonic acids. Forster and Keyworth 301T
Diarsonodiphenyl and derivatives. Bauer and Adams B847
Diarylantimony compounds; Preparation of ——. (P) Chem. Fabr. von Heyden B809, B810
Diarylglycols; Hypnotic properties of symmetrical ——. Tiffeneau and Torres B197
Diarylthioureas; Preparation of ——. (P) Akt.-Ges. für Anilin-Fabr. B769
Diaspore clay. *See under* Clay.
Diastase; Effect of light on ——:
Pincussen B307
Pincussen and Di Renzo B307
malt-; Non-homogeneity and other properties of ——. Fricke and Kaja B272
malt-; Purification of —— by electrodialysis and electro-osmosis:
Fricke B531
Fricke and Kaja B272
Taka- ——. *See* Takadiastase.
Diastases; Differentiation of animal and plant ——. Kogu .. B28
Manufacture of —— by means of oxidising ferments. (P) Boidin and Effront B959
The two enzyme theory. Hizume B609
Diastatic activity of malt; Influence of temperature on optimum hydrogen-ion concentration for ——. Olsen and Fine .. B992
material; Manufacture of ——. (P) Gore B193
power of malt; Influence of soluble starches of different origin on determination of ——. Lampe B145
power; Polarimetric determination of ——. Gore B648
Diatomaceous earth; Manufacture of insulating bricks from ——. Smith B219
earth product. (P) Calvert and others B831
earth; Production of impermeable, strong, acid-proof tubes, bricks, etc. from ——. (P) Ahlmann-Ohlsen B713
earth. *See also* Kieselguhr.
Dibenzanthrone. *See under* Anthracene dyestuffs.
Dibenzyl; Oxidising —— to benzaldehyde and benzoic acid. (P) Carme, and Carbide and Carbon Chemicals Corp. B770*
βγ-Dibromobutane; Action of ammonia on ——. Morgan and Hickinbottom 309T
Dichloroacetyl chloride; Preparation of ——. (P) Deutsch. and Consortium für elektrochem. Ind. B811
1.2.4-Dichloroaniline 2.6-naphthalenedisulphonate. Forster and Keyworth 168T
1.2.4-Dichloroaniline salts of α- and β-naphthalenesulphonic acids. Forster and Keyworth 301T
p-Dichlorobenzene; Nitration of ——. Page and Heasman .. B201
Dichlorobenzidine salts of 2.7- and 2.6-naphthalenedisulphonic acids. Forster and Keyworth 168T
Dichlorobutane; Properties of ——. Briner and others .. B399
Dichloroethylene; Spontaneous combustion in work with ——. Thron B400
Dichlorofluorane; Manufacture of ——. (P) British Dyestuffs Corp., and Hodgson B10
Dickhart's reaction for certain raw fatty oils. Heller B877
Dichloro-1-ketotetrahydronaphthalene; Preparation of ——. (P) Tetralin Ges., and Riebensahm B355
Dicyanines. *See under* Quinoline dyestuffs.
Dicyanodiamide; Action of —— on plant growth. McGuinn .. B760
Dielectric separation: a new method for treatment of ores. Hatfield B261
separation; Small-scale testing of ores by ——. Holman and Shepherd B261
Diet in relation to rearing of young. Anderegg B571
Diethyl ketone; Determination of methyl propyl ketone and —— in mixtures. Pringsheim and Gorgas B925
Diethyl phthalate; Confirmatory test for presence of —— in denatured alcohol. Vuilleumier B1025
Detection of —— in alcohol and alcoholic preparations. Utz B687
Detection of —— in brandy. Wewers B687
Detection of —— in preparations made with denatured alcohol. Leffmann B959
Diethyl sulphate; Laboratory preparation of ——. Lynn and Shoemaker B536
Diethylalkylacetamide; Preparation of ——. (P) Meister, Lucius, und Brüning B353
Diethylchloroacetamide; Preparation of ——:
(P) Altwegg and others B732*
(P) Soc. Chim. Usines du Rhône (P) B492
Diffusion; An experiment in solid —— and its possible bearing on structure of solid solutions. Thompson and Dearden B427
of a gas mixture; Relation between —— and its pressure. Wussow B281
Digesters used in paper-making and like manufacture. (P) Stewart and Brown B707
Digesting and evaporating process; Combined ——. (P) Appareils et Evaporateurs Kestner B281

Digitalinum verum. Windaus and others B924
Digitalis extract; Obtaining a dry powder from ——. (P) Metallbank u. Metallurgische Ges. B356
extract; Production of a highly concentrated dry —— containing the total glucoside content of digitalis leaves. (P) Mannich B578
leaves; Suitability of aqueous extracts for valuation of ——. Joachimoglu B887
tincture; Influence of hydrogen-ion concentration on stability of ——. Joachimoglu and Bose B766
Dihydroanthracenedipyridinium dichloride; Preparation of ——. (P) Badische Anilin u. Soda Fabrik B414
Dihydrofarnesol; Synthesis of ——. Verley B615
Dihydrohydroxycodeinone; Preparation of ——. (P) Freund and Speyer B492
Dihydrositosterol; Preparation of ——. Anderson and Nabenhauer B846
Dihydroxyammonia and nitroxyl. Raschig B744
Dihydroxybenzenes; Electrochemical oxidation of alkyl ethers of ——. Fichter and Dietrich B277
Dihydroxybenzoylbenzene-p-sulphonic acid and some derivatives. Orndorff and Vose B823
γδ-Dihydroxycarbonyl derivatives; Properties of —— and their bearing on the polymerisation of polysaccharides. Hibbert and Timm B168
Dihydroxymethylanthraquinones; Preparation of ——. (P) Eder B849
Dihydroxyperylene; Manufacture of ——. (P) Pereira .. B34
o-Dihydroxyphenylethanolmethylamine hydrochloride; Preparation of racemic ——. (P) Soc. Chim. Usines du Rhône B809
Di-iminazolyl. *See* Glycosine.
Diketocamphane; Formation of —— by oxidation of camphor. Bredt B313
Diketofenchane; Formation of —— by oxidation of fenchone. Bredt B313
Dimethyl ether as anæsthetic. Brown B889
Dimethyl sulphate; Hydrolysis of ——. Lewis and others .. B806
Dimethylarylamines; Manufacture of ——. (P) Kalle und Co. B329
1.1′-Dimethyldinaphthyl-4.4-disulphide. Elbs and Christ .. B504
Dimethylglyoxime; Preparation of —— from by-product of acetone industry. Pouzio B277
6.8-Dimethyl-2-phenylquinoline-4-carboxylic acid and its ethyl ester; Preparation of ——. (P) Crossley, and Calco Chemical Co. B808
Dimethylxanthine; Production of organic acid salts of ——. (P) Knoll und Co., and Vieth B927
ββ′-Dinaphthyl ether; Preparation of ——. Rodionow and Manzow B87
Dinaphthylenethiophen; Manufacture of dyestuffs from ——. (P) Dziewonski B667
βγ-2.2′-Dinitrodi-p-tolylaminobutane; Action of acids on *meso*- and *dl*- ——. Morgan and Hickinbottom 308T
Dinitroethyleneglycol; Preparation of —— together with other nitro-compounds from ethylene oxide. (P) Chem. Fabr. Kalk, and Oehme B452
Dinitrophenol; Manufacture of ——. (P) Shannan and others B462
2.6-Dinitrophenol; Derivatives of ——. Fromm and Ebert .. B781
2.4-Dinitrosoresorcinol as reagent for ferrous salts. Goldstück .. B852
Dinitrotoluenes; Preparation of 2.3-, 2.5-, and 3.4- ——. Page and Heasman B201
Diosphenol. *See* Buchu camphor.
Dioxyarsenoanilines; Preparation of soluble derivatives of ——. (P) Oechslin, and Poulenc Frères B809
Diphenelns from resorcinol and substituted diphenic anhydrides. Adkins and others B823
Diphenyl derivatives; Structure of certain ——. Adkins and others B823
Diphenylamine; Colour tests for nitro-derivatives of ——. Davis and Ashdown B539
as indicator in titration of iron with bichromate. Knop .. B404
Diphenylcarbazide as a qualitative reagent for metals. Kolthoff B202
Diphenylguanidine; Manufacture of ——. (P) Adams and others B768
Preparation of —— and its pharmacological effect. Riesser B151
Use of —— as an accelerator of vulcanisation. Ames 117T, B434
Diphenylnaphthylmethane dyes. *See under* Triarylmethane dyestuffs.
Diphenylthiourea. *See* Thiocarbanilide.
Diprene, a new terpene from isoprene. Aschan B925
Dipterocarpus spirit, a substitute for oil of turpentine. Cuénot B796
Disaccharides; Constitution of ——. Gentiobiose; its identity with amygdalin-biose. Haworth and Wylam B190
Disazo dyestuffs. *See under* Azo dyestuffs.
Discharges. *See under* Printing.
Discharging granular and like material from retorts and similar vessels; Means for ——. (P) Hutchins B83*
Disincrustants; Preparation and feeding of —— for preventing and removing scale and similar hard deposits in steam boilers, condensers, hot wells, and the like. (P) Verderevsky and Saks B205
Disinfectant action and toxicity of the nitrophenols. Glaser and Wulwek B614
soaps; Manufacture of ——. (P) Riedel A.-G. B987

gas cells. (P) Adams B22
gas-generating systems. (P) Scott B101
precipitation; Effect of hydrophilic colloids on size and distribution of particles in ——. France and McBurney B391
process and cell. (P) Downs, and Roessler and Hasslacher Chemical Co. B753
processes; Smelting and ——. (P) Rodrian B176*
tanks, *e.g.*, for manufacture of hypochlorites. (P) Carrera .. B753
Electromechanical purification of gases; Apparatus for ——. (P) Nolze B405
Electrometallurgical plants; Controlling losses of electrical energy in ——. Eger B59
Electrometric titration and its application to metallurgical analyses. Shires B220
Electron discharge devices; Cathode for thermionic ——. (P) Harris, and Western Electric Co. B550
Electro-osmotic purification of saccharine juices. (P) Elektro-Osmose A.-G. B921
separation of salts from water. (P) Elektro-Osmose A.-G. B804, B845
Electroplating. (P) Foerster B262*
baths; Detection of hydrogen cyanide in air above ——. Koelsch and Seiffert B387
porous bases. (P) Pollak B985
process:
(P) Summers B60
(P) Taylor and Zehnicker B21
Electrostatic separation of particles. (P) South Metropolitan Gas Co., and others B735
Elemi resin; Elemic acid from Manila ——. Lieb and Schwarzl B952
Elemic acid from Manila elemi resin. Lieb and Schwarzl B952
Embossing cloth of animal fibre. (P) Funaesaka B129
Emetics; Contributions to study of ——. Costeanu B312
Emetine; Preparation of a solution of yatren and ——. (P) Behringwerke A.-G. B355
Emodin, Frangula-; Synthesis of ——. Eder and Widmer .. B113
Synthesis of ——. Jacobson and Adams B574
Emulsification of liquids; Centrifugal apparatus for ——. (P) Bendixen B737*
of liquids and semi-liquids; Film mills for perfect —— by means of dispersors. (P) Harrison Carter, Ltd., and others B497
Theory of ——. Finkle and others B140
Emulsifiers; Centrifugal ——. (P) Paul, jun., and others .. B3
Emulsifying apparatus. (P) Sonsthagen and others B405
and like machines. (P) Seaman, and Bruijes and Goodwin, Ltd. B3
materials; Machine for ——:
(P) Povey B205, B407*
(P) Povey and Hallas B407*
Emulsin; Hydrolysis of starch by ——. Kuhn B609
Emulsions; Centrifugal machine for production of ——. (P) Westenholz and Nyrop B230
Centrifuging petroleum refinery ——. Ayres, jun. B7
Dehydrator for oil ——. (P) Meredith, and Petroleum Rectifying Co. B210
Manufacture of ——:
(P) Davey, and General Electric Co. B63
(P) Travis and Glaban B124
of oils and fats; Preparation of aqueous alkaline ——. (P) Neumann B616
of pitch and other unsaponifiable matters; Obtaining stable aqueous ——. (P) Thornley and others B780
Prevention of formation of ——. (P) Sharples Specialty Co. B589
Resolving ——:
(P) Hapgood, and De Laval Separator Co. B47
(P) Zoul B779
and similar disperse systems; Continuous production of ——. (P) Agthe B239
Speed of sedimentation of ——. Sakurei B763, B1020
of substances insoluble in water; Preparation of aqueous ——. (P) Merck and Eichholz B35
Surface tension of oil-in-water and water-in-oil ——. Joshi B839
of tar or the like; Manufacture of ——. (P) Low B900
Treatment of ——. (P) Broadbridge and others B816*

Emulsive agents. (P) Billinghame B987
Enamel compositions. (P) Cooper, and Kemet Laboratories Co. B1014
kilns, ovens, and the like; Heat-insulating cover for doors of ——. (P) Unwin B17*
-lined apparatus; Heat transference in ——. Poste .. B541
slip; Bacterial growth in ——. Wahlin B382
Enamelled writing tablets; Manufacture of ——. (P) Zulauf .. B675
Enamelling furnaces. (P) Baud'Huin B239
furnaces; Operation of ——. (P) Clark B1014
metals, wires, and metal structures. (P) De Raphélis-Soissan B598*
process. (P) Schröder B789
Enamels; Comparative crazing and chipping of wet and dry process cast-iron ——. Robson B675
Effect of furnace atmosphere on firing of ——. Cooke .. B514
Effect of zirconia in —— for sheet steel. Wolfram B218
Flow-meter for ——. Gardner and Holdt B140
Fluorine in ——. Musiol B382
Manufacture of ——:
(P) Gardner B391
(P) Ges. für Tuff- und Ton-Technik B830
(P) Plauson's Forschungsinstitut B634
Manufacture of readily fusible ——. (P) Patent Treuhand für Elektrische Glühlampen, and General Electric Co. B1013
Method of rendering —— opaque. (P) Chem. Werke Auerges. B382
Opacifying compositions containing zirconium for ——. (P) Cooper, and Kemet Laboratories Co., Inc. B830
Opaquing composition for ——. (P) Ferino and others .. B675
Production of non-chipping ——. (P) Mades B788
U.S. Government specification for water-resisting red ——. B185
Wet-process for —— cast iron. Danielson and Reinecker .. B381
Engines, internal-combustion; Atomising and gasifying heavy combustibles for ——. (P) Chilowsky B46
internal-combustion; Catalysis and ——. Sokal .. 283R, B932
internal-combustion; Combustion of fuels in ——. Ostwald B500
internal-combustion; Device for supplying —— with a catalysed mixture of water vapour and hydrocarbons with air. (P) Laurent B779
internal combustion; Fuels for ——. (P) Midgley, jun., and General Motors Research Corp. B165
Fuels for. *See also* Motor-fuels.
internal-combustion; Method of operating ——. (P) Fischer B366
internal-combustion; Production of carburetted air for use in ——. (P) Abad B164, B327*
internal-combustion; Relative effects of some nitrogen compounds upon detonation in ——. Boyd B857
internal-combustion; Removing carbon deposits from cylinders of ——. (P) Midgley and others B1005
internal-combustion; Suggested mechanism for anti-knock action in ——. Wendt and Grimm B856
internal-combustion; Use of light and ultra-light alloys for pistons of ——. De Fleury B678
Engler distillations; Effect of thermometric lag in ——. Ormandy and Craven B701
Ensilage of a green crop; Changes which occur during ——. Woodman and Amos B273
Enzyme action. Relationship between chemical structure of certain compounds and their effect upon activity of urease. Rockwood and Husa B191
Milk-coagulating —— of *Solanum elaeagnifolium* berries. Bodansky B960
solutions; Purification and concentration of —— for rapid analysis of sugars. Reynolds B271
Enzymes; Adsorption of ——. Kraut and Wenzel B307
Amyloclastic ——. Fabre and Pénau B27
Constitution and mode of action of biochemical catalysts or ——. Effects of electrolysis on enzymes of pancreatic juice and amylase of germinated barley. Maignon .. B227
Influence of colloids on ——:
Hagihara B69
Pincussen B68
Influence of formaldehyde on function of plant ——. Sabalitschka B842
and light:
Pincussen B307
Pincussen and Di Renzo B307
and light. Frease, Pincussen and Kato B69
Mechanism of action of amino promoters upon ——. Rockwood B724
Preparation of active digestive —— from proteins. (P) Ehrenberg B762
Production of —— for use in manufacture of bread. (P) Kolman and others B30
Purification of ——. Michaelis and Davidsohn B399
Purification of —— by electro-dialysis and electro-osmosis. Fricke and Kaja B272
of the roots of bryony (*Bryonia dioica*). Girardet B887
Significance of oxygen for formation of —— in germinating plant seeds. Oparin and Bach B920
of the skin. Yamasaki B762
Specificity of ——. Influence of stereoisomeric sugars, non-hydrolysable carbohydrates and glucosides on activity of yeast invertase. Kuhn B609
Enzymic equilibria. Von Euler and Josephson B724
therapeutic agents; Specific ——. (P) Jena B770
Ephedrine; Synthesis of ——. Fourneau and Kanao B614
Ergot preparations. (P) Stein and Wiechowski B769
Eserine; Nitroso and benzoyl derivatives of ——. Polonovski and Polonovski B766

Esparto cellulose; Constitution of ——. Irvine and Hirst .. B249
Recovery of soda from solutions used in treating ——. (P) Wallace .. B707
Ester condensation products; Preparation of ——. (P) Carter, and U.S. Industrial Alcohol Co. .. B77
gum. *See under* Resins.
Esterification in presence of silica gel. Milligan and others .. B847
Esters; Manufacture of ——:
(P) Burghart, and U.S. Industrial Alcohol Co. .. B578
(P) Karpen and Bros. .. B850*
Manufacture of alkyl ——. (P) Willkie, and U.S. Industrial Alcohol Co. .. B233
Manufacture of polyfatty acid ——. (P) Zollinger and Grün B343*
of substituted aminopropyl alcohols. (P) Bayer and Co. .. B115
Ether, alcohol, and water; Determination of water in mixtures of ——. Newman .. 285T, B965
alcohol, and water; Vapour pressure curves for systems containing ——. Louder and others .. B925
Apparatus for manufacture of ——. (P) Foster .. B115
Catalytic dehydration of —— by alumina. Pease and Yung B313
Detection of aldehydes in anæsthetic ——. Isnard .. B730
Determination of —— in air and in blood, and its distribution ratio between blood and air. Shaffer and Ronzoni .. B55
Determination of peroxide as a contaminant of ——. Rowe and Phelps .. B888
More common impurities of anæsthetic ——. Rowe .. B925
Preparation of ——. Desmaroux .. B313
Preparation of chemically pure, toxic-free, narcotising ——. (P) Nederlandsche Gist- en Spiritus-Fabr. .. B1030
Preparation of non-peroxidising ——. (P) Nederlandsche Gist- en Spiritus-Fabr. .. B1030
Preparation of —— by Williamson's method. Bishop 23T, B278
Errata 148T
Preservation of anæsthetic ——. Middleton .. B806
Process for rendering —— free from air. (P) Mallinckrodt, and Mallinckrodt Chemical Works .. B926
Purification of ——:
Castille and Henri .. B576
(P) Cotton, and Du Pont de Nemours and Co. .. B1030
Test for methyl compounds in ——. Dott .. B114
Ethers; Dehydrating ——. (P) Hammond, and U.S. Industrial Alcohol Co. .. B356*
of phenol and of dihydroxybenzenes; Electrochemical oxidation of alkyl ——. Fichter and Dietrich .. B277
Production of derivatives of basic hydroxyalkyl ——. (P) Bayer and Co. .. B987
Ethyl acetate; Preparation of ——. Roberts .. 295T, B965
Preparation of —— from acetaldehyde. (P) Consortium für Elektrochem. Ind. .. B449
Ethyl acetoacetate; Preparation of ——:
(P) Carter, and U.S. Industrial Alcohol Co. .. B77
Roberts .. 295T, B965
Ethyl chloride; Manufacture of ——:
(P) Meister, Lucius, and Brüning .. B654
(P) Willkie, and U.S. Industrial Alcohol Co. .. B233
Preparation of —— from ethylene and hydrogen chloride. Berl and Bitter .. B278
Some constants of ——. Deiss .. B152
Thermal properties of ——. Jenkin and Shorthose .. B205
Ethyl chloroacetate; Preparation of ——. Stephens .. 313T
Ethyl cyanoacetate; Preparation of ——. Stephens 313T, 327T, B1029
Ethylene; Acceleration of reaction between sulphuric acid and ——. Gluud and Schneider .. B278, B547
Catalytic activation of —— by an organonickelic compound. Job and Reich .. B768
Manufacture of ethylsulphuric acid from ——. (P) Comp. de Bethune .. B153
Preparation of pure ——. Moser and Lindinger .. B75
Production of —— from alcohol. Hisamura and Imaoka .. B232
Production of gas mixtures rich in ——. (P) Bayer and Co. B502
Reaction of —— with sulphuric acid. Neumann .. B207
Recovery of alcohol from —— in coke-oven gas:
Gluud and Schneider .. B547
Gluud and others .. B547
Silver as catalyst for absorption of —— by sulphuric acid. Lommel and Engelhardt .. B536
Thermal effect of hydrogenation of —— at the surface of finely divided nickel. Foresti .. B361
Use of —— in colouring citrus fruit. Chace and Denny .. B139
Ethylene oxide; Preparation of dinitroethyleneglycol and other nitro-compounds from ——. (P) Chem. Fabr. Kalk, and Oehme .. B152
Ethylene-chlorhydrin; Apparatus for making ——. (P) Kirst, and Dow Chemical Co. .. B353
Ethylene-formochlorhydrin; Preparation of ——. (P) Von Bichowsky .. B577
Ethyleneglycol; Properties and uses of ——. Fuller .. B653
Ethylenic compounds; Additive power of iodine with regard to ——. André .. B139
Ethylsulphuric acid; Manufacture of —— from ethylene. (P) Comp. de Bethune .. B153
Ethyltetryl. *See* 2.4.6-Trinitrophenylethylnitramine.
β-Eucaine group; Stereo-isomerism and local anæsthetic action in the ——. King .. B276
Resolution of ——. King .. B276
Eucalyptus citriodora; Essential oil of ——. Penfold .. B33
Eucalyptus Macarthuri; Essential oil of ——. Penfold .. B33
Eucalyptus oils. *See under* Oils, Essential.

Eugenol; Conversion of —— into isoeugenol. Gokhale and others B447
Determination of —— in clove oil. Bonnis .. B313
Evaporating apparatus:
(P) Castets .. B1000
(P) Doern .. B774
(P) Lillie .. B40
(P) Merz .. B205*
(P) Swan .. B118
apparatus for ammonia liquor. (P) Marquard and Littler .. B511
apparatus for concentrating acid liquids. (P) Apparells et Evaporateurs Kestner .. B359
apparatus; Vacuum ——. (P) Johns .. B498
below ebullition point. (P) La Bour, and Chemical Equipment Co. .. B544
and digesting process; Combined ——. (P) Apparells et Evaporateurs Kestner .. B281
Heat-exchangers for ——. (P) Von Niederhäusern und Co. B42
liquid substances. (P) Brindle, and Corn Products Refining Co. .. B498
liquids:
(P) Eichelbaum .. B622
(P) Krause, and American Lurgi Corp. .. B737*
(P) Testrup, and Techno-Chemical Laboratories .. B737*
liquids by means of compressed vapours. (P) Schwarzenauer B2
liquids; Preventing entrainment in ——. (P) O'Boyle and others .. B118
liquids under vacuum. (P) Metallbank u. Metallurgische Ges. B774
pan unit; Vacuum ——. (P) Bancel, and Ingersoll-Rand Co. B622
pans:
(P) Stevens and Gilbert .. B1000
(P) Strontian- und Potasche-Fabr. Rosslau, Zweigniederlassung Dessauer Zucker-Raffinerie .. B816
solutions; Apparatus for ——. (P) Ter Hall .. B698
solutions or suspensions. (P) Nathyan .. B929
the volatile constituents of solutions, emulsions, and suspensions. (P) Wreesmann .. B774
water from liquid or semi-liquid substances. (P) Trocknungs-Anlagen Ges. .. B2
Evaporation of aqueous liquids at low temperature; Vacuum ——. Von Szent-Györgyi .. B583
-preventing mantle. (P) Davis .. B210
rate of some solutions. Bagster .. 61T, B359
Evaporator cell. (P) Brown, and Griscom-Russell Co. .. B774
design; Studies in ——. Effect of surface conditions. Pridgeon and Badger .. B541
Evaporators:
(P) Christie, and Wheeler Condenser and Engineering Co. .. B657
(P) Dyson and others .. B82
(P) Flint .. B736
(P) Hartman .. B658
(P) Helm .. B395
(P) Kermer .. B2
(P) Kummler and Matter .. B855*
(P) Lebernuth .. B456
(P) Nelson, and United States Sugar Co. .. B281
(P) Saucer, and Wurster and Sanger .. B930
for boiler-feed water. (P) Fothergill .. B160*
Film ——. (P) Hughes, and Zaremba Co. .. B855
Heat-transference in steam-jacketed ——. Olin and others .. B735
Heat transmission in vacuum —— of inclined rapid circulation type. Van Marle .. B541
Heating —— with the exhaust from condensing engines. Nickle B815
Heating unit for ——. (P) A.-G. Kummler und Matter .. B456
Removal of scale from —— in a cane-sugar factory with use of ammonium fluoride. Van der Linden .. B107
Scale formation in ——. McCabe and Robinson .. B541
and similar apparatus; Apparatus for removing solid impurities and scum from ——. (P) McClelland .. B816*
Utilising vapours from —— in heat accumulators. (P) Schmidt'sche Heissdampf Ges. .. B238
Vertical ——. (P) Apparells et Evaporateurs Kestner .. B737
Excreta; Furnace for ashing —— in porcelain crucibles. Martin B539
Explosion of dusts in air; Lower limits of concentration for ——. Trostel and Frevert .. B240
limits and ignition temperatures of combustible liquids. Strache .. B364
in a nitrogen-fixation installation at Bodio. Berl .. B416
pressures; Influence of cooling effect of walls of container on measurement of ——. Muraour .. B315
in a spray dryer for milk; Dust ——. Noel .. B841
temperatures of endothermic substances. Datta and others .. B201
waves; Propagation of ——. Vautier .. B771
Explosions in anthracite stoves; Report on ——. Illingworth and others .. B498
of centrifugally treated liquid; Preventing ——. (P) Aktiebolaget Separator .. B929
in liquid air machines; Causes of ——. Butescu .. B293
in nitrogen-fixation plants; Causes of ——:
Schaarschmidt .. B53
Schaarschmidt and Smolla .. B252
Explosive mixtures; Preparation of ——. (P) Kaufmann .. B579
and priming compositions. (P) Von Herz .. B403
reaction; Mechanism of the ——. Audibert .. B494
Explosives:
(P) Klinger, and Hercules Powder Co. .. B892
(P) Kuntz .. B928
(P) Swift .. B656
(P) Symmes, and Hercules Powder Co. .. B235
Acid economy in the manufacture of ——. Bliesling .. B733
Ammonium nitrate ——. (P) Hill, and Atlas Powder Co. .. B452
containing a liquefied gas. (P) Haynes, and Linde Air Products Co. .. B1030

Explosives—*continued.*	
containing resinates. (P) Snelling, and Trojan Powder Co. ..	B78
containing trinitrotoluene, hexanitrodiphenylamine, and wax; Preparation of pure nitro-compounds from ——. (P) Gärtner	B316
Continuous process for rapid crystallisation and drying of ——. (P) Welter	B1000
Detonating ——. (P) Staudinger	B733
Effect of variations in ratio of volume of gases from —— to volume of air into which they are projected. Cray and Garner	B280
Electrical method of determining velocity of detonation of ——. Wagstaff	B356
High ——. (P) Swint, and Du Pont de Nemours and Co. ..	B316*
High —— from nitrated olefines. (P) Woodbury, and Du Pont de Nemours and Co.	B495
Manufacture of ——:	
(P) Escales	B850
(P) Harlé	B495
(P) Sturgis, and General Explosives Co.	B155
(P) Wohl	B357
Manufacture of ammonium nitrate —— capable of being cast. (P) Chem. Fabr. von Heyden	B155
Manufacture of blasting ——. (P) Staudinger	B892
Manufacture of lead azide ——. (P) Davey, Bickford, Smith et Cie.	B771
Manufacture of liquid-air ——. (P) Sprengluft-Ges.	B579
Manufacture of ——, which can be fired by means of fulminate, without the use of nitric acid. (P) Riedel A.-G.	B403
Measurement of pressures developed by combustion of propellent —— in closed vessels. Burlot	B315
Method of detonating ——. (P) Staudinger	B155
Nitrostarch ——. (P) Snelling, and Trojan Powder Co. ..	B78
for primers and detonators. (P) Rathsburg	B968*
proof against firedamp. (P) Jacob	B316
rich in carbon; Peculiarities in combustion of —— in closed vessels. Muraour	B315
for use in blasting caps. (P) Marshall, and Du Pont de Nemours and Co.	B155
See also Detonating, Detonators, Powders *and* Primers.	
Extraction apparatus; Counter-current ——. (P) Bollmann ..	B12*
Frame to make possible, in the same apparatus, solvent recovery by distillation after ——. (P) De Lacy	B699*
plant; Rotary ——. (P) Rudolph	B119
of soluble constituents of materials. (P) McMahon and McMahon	B160
of soluble matter from shredded or finely divided material. (P) Graham	B144
and solvent recovery; Apparatus for ——. De Lacy	B539
of a substance dissolved or dispersed in a liquid, by another non-miscible liquid; Apparatus for ——. Bruno	B455
Extractor for extraction of tanning materials for analysis. Sheard Laboratory ——. Patterson	B528 281T
Extracts of drugs; Process for rendering durable ——. (P) Tambach, and Chemical Foundation	B403*
Preparation of therapeutically active constituents of ——. (P) Boedecker	B234

F

Fabrics of animal fibres; Permanent embossment of ——. (P) Funasaka	B129
Apparatus for impregnating —— with a mercerising or other liquid. (P) Farrell	B291*
containing artificial silk; Production of pattern effects on —— by mercerisation. (P) Calico Printers' Assoc., Ltd., and Roberts	B593
Filling, or dyeing and filling, of textile ——. (P) Russell and Broomfield	B709
Impregnating —— with leather. (P) Scholz	B464*
Impregnating —— with solutions of wood tar. (P) Schwarz ..	B592
Impregnating textile —— with rubber. (P) Runge-Werke A.-G.	B200
Manufacture of rubberised ——. (P) Meade	B187
Mercerising and finishing textile ——. (P) Fourneaux	B252*
Method of converting or finishing ——. (P) Tate	B978
Production of mouldable ——. (P) Bacon and others	B977
Protecting —— against rot. (P) Wolcott and Jennison ..	B90
Treating —— with rubber compositions. (P) Stevens and Dyer	B527
Treatment of ——. (P) Van Heusen	B742
Treatment of textile —— to remove dressings. (P) Boidin and Effront	B904
Washing and cleaning ——. (P) Hohenloher Seifenfabriken A.-G.	B827
F-Acid. *See* 2,7-Naphthylaminesulphonic acid.	
Farinaceous substances; Preserving ——. (P) Schoen	B489
Farnesol; Constitution of ——. Verley	B615
Fast Steam Green ——. *See under* Nitroso dyestuffs.	
Fat in bakery products; Determination of ——. Grossfeld ..	B993
in cacao products; Determination of ——. Feidstein ..	B885
of camel hump; Acids of ——. McClelland	164T
and carbohydrate metabolism in yeast. Maclean and Hoffert	B192
Counter-current extraction of —— from cacao products. (P) Wilson, and Cocoa Products Co. of America	B565
in eggs; Determination of ——. Grossfeld	B993
in feeding-stuffs etc.; Determination of —— with trichloroethylene as solvent. Sutthoff and Veltmann	B489
-splitting sulphonic acids; Manufacture of ——. (P) Divine	B681
Synthetic —— containing a methylglucoside residue. Irvine and Gilchrist	B263
	PAGE
Fats; Acetyl value of ——. Raymond and Clot	B795
Action of halogens on unsaturated ——. Cerdeiras	B838
Addition of bromine to ——. Oestermann	B719
Addition of bromine to —— and determination of the bromine value. Sabalitschka and Dietrich	B755
Alcoholysis and composition of ——. Elsdon	B877
Apparatus for extracting ——. (P) Nield B565,	B719*
Behaviour of aqueous iodine solutions towards ——. Margosches and Hinner	B564
Bleaching ——. (P) Langenkamp and Merck	B526
Bleaching of —— as a colloid-chemical problem. Twisselmann	B754
Bromometric determination of iodine value of ——. Manchot and Oberhauser	B564
Cellulose acetate membranes for ultra-filtration or dialysis of —— in organic solvents. (P) Duclaux	B972
Chemistry of the ——. Armstrong and Allan	207T
Comparative investigations on determination of iodine values of ——. Schmidt-Nielsen and Owe	B302
Compounds developed in rancid —— and mechanism of their formation. Powick	B302
Decolorising medium for ——. (P) Eberlein, and Chemical Foundation, Inc.	B755
Deodorising ——. (P) Bollmann	B839
Determination of acetyl value of ——. Biazzo	B479
Determination of hydroxyl value of —— by Normann's method. Meigen and Ramge	B184
Development of rancidity in ——. Tschirch and Barben ..	B719
Extraction of ——:	
(P) Eddy, and Cocoa Products Co. of America ..	B432
(P) Lemale	B877
(P) Tunison, and U.S. Industrial Alcohol Co. ..	B839
Extraction of —— with volatile solvents. (P) Rosenthal ..	B23
Factors concerned in autoxidation of ——. Greenbank and Holm	B639
Gravimetric determination of the bromine value and the bromine refraction value of ——. Biazzo	B478
Hydrogenation of ——:	
(P) Ellis	B102
(P) Lever Bros., and Thomas	B140
Iodine-bromine value of ——. Winkler	B755
Manufacture of nutritious ——. (P) Grün, and Schicht A.-G.	B795*
Mechanism of reaction of alcoholic iodine solution with ——. Margosches and others	B877
Plant for continuous extraction of —— from stone fruit. (P) Soc. Anon. Oiler	B952
Preventing loss of neutral fat due to formation of emulsions in refining ——. Schmid	B23
Purification of ——. (P) Bollmann	B603
Quantitative aspects of Kreis test for rancidity of ——. Holm and Greenbank	B564
Reactivity of iodine towards ——. Behaviour of iodine-iodic acid solutions. Margosches and Hinner	B719
Reactivity of iodine towards ——. Production of acidity in the reaction and mechanism of its formation. Margosches and Hinner	B341
Refining ——. (P) Croner	B390
Removing solid impurities from extracted ——. Hassel ..	B263
Separation of fatty acids from ——. (P) Wecker	B877
Separation of pigments of —— from the accompanying fat. Currie	B431
Substitutes for viscous ——. (P) Dubois und Kaufmann ..	B286
Treatment of ——. (P) Nicol, and Douglas and Sons, Ltd.	B302*
Uncommon animal ——. Rae	B264
Vulcanising ——. (P) Van der Meulen	B917
Fatty substances of animal origin; Sulphonation of ——. (P) Guilleminot	B140
Feather pigments. Bancroft	B1007
Feathers; Products of catalytic hydrolysis of geese ——. Abderhalden	B1020
Feeding fluids; Method and means for ——. (P) Wayne Tank and Pump Co.	B311
Feeding-cakes; Manufacture of cattle —— and oil. (P) Ingardin	B390
Feeding-stuffs; Determination of calcium, magnesium, potassium, and phosphoric acid in ——. Gilmour	B651
Determination of crude fibre in ——. Hanson	B651
Determination of fat in —— with trichloroethylene as solvent. Sutthoff and Veltmann	B489
Manufacture of —— from coarse farm products. (P) Laughlin	B149
See also Cattle-food *and* Fodder.	
Fehling's solution; Regeneration of ——. Pick	B853
Felis pardus, Fat from ——. Rae	B264
Felsinozima. *See Bacillus felsineus.*	
Felspar; Extraction of potash from orthoclase ——. Whyte ..	B253
Liberation of potassium from —— in soils by fertiliser and acid treatments. Vandecaveye	B345
and the like; Treatment of ——. (P) Rody, and Metallurgical Co. of America	B632
substitute for ceramic bodies; Manufacture of ——. (P) Ges. für Tnff- und Ton-Technik	B830
Fenchone; Formation of diketofenchane (ketofenchone) by oxidation of ——. Bredt	B313
Ferment; Position of optimum temperature of action of a —— Brownlee	B348
Fermentation, acetone-butyl alcohol-; Formation of *l*-leucic acid in ——. Schmidt and others	B843
Action of drugs containing hydroxymethylanthraquinones on ——. Orient	B307
alcoholic; Cannizzaro's reaction in mechanism of ——. Schweizer and Gellinger	B992
alcoholic; Dependence of —— on the acidity. Myrbäck ..	B959
alcoholic; Exchanges between yeast cells and the medium during and after ——. Triandfil	B725

Fermentation—*continued.*
Alcoholic —— of formaldehyde by osmium. Müller B232
alcoholic; Formation of *l*-malic acid in —— by yeast. Dakin B843
alcoholic; Mechanism of ——. Lebedev B348
Alcoholic —— by yeast cells under various conditions; Influence of adsorbents on course of fermentation of different carbohydrates. Abderhalden B146
Alcoholic —— by yeast cells under various conditions; Influence on the course of fermentation and on the multiplication of yeast cells of products obtained from yeast and certain other substances. Abderhalden B146
Citric acid ——. Butkewitsch B69
co-enzyme (co-zymase) of yeast. Myrbäck and Von Euler .. B761
co-enzyme of yeast; Rôle of ——. Von Euler and Myrbäck B958
of dextrose; Rôle of bacteria in lactic acid —— by peptone:
Acklin B28, B69
Baur B28
of dough. Chabot B70
of galactose by *Saccharomyces cerevisiae*. Söhngen and Coolhaas B992
Influence of various nitrogenous substances on ——. Petit and Raux B438
lactic; Irregularities in ——. Richet and Cardot B992
lactic; Irregularities in —— in presence of certain antiseptics. Lumière B193
lactic; Regularity of ——. Lumière B992
lactic; Study of ——, and properties of bacteria. Lumière B227
lactic; Variability of ——. Lumière B532
of molasses; Cause of low yield of alcohol in ——. Gupta and others 291T, B959
of molasses; Production of butyl alcohol and acetone by ——. (P) Robinson, and Atlas Powder Co. B1025
with non-enzymes. Biedermann B272
of organic residues; Destructive ——. (P) Boggiano-Pico .. B691
of pentoses by *Bac. granulobacter pectinovorum*. Peterson and others B883
process:
(P) Römer B922*
(P) Römer, and Deutsch-Koloniale Gerb- u. Farbstoff-Ges. B922*
process for production of propionates and propionic acid. (P) Sherman and Shaw B29
Propionic acid ——. Virtanen B687
Purification of carbon dioxide produced in ——. (P) Backhaus, and U. S. Industrial Alcohol Co. B943
Rôle of reaction of medium in selective ——. Fernbach and Schiller B687
of salts of organic acids as an aid to differentiation of bacterial types. Brown and others B1025
of solutions containing xylose, arabinose, and other pentose sugars with the production of acetic acid and lactic and other organic acids. (P) Fred and Peterson B569
of sugars by the propionic organism. Whittier and others .. B569
of sulphite-cellulose waste lye by bacteria. Pringsheim .. B272
of sulphite-cellulose waste lyes; Kinetics of alcoholic ——. Noll B686
of vegetable matter to obtain alcohol, acetone, and other products. (P) Norbury and others B1025

Fermenting powers of bacteria; Latent ——. Grey B610

Ferric chloride; Adsorption of —— by hide powder. Kubelka and others B225
Replacement of iodine by —— in quantitative analysis. Kolthoff and Tomicek B968
Titration of —— with thiosulphate. Jellinek and Winogradoff B811

Ferric hydroxide; Behaviour of sols of manganese dioxide, humus, and —— towards carbonate, bicarbonate, and clay. Udluft B595

Ferric oxalate, and its application to separation of iron and calcium. Barlot B893

Ferric oxide; Causticising sodium carbonate by ——. Matsui and Yasuda B130
Manufacture of colloidal solutions of ——. (P) Brünig, and Aktieselskabet Hydropeat B95*
Production of ——:
(P) Saunders, and Chemical Specialities Co. B641
(P) Stapf and Bruahübner B421
sols; Constitution and stability of ——. Pauli and Rogan .. B907
sols; Slow coagulation of —— to reversible jellies. Schalek and Szegvari B132

Ferric salts; Interaction of sulphurous acid and —— and its catalysis. Pinnow B54

Ferric sulphate; Manufacture of solutions containing sulphuric acid and ——. (P) Leaver and others B133

Ferricyanides: Electrometric titration of —— with potassium iodide. Müller B710
Iodometric determination of ——. Lang B940
Use of antimony chloride for volumetric determination of ——. Feigl and Schummer B710

Ferro-alloys; Decarburising ——. (P) Sieard, and United States Ferro Alloys Corp. B338
Desulphurising ——. (P) Jackson and others B874
Determination of carbon in —— by combustion in a current of oxygen. Van Royen B425
Manufacture of —— and of weather-proof articles therefrom. (P) Skelley B340*

Ferroboron; Determination of boron in ——. Mazzetti and De Carli B472
Production of —— from boric acid. Parravano and Mazzetti B471

Ferrochrome alloy containing boron. (P) De Gelyer B678
low in carbon and silicon; Manufacture of ——. (P) Blome B792
Refining ——. (P) Saltrick and Stimson B222*

Ferrochromium anodes; Production of chromium from —— Thompson and others B907
Manufacture of ——:
(P) Berlin B717
(P) Müller, and Metal and Thermit Corp. B984

Ferrocyanides; Detection and determination of thiocyanates in presence of ——. Perciabosco B253
Determination of ——. Cumming B253
Iodometric determination of ——. Lang B940
Use of antimony chloride for volumetric determination of ——. Feigl and Schummer B710

Ferro-nickel-chromium alloy. (P) Girin, and Soc. Anon. de Commentry, Fourchambault, et Decazeville B430*

Ferrophosphorus; Manufacture of ——:
(P) Barr B1015
(P) Warner B60
Production of —— in the electric furnace. Swann B1015

Ferrosilicon; Determination of silicon in ——. Dubovitz .. B135

Ferrosoferric oxide; Production of ——. (P) Elbe B433

Ferrous alloys. *See under* Alloys.

Ferrous ammonium citrate; Preparation of ——. (P) Glaeser B1030

Ferrous ammonium sulphate; Determination of acidity of aqueous solutions of ——. Kitajima B214

Ferrous carbonate; An occurrence of native ——. Tacke .. B15

Ferrous oxide; Decomposition of ——. Chaudron and Forestier B671

Ferrous salts; 2.4-Dinitrosoresorcinol as reagent for ——. Goldstück B852

Ferrous selenide as catalyst for cracking oils. Midgley, jun., and Hochwalt B932

Ferrous sulphate; Oxidation of —— to ferric sulphate by means of air. Reedy and Machin B135

Ferrous sulphide; Action of steam on ——. Thompson and Tilling 38T
Behaviour of liquid cuprous sulphide, copper, iron, and ——. Tammann and Bohner B716
Colloidal —— prepared in presence of gelatin. Sabbatani .. B114
Pharmacological investigation of colloidal —— prepared in presence of gelatin. Sabbatani B232

Ferrovanadium; Determination of phosphorus in ——. Swoboda B715

Fertiliser; Application of ammonium bicarbonate as a ——. Gimd B395
meal; Treating organic materials to make oils and ——. (P) Hiller, and Hiller, Inc. B479
Phosphor-manganese slag as ——. Ongaro B484
preparations; Bacterial ——. Makrinoff B346
Sulphur as a supplementary ——. Kalushski B800
value of ammonium sulpho-nitrate. Graftiau and Hurdy .. B990

Fertilisers containing soluble organic nitrogen; Manufacture of —— from cyanamide. (P) Soc. d'Etudes Chim. pour l'Ind. B67
Determination of availability of ——. Lamia B484
Determination of available nitrogen in ——. Kellogg .. B436
Determination of available organic nitrogen in mixed ——. Hort B646
Determination of phosphoric acid in ——. Breckenridge .. B1022
Effect of —— on development of stem rust in wheat. Stakman and Aamodt B646
Effect of mineral —— on nodulation of soya beans. Perkins B760
Field experiments with atmospheric-nitrogen ——. Allison and others B646
Importance of a supply of artificial ——, especially phosphatic fertilisers, for Germany. Lemmermann B269
Influence of varying ratios of phosphoric acid and potash in —— on crop yield and nitrogen recovery. Blair and Prince B645
Loss of calcium carbonate in drainage water as affected by different chemical ——. Morse B483
Manufacture of ——:
(P) Badische Anilin- und Soda-Fabrik B437
(P) Breslauer and others B760*
(P) Brewer B144
(P) Carpzow and others B882
(P) Christensen B607
(P) Endlaugenkalk-Ges. B567
(P) Igawa, and Asahi Garasu Kabushiki Kaisha B760, B842
(P) Ishitani, and Asahi Garasu Kabushiki Kaisha B991
(P) Kranl und Wilkening Ges. B270
(P) Nikaido, and Michigan Chemical Co. .. B760, B801
(P) Snelling, and Trojan Powder Co. B647
(P) Soc. Chim. de la Grande Paroisse (Azote et Prod. Chim.) B530
(P) Stillesen B647
(P) Stollberg B270
Manufacture of ammonium compounds for use as ——. (P) West and Jacques B607, B882*
Manufacture of artificial ——. (P) Harnist B530
Manufacture of colouring matters and —— from sewage. (P) Bechelli B614
Manufacture of concentrated ——. (P) Ross and Hazen .. B141
Manufacture of disinfecting —— from sulphur or metal sulphides. (P) Harnist B647
Manufacture of dustless, non-corrosive ——. (P) Schrauth B347
Manufacture of mixed ——. (P) Allgem. Ges. für Chem. Ind. B801
Manufacture of mixed —— from distillers' wash or similar organic matter. (P) Coppée et Cie. B270
Manufacture of nitrogenous ——. (P) Richards and others B801
Manufacture of non-deliquescent mixed —— from calcium nitrate. (P) Quade B725
Manufacture of non-deliquescent potassium-nitrogen ——. (P) Meister, Lucius, und Brüning B956

PAGE

Fertilisers—*continued.*
Manufacture of non-hygroscopic ——. (P) Badische Anilin- und Soda-Fabrik .. B306*
Manufacture of phosphatic ——:
(P) Eisenwerk Ges. Maximilianshütte, and Lenchs B485
(P) Lemmermann .. B347
Manufacture of phosphatic —— by the volatilisation process. Waggaman .. B269
Manufacture of —— from spent tan, spent dye-woods, straw and like vegetable matter. (P) Marris, and Walker and Sons .. B346
Manufacture of stable phosphatic ——. (P) Badische Anilin und Soda Fabrik .. B485
Perchloric acid method for determining potassium in ——. Page .. B269
Relative value of nitrogenous —— for higher plants. Truffaut and Bezssonoff .. B305
Residual value of phosphatic ——. Graftian .. B990
Utilisation of hair and leather in manufacture of commercial ——. Skooglund .. B484
Utilisation of indigenous phosphates as —— in India. Hutchinson .. B269
Utilisation of nitrogen in —— as affected by lime. Lipman and Blair .. B436
Fever; Induced oxidation, and explanation of ——. Dhar .. B925
Fibre compositions; Manufacture of rubberised ——. (P) Yackee, and Goodyear Tire and Rubber Co. .. B343
crude-; Determination of —— in feeding-stuffs. Hanson .. B651
Fibres, animal; Dyeing —— with vat dyestuffs. (P) Morton Sundour Fabrics, Ltd., and Thomas .. B213
animal; Formation of dyes on —— by reaction of the material itself. Groot .. B905
animal; Mordanting —— with mineral substances. Klöd .. B939
animal; Obtaining new effects on ——. (P) Lanil A.-G. .. B629
animal-, Production of effect threads with ——. (P) Cassella und Co. .. B709*
animal; Protecting —— during treatment with alkaline solutions. (P) Act.-Ges. für Anilin-Fabr. .. B333
animal; Recovering —— from fabrics. (P) Ogden .. B905*
animal; Rendering —— moth-repellent ——. (P) Turner, and Pathé Chemical Co. .. B553
animal; Treatment of ——. (P) Bergmann and others .. B978
Apparatus for bleaching, dyeing, and analogous treatment of textile ——. (P) Brandwood and others .. B129
Arghan and pita ——. Bunting .. B741
artificial; Treatment of —— preparatory to combing and spinning. (P) Köln-Rottweil A.-G. .. B415
Autographic testing machine for ——. Shorter and Hall .. B88
Decomposition of wood or plant stems for production of textile ——. (P) Jochum .. B826
and dyestuffs; Adsorption compounds of ——. Haller .. B129
Extracting —— from textile plants. (P) Postiglione .. B374
Greasing agents for textile ——. (P) Spiess .. B128
Impregnating —— with rubber. (P) Runge-Werke A.-G. B290
Impregnating vegetable, animal, and mineral —— with leather. (P) Scholz .. B464*
Machines for drying textile —— in the hank or in the warp. (P) Plews and Turner .. B864*
Manufacture of —— for paper etc. (P) Drewsen, and West Virginia Pulp and Paper Co. .. B977
Manufacture of spinning ——. (P) Ubbelohde .. B50
Manufacture of textile —— from animal hair and bristles. (P) Schweitzer and Lang .. B129*
Microscopic structure of "tendered" ——. Searle .. B705
Microstructure of ——. Moncada .. B463
Obtaining —— from bagasse:
(P) Shaw .. B784
(P) Shaw and Dahlberg .. B784
Obtaining easily bleached cellulose ——. (P) Von Ehrenthal B905*
Production of —— from agaves and *Yuccaceæ*. (P) Chem. Fabr. Griesheim-Elektron .. B415
Producing fast tints on ——. (P) Soc. of Chem. Ind. in Basle B1010
Production of textile —— from animal hair and bristles. (P) Schweitzer .. B90
Production of textile —— from nettles, jute, reeds, etc. (P) Braun .. B414
Production of textile —— from plants, such as nettles, jute, reeds, typha, and the like. (P) Braun .. B939
Separating animal and vegetable ——. (P) Ogden .. B742
Treating —— with rubber. (P) Spijker .. B954
Treatment of textile —— to remove dressings. (P) Boidin and Effront .. B904
vegetable; Improving ——. (P) Meister, Lucius, und Brüning .. B977
vegetable; Improving —— by treatment with acids. (P) Rohmor and others .. B553
vegetable; Preservative composition for ——. (P) Snelling B414
vegetable; Production of dyeings on ——. (P) Badische Anilin und Soda Fabrik .. B906
vegetable; Treatment of —— with chlorine. (P) Waentig and Ziegenbalg .. B200
vegetable; Treatment of yarns and fabrics composed of —— previous to bleaching. (P) Mackenzie and others B905
Washing and degumming ——. (P) Pritchard .. B415*
X-ray spectroscopic examination of nature of swelling of ——. Katz .. B782
Fibrinogen; Determination of —— in blood. Starlinger .. B114
Fibroin; Silk ——. *See under* Silk.
Fibrous compositions; Manufacture of ——. (P) Schidrowitz, and Vultex, Ltd. .. B743*
materials; Apparatus for treating —— with liquids or gases. (P) Tomlinson and Thomas .. B669

Fibrous—*continued.*
materials; Beating, sizing, colouring, and filling disintegrated straw, peat, leather, wood, and other ——. (P) Plauson's Forschungsinst. .. B52
materials; Composition for cleaning or scouring ——. (P) Easton .. B742
materials; Effect of sodium hydroxide on composition, digestibility, and feeding value of ——. Archibald .. B011
materials; Impregnating —— with rubber. (P) Runge-Werke A.-G. .. B290
materials; Improving ——. (P) Heberlein und Co. .. B332
materials and the like; Machines for washing ——. (P) Charlesworth .. B170*
materials; Manufacture of ——. (P) Billwiller and Billwiller .. B90
materials; Manufacture of moulded or pressed goods from ——. (P) Kaye, and Kaye's Rubber Latex Process, Ltd. B250
materials; Rendering —— impervious to grease. (P) Wright B90
materials; Scouring, bleaching, dyeing, wet acid carbonising, and like treatment of ——. (P) Davies and Haigh .. B291
materials; Treating —— for building, insulation, and other purposes. (P) Pfarrius .. B59
materials; Treating —— with rubber. (P) Spijker .. B954
materials; Treatment of ——. (P) De Ros .. B213
plant materials; Treatment of —— previous to disintegration by means of acids or alkalis. (P) Schwalbe .. B742
Filaments for electric incandescence lamps and the like. (P) General Electric Co. .. B740
of vacuum tubes; Coating process particularly for ——. (P) Western Electric Co. .. B245*
See also Threads.
Filling material for columns, towers, etc. (P) Petzel and Weinmann B160*
material for gas and liquid contact apparatus. (P) Brégeat, and Brégeat Corp. of America .. B544*
Films; Manufacture of cellulose ——. (P) Soc. Anon. "La Cellophane" .. B12
Filter-candles; Cleaning Berkefeld ——. Kubelka .. B225
-cloth; Removal of calcium sulphate adhering to ——. (P) Ehrlich und Co. .. B282
-grits; Relative solubilities of quartz, lead smelter slag, chrome ore, and silicate —— in hot alkaline waters. Hall and others .. B691
-leaf. (P) Schuhmann .. B322
-mats; Permanent —— in Gooch crucibles. Sweeney and Quam .. B495
-paper. *See under* Paper.
-plates made of sintered glass; Use of —— in the chemical laboratory. Hüttig .. B235
-press cloth. (P) Hale, and Hooper and Sons Co. .. B735
-presses. (P) Reuton .. B158
-presses; Continuous ——. (P) Plauson's Forschungsinst. B322, B735
-presses; Device for operation in connexion with ——. (P) Burchenal .. B456
-presses and plates therefor. (P) Aldum, and Du Pont de Nemours and Co. .. B698
-presses for separating wax from chilled oil. (P) Glair and others .. B47
-rods; Gravimetric determinations with ——. Hänsler .. B892
-rods; Use of —— in quantitative microchemical separations. Benedetti-Pichler .. B892
-sand; Cleaning —— without removal. Carpen .. B727
Stream-line —— and its application to the o and colour industry. Pickard .. B603
"Filter-cel." *See* Kieselguhr.
Filtering apparatus:
(P) Dehne .. B621
(P) Filcher and Beldam .. B1000
(P) Fulcher .. B544*
(P) Keene .. B735, B815
(P) Thoens and Météric .. B118
apparatus; Automatic control of ——. (P) Jung .. B359
apparatus; Automatic —— for testing decolorising charcoals. Horne and Rice .. B67
apparatus; Screening or ——. (P) Brackett, and Brackett and Co. .. B662*
apparatus for use with saccharine solutions. (P) Vachier .. B145
liquids; Apparatus for use in ——. (P) Robson .. B497
material; Manufacture of —— by firing moulded mixtures of syenite, clay, and kieselguhr. (P) Kohn .. B17
materials; Revivifying ——. (P) McConnell .. B100
media; Revivifying carbonaceous ——. (P) Weinrich .. B802
medium. (P) Jones and Jones .. B621
and similar purposes; Treating materials for ——. (P) Manning, and Manning Refining Equipment Corp. .. B42
Filters:
(P) Dehne .. B3
(P) Feldmeier, and Burrell and Co. .. B584
(P) Lippert .. B282
(P) McCarty and others .. B1000
(P) Price, and Price Engine Corp. .. B322
(P) Rolls .. B42
(P) Sweetland, and United Filters Corp. .. B3, B1000
(P) Wright and Young .. B3
Air ——. (P) Möller Ges., and Ans der Mark .. B323*
for air and other gases. (P) Joseph .. B931*
Centrifugal ——. (P) Lilleshall Co., and Bishop .. B657, B972
Chemical changes occurring in sprinkling ——. Campbell and Rudolfs .. B600
Dry ——. (P) Harrison, and Drying Systems, Inc. .. B735
of large surface; Cleaning sand ——. (P) Sivade .. B652
Light ——. *See under* Light.

PAGE

Filters—*continued.*
membrane-; Chemical analysis with ——. Nature of the membrane and its applications in analytical chemistry. Jander and Jander .. B316
membrane-; Filtration of water with ——. Zsigmondy .. B803
Revivifying ——. (P) Russell .. B855*
Rotary ——;
(P) Brackett, and Brackett and Co. .. B4*
(P) Hertenbein .. B030
for separating suspended matter from fluids. (P) Hele-Shaw .. B230
Filtration accelerator; Production of a —— from kieselguhr. (P) Ritchie, and Celite Co. .. B774
process. (P) Thatcher, and Celite Co. .. B82
processes; Importance of capillary pheuomena in ——. Schultze .. B815
Studies on process of ——. Schaum and others .. B281
of suspended particles from gases; Special case of ——. Doslos B455
Finishing pastes; Hydrolysis of starch by hydrogen peroxide for preparation of ——. Sunder .. B1010
Fire-extinguishers of the foam type; Charges for ——. (P) Phillips B497
-extinguishing foam; Composition for producing a ——. (P) Pyrene Manuf. Co. .. B3
-extinguishing foams; Testing ——. Swift .. B621
-extinguishing mixtures. (P) Fohlen .. B497
-pots; Electric —— for heating metal baths etc. (P) Hadaway, jun. .. B680
Firebrick; Behaviour of —— in malleable-iron furnace bungs. Schurecht and Donda .. B174
Refractoriness of —— under load. Mellor .. B673
Influence of texture on transmission of heat through ——. Green .. B673
Fireclay; Influence of rapid cooling on reversible expansion of ——. Houldsworth .. B381
materials; Abrasion of ——. Hancock and King .. B175
Oxidation of —— during firing. Bole and Jackson .. B381
Fireproofing combustible materials. (P) Eichengrün .. B506
Fires; Extinguishing ——. (P) Eichengrün .. B506
Fischer-Schrader aluminium carbonisation apparatus; Manipulation of the —— and examination of the distillation products obtained with it. Noack .. B161
Fish; Drying ——. (P) Hampshire, Hobbs and Co., and Jones .. B72*
flesh; Manufacture of preparations resembling meat extract from ——. (P) Hildebrandt, and Chemical Foundation, Inc. .. B72
Manufacture of high-grade flour from ——. (P) Hiller and others .. B764
offal; Preparation of —— for cattle food and poultry foods. (P) Lewis .. B572
oils. *See under* Oils, Fatty.
-roe cheese. Stathopoulos .. B844
Flame; Influence of nitrogen dilution on speed of ——:
Campbell and Ellis .. B897
Ellis and Stubbs .. B897
Flames; Jet ——. Payman .. B974
Flasks for containing chemicals and means for opening and emptying them. (P) Horst .. B854
Flavanthrone. *See under* Anthracene dyestuffs.
Flavobacterium suaveolens, a new species of aromatic bacillus isolated from dairy wastes. Soppeland .. B960
Flavylium salts related to chrysin, apigenin, and luteolin. Pratt and others .. B247
Flax; Cottonising ——. Schlmausky and others .. B11
Development of acidity during retting of ——. Eyre and Nodder .. B552
Differences in dyeing properties of cotton, hemp, and ——. Bartunek .. B375, B593
fibres; Utilisation of cottonised —— for production of cuprammonium cellulose solutions. (P) Krais and Waentig .. B290
Function of water in wet spinning of ——. Gibson .. B592
and kindred fibres; Microscopic structure of "tendered" ——. Searle .. B705
lignin and some derivatives. Powell and Whittaker .. B289
Production of fine lustrous ——. (P) Krais .. B290
Retting ——. (P) Summers .. B628*
straw for paper-making. De Rue and others .. B976
Flavouring extract. (P) Gruenberg and others .. B732
substances; Analysis of ——. Durrans .. B731
Flesh; Alteration of constituents of preserved ——. Smorodinzew and Adowa .. B610
See also Meat
Flint clay. *See under* Clay.
Conversion of —— into amorphous quartz. Grün .. B712
Flints; Black and grey —— in earthenware bodies. Heath and Leese .. B176
Floors; Manufacture of slabs for ——. (P) Jansen .. B384
Flotation; Interfacial tension equilibria important in ——. Coghill and Anderson .. B261
of lead ore; Results obtained in large-scale ——. Mayer and Schön .. B19
oils; Process of making ——. (P) Rhodes, and Barrett Co. B1017
process:
(P) Ellis, and Ellis Flotation Co. .. B476
(P) Janney .. B523
process; Behaviour of alumina in the ——. Berl and Pfannmüller .. B836
process; Behaviour of oxides, carbonates, and sulphates in the ——. Berl and Pfannmüller .. B792
process. Enrichment of phosphates. Berl and Pfannmüller .. B836

PAGE

Flotation—*continued.*
process; Investigations of the ——. Behaviour of silica (quartz). Berl and Pfannmüller .. B678
process; Theory of the ——. Bartsch .. B984
processes; Heating liquids in ——. (P) Maschinenbau-Anstalt Humboldt .. B837
processes; Importance of capillary phenomena in ——. Schultze .. B815
Selective —— as applied to Canadian ores. Parsons .. B751
Separation of chemicals and minerals by oil ——, and removal of oil from chemicals. Traube and others .. B895
test apparatus; Froth ——. (P) Sulman and Picard .. B262
Flour; Ageing of wheat ——. Sharp .. B688
Amino-acid distribution in proteins of wheat ——. Cross and Swain .. B194
Changes in hydrogen-ion concentration and electrolytic resistance of water extracts of natural and chlorine-treated wheat —— in storage. Bailey and Johnson .. B688
Characterisation of rye and wheaten —— by investigation of their aqueous extracts. Strohecker .. B487
Chemical analysis as a means of determining degree of alteration in ——. Zak .. B487
composition; Bread-making ——. (P) Blouch and others .. B727
Conserving meal or —— and improving its baking qualities and colour. (P) N. V. Ind. Maatschappij voorh. Noury & Van der Lande .. B149
Detection of persulphate in —— and a recent bleaching agent for flour. Miller .. 230T, B688
Detection of rye flour in wheat ——. König and Bartschat .. B396
Determination of baking value of ——. Braun .. B762
Determination of moisture in ——:
Mitchell and Alfend .. B884
Snyder and Sullivan .. B688
Electric apparatus for production of nitrogen peroxide for bleaching ——. (P) Stacey .. B71
Lipoids in —— as a factor affecting gluten quality. Working B884
Manufacture of high-grade —— from fish and like materials. (P) Hiller and others .. B764
and milling products; Bleaching and improving ——. (P) Gelissen, and N. V. Ind. Maats. voorh. Noury & Van der Lande .. B480
Physico-chemical properties of strong and weak ——. Influence of ash of flour upon viscosity of flour-in-water suspensions. Gortner and Sharp .. B29
Physico-chemical properties of strong and weak ——. Physical state of the gluten as influencing the loaf volume. Sharp and others .. B148
Physico-chemical properties of strong and weak ——. Relationship between maximum viscosity obtainable by addition of lactic acid and concentration of flour-in-water suspensions. Sharp and Gortner .. B29
Preserving ——. (P) Schoen .. B489
Production of nitrogen trichloride for bleaching ——. (P) Baker, and Wallace and Tiernan Co. .. B962
stored in 100-kg. sacks and in bags and cartons containing 500 g.; Variations in weight of ——. Arpin and Pecaud B193
suspensions; Relation between viscosity of —— and loaf-volume. Mohs .. B110
Treatment of ——. (P) Clarke .. B71
Viscosity as a measure of hydration capacity of wheat —— and its relation to baking strength. Sharp and Gortner B762
Flow-meter for enamels, paints, and similar plastic materials. Gardner and Holdt .. B140
Flowers; Preservation of ——. (P) Stabback .. B489
Fluorescence phenomena; Application of —— to identification of medicaments. Bayle and Fabre .. B696
Fluorescent powers of cellulose and its derivatives; Quantitative determination of ——. Lewis .. B248
Fluorides; Separation of phosphates from ——. Müller and Wagner .. B54
Fluorine; Colour reaction for ——. De Boer .. B852
in the deoxidising slag and its influence on refractories in basic electric furnace steel practice. Sisco .. B045
Determination of —— in organic compounds. Picard and Buffat .. B204
in enamels. Muslol .. B382
in nickel-depositing solutions; Determination of ——. Hammond .. B873
Preparation of ——:
(P) Mathers .. B467
(P) Mathers and Humiston .. B467
Simons .. B942
Volumetric determination of ——. Scott .. B695
Fluorine compounds; Removal of —— from phosphoric acid. (P) Carothers and others .. B419
Fluorspar; Effect of addition of —— to raw cement mix. Kühl B295
as an ingredient of blast-furnace cement. Guttmann and Biehl .. B516
Manufacture of vessels of high chemical resistance from ——. (P) Gebr. Siemens und Co. .. B737
Fluosilicic acid. *See* Hydrofluosilicic acid.
Fluxes for soft soldering. Crow .. B474
Foam mantle for preventing evaporation. (P) Davis .. B210
-producing materials; Valuation of saponins as ——. Kofler B443
systems. Bartsch .. B971
for use on fires; Testing ——. Swift .. B621
Foaming of boiling water. Foulk .. B1027
Foams; Composition for ——. (P) Jennings, and Standard Development Co. .. B622

PAGE

Fodder preservation. Comparative values of green fodder, sweet silage, and hay. Crassmann B688
Production of a concentrated ——, having a high content of vitamins and enzymes, from yeast. (P) Bayer und Co. B651
Treatment of green ——. (P) Siemens-Schuckertwerke Ges. B994
See also Cattle-food *and* Feeding-stuffs.

Fog; Composition for preventing or dissipating —— over water. (P) Miller B160*

Food compositions; Concentrated ——:
(P) Matsuoka B690
(P) Nishio and Matsuoka B690
containers; Desiccating apparatus for ——. (P) Whiting .. B440
Drying and solidifying articles of ——. (P) Nishina.. .. B196
and other products; Dehydrating receptacles for ——. (P) Frenkel B004*
products. (P) Phillips, and American Cotton Oil Co. .. B1027
products; Apparatus for sterilising or other heat-processing ——. (P) Ingram B727*
products; Manufacture of ——:
(P) Kellogg Co. B690
(P) Luft B71
(P) Mininberg B230
products; Manufacture of —— from albuminous animal waste. (P) Hildebrandt, and Chemical Foundation, Inc. B72
products; Manufacture of —— from hydrogenated oils. (P) Boyce, and American Cotton Oil Co. B310
products; Preserving —— for canning. (P) Allen B534
products; Simultaneous production of demineralised amylaceous substances and lower nitrogenous —— from tubers of cereals. (P) Boidin and Effront B922*
products; Sterilising ——. (P) Andrews and others .. B651
substances; Disintegrating ——. (P) Thomson B81
substances; Preservation of —— by cooling. (P) Ottesen B310

Foods for animals; Manufacture of ——. (P) Molassine Co., and others B274
canned; Vitamin C in ——. Eddy and Kohman B195
canned; Volumetric determination of tin in ——. Willey 70T, B273
Contamination of —— with zinc. Sale and Badger B273
Flavouring —— with vanillin. (P) Soc. Chim. Usines du Rhône B533
Furnace for ashing —— in porcelain crucibles. Martin .. B539
Manufacture of cereal ——. (P) Schoen B149
Manufacture of poultry and animal —— from waste and condensed foods and the like. (P) Lewis B149
Preparation of fish offal for cattle- and poultry- ——. (P) Lewis B572
Preservation of —— by sterilisation. Dugdale .. 17T, B273
Preserving ——. (P) Scheib and Koch B149

Foodstuffs; Alkalinity of ash of ——. Pfyl and Samter.. .. B229
Calculation of extract in —— by Windisch's method. Grossfeld B961
Determination of purine bases in ——. Kollmann B309
Mustard flour and oil as preservatives for ——. Delage .. B69
Preparation of vitamin-free ——. (P) Funk and Freedman B994
Testing for incipient putrefaction of ——. Tillmans and Otto B488

Formaldehyde. Von Wartenberg and others B692
Action of ozone on hydrocarbons with special reference to production of ——. Action of ozone on n-hexane. Blair and others 287T, B807
"Alcoholic fermentation" of —— by osmium. Müller .. B232
and aliphatic amines; Manufacture of condensation products of —— for use as vulcanisation accelerators. (P) Shepard and others B35, B1020
Alleged reduction of carbon dioxide to —— by hydrogen peroxide, and the assimilation hypothesis of Thunberg. Bach and Monosson B491
Behaviour and detection of —— in plants and plant substances. Sabalitschka and Riesenberg B346
Behaviour of —— in titration of amino-acids. Tarugi .. B444
Behaviour of —— towards ammonia. Ferrini B925
Combustion of methane to ——. Tropsch and Roelen .. B232
Compositions containing ——. (P) Hirchberg B400
Detection of ——. Sumner B204
Determination of —— and its behaviour when heated with lime. Tarugi B692
Determination of —— in presence of acetone and acetaldehyde and of formaldehyde and acetone in presence of each other. Mach and Herrmann B446
Determination of —— in wine. Seiler B486
Effect of —— in determination of sugar and starch in plants. Sabalitschka and Riesenberg B306
Electrolytic oxidation of ——. Del Fresno B653
Electrometric determination of ——. Müller and Löw .. B847
from formic acid. Meils B888
Influence of —— on the haricot bean. Nicolas and Nicolas B27
Influence of —— on function of plant enzymes. Sabalitschka B842
Interaction of —— with fused caustic alkalis. Fry and others B979
Oxidation of hydrocarbons with special reference to production of ——. Wheeler and Blair B75
-phenol condensation product type; Production of articles of the ——. (P) Indurit Products Co., and Fairgrieve B756
and phenol; Viscosity of syrupy condensation products of ——. Drummond 328T
-phenolic varnishes and the like; Manufacture of ——. (P) Filhol B797*
and phenols; Manufacture of artificial resins from ——. (P) Pollack and Möhring B63
and phenols; Manufacture of resinous condensation products from ——. (P) Perl und Co. B879

Formaldehyde—*continued.*
and phenols; Manufacture of resins from ——. (P) Bakelite Ges., and Hessen B566
Polymerisation of —— by *Phaseolus multiflorus* and pelargonium, with formation of carbohydrates. Sabalitschka and Riesenberg B306
Preparation of ——. (P) Meister, Lucius, u. Brüning .. B449
Preserving partly polymerised ——. (P) Meyer, and International Chemical Co. B353
Reaction between soya sauce and ——. Ishio and Endo .. B30
Shipping containers for ——. (P) White, and Perth Amboy Chemical Works B233
soap; Manufacture of potassium ——. (P) Becker .. B390
and urea or its derivatives; Manufacture of condensation products of ——. (P) Goldschmidt and Neuss .. B185
and urea; Pollopas, a condensation product of ——. Pollak and Ripper B878
and urea, thiourea, or their derivatives; Manufacture of resinous condensation products from ——. (P) Pollak B720, B953, B987

Formalin. *See* Formaldehyde.
Formamide; Preparation of ——. (P) Meyer B450
Formates; Action of —— on growth of certain plants in potcultures. Richet, jun. B646
Manufacture of ——. (P) Auerbach B966
Preparation of pure ——. (P) Elektrochem. Werke, and others B448
Production of alkaline-earth ——. (P) Badische Anilin u. Soda Fabr. B537
Production of —— from carbon monoxide and bases in presence of water. Fischer and Von Philippovich .. B535
Formic acid; Catalytic decomposition of ——. Müller and Müller B1029
Determination of —— in wine. Seiler B486
Formaldehyde from ——. Meils B888
Manufacture of ——. (P) Badische Anilin u. Soda Fabr. B731
Preparation of highly concentrated ——. (P) Koepp und Co. B811
Production of —— from carbon monoxide and steam and from carbon dioxide and hydrogen. Schrader B574
Test for ——. Masriera B1020
Volumetric determination of ——. Riesser B75
Formol. *See* Formaldehyde.

5-Formylaminoacenaphthene. Morgan and Stanley 344T

Fractionating columns. (P) Mackenzie and others B360
columns; Efficiency of ——. Calingaert and Huggins, jun. B735
complex mixtures and recovery of volatile liquids. Lemale B542
tower for pressure cracking stills and the like. (P) Bell, and Sinclair Refining Co. B550
Frangula emodin; Synthesis of ——. Eder and Widmer .. B113

Freezing points of pure substances and eutectic mixtures; Apparatus for determination of ——. Washburn B452

Fruit; Canned ——. Savage and Hunwicke B148
Colouring citrous ——. (P) Denny B149
Dehydrating ——. (P) Elspass and Maloney B090
Disinfecting ——. (P) Pichler and Wöber B962
dried; Determination of moisture in ——. Hills B70
juices; Clarifying ——. (P) Gusmer B350*
juices extracted by pressure; Composition of ——. André B148
juices; Gel-forming power of ——. Wendelmuth B612
juices; Preserving ——. (P) Coombs B572
juices; Removing sulphur dioxide from preserved ——. (P) Spitalsky B1027
juices; Treatment of acid —— by hot inversion. (P) Mathis B648
or the like; Processes of treating ——. (P) Brogden, and the Brogden Co. B489
Microchemical detection of acetaldehyde in ——. Griebel B922
Preservation of ——. (P) Stubback B489
Preserving —— and apparatus for treating air for use in the process. (P) Cuthbertson B690
Ripening of ——. Tractta-Mosca and others B273
Vacuum dehydration of ——. Buchanan and Zook B148

Fuel:
(P) Lepsius B818
(P) Marignon B858
(P) Sutcliffe B1003
briquettes. *See under* Briquettes.
Combustion of solid ——. (P) Baum, and Westinghouse Electric and Manuf. Co. B244
containing bitumen; Drying of damp ——. (P) Rude .. B662
Distillation of ——. (P) Electrical Improvements Ltd and Weeks B1004
distillation shafts; Internally heated ——. (P) Metallbank und Metallurgische Ges. A.-G. B975
Distribution of —— in reverberatory furnaces. (P) Easter, and American Smelting and Refining Co. B301
Drying —— with steam. (P) Strache B898
Evolution of hydrocarbons from ——. (P) Wisner, and Carbocite Co. B548
for firing bricks and other purposes. (P) Curtiss B1003
Fractional distillation of ——. (P) Christians B821
for internal-combustion engines; Preparation of a carburetted ——. (P) Terrisse B626
Kiln for recovery of by-products from ——. (P) Newberry B367*
Liquid ——:
(P) Ferrer and Power B626
(P) Jacobs B460
(P) Records B503, B975*
liquid; Burners for ——:
(P) Cuénod B934*
(P) Wilson and Co., and Foden B780*

PAGE

Fuel—*continued*.
liquid; Burning ——. (P) Norton and Hobbs B975*
liquid; Manufacture of —:
(P) Black B210
(P) Butler B503
(P) Byrnes B210
(P) Charbonneau B210
(P) Dolfen and Hostettler B1005
(P) Plauson's Forschungsinstitut B605
liquid; Manufacture of compound ——. (P) Clement, and Kent County Oil Corp. B85
Low-temperature distillation of ——. (P) Merz and McLellan, and Weeks B1004
Manufacture of artificial ——. (P) Diers and others .. B587
Manufacture of carbonised ——:
(P) Strafford and Pick B932
(P) Sutcliffe B625
Manufacture of coked, semi-coked, or fused ——. (P) Trent, and Trent Process Corp. B208
Manufacture of useful products from ——. (P) Hinselmann B548
powdered; Burners for ——. (P) Brightmore B818
powdered; Combustion of ——. (P) Wood B411*
powdered; Combustion of —— alone or together with liquid or gaseous fuel in furnaces, kilns, and the like. (P) Procter B587
powdered; Firing with ——. (P) Wood B411*
powdered; Furnaces burning ——. (P) Entreprises Simon Carves, and Soc. Anon. pour l'Utilisation des Combustibles B163
pulverised; Apparatus for burning ——. (P) Smith, and Wellman Smith Owen Engineering Corp. B818
pulverised; Furnace for ——. (P) Barnhurst, and Fuller Engineering Co. B121
pulverised; Furnaces for burning ——. (P) Deutsche Babcock u. Wilcox Dampfkessel-Werke A.-G. B40
pulverised; Production of —— from soda pulp black liquor. (P) Plumstead, and Jessup and Moore Paper Co. .. B740
pulverised; Use of —— for steam raising. Coates 161T
pulverised; Water-cooled furnaces for burning ——. (P) Goodrich and others B584*
pulverisers; Solid ——. (P) Soc. Anon. pour l'Utilisation des Combustibles B586
pulverulent; Preparation of —— for the purpose of converting their ashes into hydraulic cement. (P) Bouchaud-Praceiq B702
Purifying ground —— by agglomeration in a bath of water mixed with oil. (P) Soc. de Recherches et de Perfectionnements Industriels B208
Recovering —— from residues. (P) Ullrich and others .. B1006*
residues; Manufacture of cement or cement mortars from ——. (P) Gaertner B983
Solidified liquid ——. (P) Kranich, and Sternau and Co .. B779
Solidified oil ——. (P) Illemann B85
Treatment of ——. (P) Electrical Improvements, Ltd., and Merz B244
Utilisation of ——. (P) Brandes B45
Fuel Research Board; Report of —— for years 1922 and 1923. Production of air-dried peat B284
Fuels; Composition of gases evolved on heating solid ——. Lebeau B585
Content of combined water in solid ——. Kreulen B408
Determination of moisture, ash, and volatile matter in solid ——. Goutal B545
Determination of volatile constituents in solid ——:
De Waard B896
Kreulen B817
Distillation, degasification, or gasification of solid ——. (P) Hellmann B548
for internal-combustion engines. (P) Midgley, jun., and General Motors Research Corp. B165
liquid; Calorific value of ——. Morpurgo B285
liquid; Cracking ——. (P) Helfenstein B503
liquid: Preparation of —— from vegetable oils. Gallo and Corelli B458
liquid: Production of —— containing alcohol. (P) Lorlette B85
liquid U.S. Government specification for —— and methods of testing B660
Maximum temperatures and pressures attainable in combustion of gaseous and liquid ——. Goodenough and Felbeck B817
Motor ——. *See under* Motor.
Fugutoxin. Ishiwara B887
Fuller's earth. *See under* Earth.
Fulling agents capable of dissolving fats; Manufacture of ——. (P) Gips B62
textile materials. (P) Meister, Lucius, u. Brüning .. B90
Fume absorber for the laboratory. Patterson 282T
Collection of metallurgical ——. (P) Doremus and Grosvenor B679
Fumes resulting from chemical reactions; Size of the particles of ——. Remy B867
Fuming liquids; Apparatus for analysis of ——. Bosshard .. B376
Fungi: Thread ——. *See* Hyphomycetes.
Vitamin content of various edible ——. Hara B30
Fungicidal action of soap solutions. Schmidt B765
products; Manufacture of ——. (P) Koholyt A.-G. .. B845
Fungicides:
(P) Bayer und Co. B534
(P) Meister, Lucius, u. Brüning .. B804, B845
Fur; Carroting ——. (P) Parks B938
dermatitis due to faulty dyeing. Parsons B864
Radioactive ——. (P) Tapparelli B481

PAGE

Furfural; Colorimetric determination of ——. Youngburg and Pucher B1028
and its derivatives; Reduction of —— with platinum oxide as catalyst. Kaufmann and Adams B152
Design of column stills for distilling mixtures of water and ——. Mains B855
Determination of ——. Pervier and Gortner B68
as lacquer coating solvent. Gardner B756
from maize cobs; Economic aspect of production of ——. Mains and La Forge B445
from pentosans in wood cellulose; Determination of ——. Powell and Whittaker .. 85T, B873
Production of a disinfectant containing ——. (P) Aschkenasi B491
Production of —— from maize cobs and oat hulls. La Forge B274
Production of —— from vegetable materials containing pentosans. (P) La Forge and others B76
Furnace atmosphere indicator. (P) Hill B544
linings and the like. (P) Loke B295
linings; Manufacture of basic ——. (P) Hodson B748
linings; Refractory blocks for ——. (P) Thornton and Illingworth B675
operations; Conducting ——. (P) Skinner B380*
Furnaces:
(P) Bennis B973*
(P) Harrison, and Drying Systems, Inc. B657
(P) Tanler B1000
for annealing and tempering. (P) Speck and Kennedy .. B951*
Annular muffle ——. (P) Woodall, Duckham and Jones (1920), Ltd., and Duckham B423
Apparatus for controlling flow of ore through roasting ——. (P) Söhnlein, and Allis-Chalmers Manuf. Co. B562
Apparatus for discharging rotary tube ——. (P) Chem. Fabr. Griesheim-Elektron B239
for ashing food and excreta in porcelain crucibles. Martin .. B539
Attaining high temperatures of combustion in burning fuel in brick ——. (P) Helbig B382
for bagasse and liquid fuel. (P) Almagro B163
blast-; Construction of ——. (P) Kirby B138*
Blast of cupola- and blast ——. Gottschalk, and Reinshagen und Co. B915*
blast-; Effect of combustibility of coke on stock descent in ——. Royster and Joseph B470
blast-; Fixation of nitrogen as cyanide in ——. Franchot .. B376
blast-; Formation of metallic obstructions in ——. Bogitch B470
blast-; Gruner index of —— blown with oxygen-enriched air. Derclaye B135
blast-; Means for facilitating reactions in ——. (P) Deschamps B697
Blast for metallurgical ——. (P) Van Nuys, and Air Reduction Co. B388
blast-; Method of operating ——. (P) Coffin and McCauley B562
blast-; Method of operating —— and similar furnaces. (P) Kirby B950
blast-; Reducing coke consumption in ——. (P) Thomas .. B752
blast-; Smelting in ——. (P) Cavers B950
blast-; Tuyères of ——. (P) Beaton B562*
blast-; Use of air more or less enriched with oxygen in ——. Seigle B599
for burning coal dust, powdered fuel, and the like. (P) Belavoine B40
burning powdered solid fuels. (P) Entreprises Simon Carves, and Soc. Anon. pour l'Utilisation des Combustibles B163
Calcining ——. (P) Hults, and Mathieson Alkali Works .. B896
Carbonising ——. (P) Berthelon B83
Coal dust and air supplies in Siemens-Martin and like ——. (P) Fellner und Ziegler B951*
Combustion of fuel in ——. (P) De Couninck B932
Combustion of powdered and fluid fuel in ——. (P) Procter B587
Considerations affecting the thermal balance of ——. Linguet B39
Construction of, and method of operating reverberatory heating ——. (P) Deuley B40
Crucible and like ——. (P) Telsen B718*
Cupola ——. *See under* Cupola.
for determination of fusing point of coal ash. Kaplan B775
Device for promoting combustion of carbon monoxide in ——:
(P) Craig B163
(P) Craig, and Carbon Monoxide Burner Co. B163
for dry distillation of waste cellulose liquors and similar masses. (P) Rinman and others B374*
Electric:
(P) Baily B876
(P) Bennett, and Scovill Manuf. Co. B718
(P) Beyer B718
(P) Cadwell, and Electric Railway Improvement Co. B563
(P) Callaghan and Uihlein B524
(P) Clifford, and Scovill Manuf. Co. B638
(P) Colby, and Metropolitan-Vickers Electrical Co. B563
(P) Colby, and Westinghouse Electric and Manuf. Co. B524
(P) Collins, and General Electric Co. B951
(P) Kalling B951
(P) Leonarz B718
(P) Tagliaferri B182
(P) Weaver, and Weaver Co. B639
(P) Westinghouse Electric and Manuf. Co. .. B390*, B680
(P) Wild and Barfield B263
Electric annealing, hardening, and smelting ——. (P) Coradi B180
electric; Apparatus for treating ——. (P) Bulley B301
Electric arc ——. (P) Hadaway, jun. B795*
Electric arc —— for burning porcelain, refractory material, etc. (P) Siemens-Schuckertwerke Ges. B134
electric arc; Covers for ——. (P) Fox B302*
electric blast-; Gas economy of ——. Durrer B677
Electric —— for calcining limestone. (P) Ewerbeck .. B557

Furnaces—*continued*.
electric; Forming continuous electrodes for ——. (P) Helfenstein .. B563
Electric granular carbon resistor ——. Austin .. B263
Electric graphite resistance ——. Bryan and others .. B794
Electric —— and heating elements therefor. (P) Westinghouse Electric and Manuf. Co. .. B680
electric; Heating metals or alloys in ——. (P) Kalling and others .. B339
Electric —— for heating in a vacuum to a high temperature. Lebeau and Picon .. B476
Electric induction ——:
(P) Brayton, and Induction Furnace Co. .. B182
(P) Brophy .. B638
(P) Frick .. B302*
(P) Rentschler, and Westinghouse Lamp Co. .. B340
electric induction; Heat control for ——. (P) Elsdon-Dew and others .. B476
Electric induction —— and other apparatus heated by induction. (P) Northrup, and Ajax Electrothermic Corp. .. B794
electric; Means for producing a sooty vapour in ——. (P) Little, and Westinghouse Electric and Manuf. Co. .. B182
Electric melting ——. (P) Gregg, and Whiting Corp. .. B138
Electric —— for melting metals. (P) Bennett, and Scovill Manuf. Co. .. B138
electric; Mercury, poisoning from high-frequency induction ——:
Jordan and Burrows .. B876
Turner .. B794
electric; Method of feeding —— with current so as to keep power consumed constant. (P) Quattrino .. B62
Electric muffle ——. (P) Valentine, and General Electric Co. B951
Electric ——, particularly for melting and treatment of composite metals and alloys. (P) Lombardi .. B522
Electric —— with precipitator for producing zinc oxide. (P) Thomson and Fitzgerald .. B787
Electric resistance ——:
(P) Hancock and Hancock .. B138
(P) Little, and Westinghouse Electric and Manuf. Co. B182
(P) Reid, and Westinghouse Electric and Manuf. Co. B101
electric; Resistance elements for ——. (P) Seibert .. B101
electric resistance; Heating elements for rotating ——. (P) Finspongs Metallverks Aktiebolag .. B752
Electric shaft ——. (P) Holmgren .. B794
Electric smelting ——:
(P) Kawal .. B221
(P) Shawhan and Sagebiel .. B523
Electric smelting —— and feeding and distributing apparatus therefor. (P) Klugh, and Federal Phosphorus Co. .. B638
Electric smelting —— and method of operating them. (P) Sethman, and Electric Research Co. .. B339
Electric —— for smelting ores. (P) Dow .. B21
electric steel; Operation of ——. (P) Dixon .. B637
Electric —— for welding, tempering, burning, or for heating for other purposes. (P) Cornelius .. B1018
Electrically heated ——. (P) Dixon Co. .. B468
Enclosed metallurgical ——. (P) General Electric Co. .. B875
Gas- or oil-heated smelting ——. (P) Bäumert .. B793
for heat treatment of metals. (P) Bellis Heat Treating Co. .. B874
Heating melting —— or the like with oxygen-enriched air. (P) Weymann, and Eisen u. Stahlwerk Hoesch .. B180
for heating metal plates and other articles. (P) Lacke and Boyer B951*
for heating retorts for destructive distillation. (P) Morrison, and Dow Chemical Co. .. B8
for heating retorts for reduction of ores. (P) Tanier .. B475
Heating and smelting ——. (P) Eisen- und Stahlwerk Hoesch B602*
for heating tin-plates and the like. (P) Hughes and others .. B986*
Helical-hearth roasting ——. (P) Bracq-Laurent .. B182*
and the like; Operating the crusher rolls employed with ——. (P) Wollaston .. B85*
Liquid-fuel ——. (P) Burdon and others .. B622*
Mechanically rabbled roasting ——. (P) Geschwind .. B679
for melting and casting metals. (P) Benjamin .. B601
Metallurgical ——. (P) Millward .. B20
Method of operating ——. (P) Clark .. B1014
Muffle ——. (P) Tone, and Carborundum Co. .. B830
Muffle, enamelling, and like. (P) Baud 'Huin .. B239
muffle-; Operation of ——. (P) Roberts .. B3
Oil blast for ——. (P) Grabill, and American Smelting and Refining Co. .. B301
Oil-fired ——. (P) United Oil and Coal Corp., and Roberts B544*
Oil-fired —— for chemical work. (P) Allen, and General Chemical Co. .. B322
Open-hearth ——:
(P) Kemp .. B718*
(P) Loftus .. B717
open-hearth; Absorption of sulphur from the heating gas in Siemens-Martin ——. Jung .. B750
open-hearth; Absorption of sulphur from producer-gas in ——. Nead .. B384
Open-hearth —— heated by gas. (P) Schreiber .. B602
open-hearth; Manufacture of basic refractories for ——. (P) Meyer, and Davison Co. .. B514
open-hearth; Recovery of waste heat in operation of ——. Dyrssen .. B518
open-hearth; Siemens-Martin —— with coal dust firing. (P) Vogt and Kirchhof .. B792
Ore-roasting ——. (P) Leavitt and Hughes .. B221
for pulverised fuel:
(P) Barnhurst, and Fuller Engineering Co. .. B121
(P) Deutsche Babcock und Wilcox Dampfkessel-Werke A.-G. .. B40
Refractory lining for metallurgical ——. (P) Hale .. B679

iron. (P) Herman .. B221
iron or steel wire and other articles. (P) Herman .. B476*
New method of ——. Bablik .. B209
Gambier; Differentiation of Indian cutch and cube ——. Biggs B758
Garbage and the like; Apparatus for treating ——. (P) Overton B534
Gas absorption towers; Extension of theory of ——. Van Arsdel B321
Adsorption apparatus for determination of organic vapours in ——. Kattwinkel .. B546
analysis; Absorption pipette for ——. Saunders .. B116
-analysis apparatus:
(P) Cooper and Sisler .. B80
(P) Uehling .. B358
-analysis apparatus; Bone-Wheeler ——. Grice and Payman B771
-analysis burette. Moldenhauer .. B734
analysis; Influence of dissociation of copper oxide in ——. Bunte and Wunsch .. B582
-analysis methods; Exact —— for analysis of gaseous fuels. Ott .. B932
analysis; New method of ——. Determination of hydrogen in electrolytic oxygen. Geberth .. B204
analysis; New method of micro- ——. Reeve .. B928
Apparatus for distilling —— from non-coking bituminous materials at low temperatures. (P) Koppers .. B4

PAGE

Fuel—*continued*.
liquid ; Burning ——. (P) Norton and Hobbs B975*
liquid ; Manufacture of —— :
(P) Black B210
(P) Butler B503
(P) Byrnes B210
(P) Charbonneau B210
(P) Dolfen and Hostettler B1005
(P) Plauson's Forschungsinstitut B665
liquid ; Manufacture of compound ——. (P) Clement, and Kent County Oil Corp. B85
Low-temperature distillation of ——. (P) Merz and McLellan, and Weeks B1004
Manufacture of artificial ——. (P) Diers and others B587
Manufacture of carbonised —— :
(P) Strafford and Pick B932
(P) Sutcliffe B625
Manufacture of coked, semi-coked, or fused ——. (P) Trent, and Trent Process Corp. B208
Manufacture of useful products from ——. (P) Hinselmann B548
powdered ; Burners for ——. (P) Brightmore B818
powdered ; Combustion of ——. (P) Wood B411*
powdered ; Combustion of —— alone or together with liquid or gaseous fuel in furnaces, kilns, and the like. (P) Procter B587
powdered ; Firing with ——. (P) Wood B411*
powdered ; Furnaces burning ——. (P) Entreprises Simon Carves, and Soc. Anon. pour l'Utilisation des Combustibles B163
pulverised ; Apparatus for burning ——. (P) Smith, and Wellman Smith Owen Engineering Corp. B818
pulverised ; Furnace for ——. (P) Barnhurst, and Fuller Engineering Co. B121
pulverised ; Furnaces for burning ——. (P) Deutsche Babcock u. Wilcox Dampfkessel-Werke A.-G. B40
pulverised ; Production of —— from soda pulp black liquor. (P) Plumstead, and Jessup and Moore Paper Co. B740
pulverised ; Use of —— for steam raising. Coates 161T
pulverised ; Water-cooled furnaces for burning ——. (P) Goodrich and others B584*
pulverisers ; Solid ——. (P) Soc. Anon. pour l'Utilisation des Combustibles B586
pulverulent ; Preparation of —— for the purpose of converting their ashes into hydraulic cement. (P) Bouchaud-Praceiq B702
Purifying ground —— by agglomeration in a bath of water mixed with oil. (P) Soc. de Recherches et de Perfectionnements Industriels B208
Recovering —— from residues. (P) Ullrich and others B1006*
residues ; Manufacture of cement or cement mortars from ——. (P) Gaertner B983
Solidified liquid ——. (P) Kranich, and Sternau and Co B779
Solidified oil ——. (P) Illemann B85
Treatment of ——. (P) Electrical Improvements, Ltd., and Merz B244
Utilisation of ——. (P) Brandes B45
Fuel Research Board ; Report of —— for years 1922 and 1923. Production of air-dried peat B284
Fuels ; Composition of gases evolved on heating solid ——. Lebeau B585
Content of combined water in solid ——. Kreulen B408
Determination of moisture, ash, and volatile matter in solid ——. Goutal B545
Determination of volatile constituents in solid —— :
De Waard B896
Kreulen B817
Distillation, degasification, or gasification of solid ——. (P) Hellmann B548
for internal-combustion engines. (P) Midgley, jun., and General Motors Research Corp. B165
liquid ; Calorific value of ——. Morpurgo B285
liquid ; Cracking ——. (P) Helfenstein B503
liquid ; Preparation of —— from vegetable oils. Gallo and Corelli B458
liquid ; Production of —— containing alcohol. (P) Lorlette B85
liquid U.S. Government specification for —— and methods of testing B660
Maximum temperatures and pressures attainable in combustion of gaseous and liquid ——. Goodenough and Felbeck B817
Motor ——. *See under* Motor.
Fugutoxin Ishiwara B887
Fuller's earth. *See under* Earth.
Fulling agents capable of dissolving fats ; Manufacture of ——. (P) Gips B62
textile materials. (P) Meister, Lucius, u. Brüning B90
Fume absorber for the laboratory. Patterson 282T
Collection of metallurgical ——. (P) Doremus and Grosvenor B679
Fumes resulting from chemical reactions ; Size of the particles of ——. Remy B867
Fuming liquids ; Apparatus for analysis of ——. Bosshard B376
Fungi : Thread ——. *See* Hyphomycetes.
Vitamin content of various edible ——. Hara B30
Fungicidal action of soap solutions. Schmidt B765
products ; Manufacture of ——. (P) Koholyt A.-G. B845
Fungicides :
(P) Bayer und Co. B534
(P) Meister, Lucius, u. Brüning B804, B845
Fur ; Carroting ——. (P) Parks B938
dermatitis due to faulty dyeing. Parsons B864
Radioactive ——. (P) Tapparelli B481

Furfural ; Colorimetric determination of ——. Youngburg and Pucher B1028
and its derivatives ; Reduction of —— with platinum oxide as catalyst. Kaufmann and Adams B152
Design of column stills for distilling mixtures of water and ——. Mains B855
Determination of ——. Pervier and Gortner B68
as lacquer coating solvent. Gardner B756
from maize cobs ; Economic aspect of production of ——. Mains and La Forge B445
from pentosans in wood cellulose ; Determination of ——. Powell and Whittaker 85T, B873
Production of a disinfectant containing ——. (P) Aschkenasi B491
Production of —— from maize cobs and oat hulls. La Forge B274
Production of —— from vegetable materials containing pentosans. (P) La Forge and others B76
Furnace atmosphere indicator. (P) Hill B544
linings and the like. (P) Loke B295
linings ; Manufacture of basic ——. (P) Hodson B748
linings ; Refractory blocks for ——. (P) Thornton and Illingworth B675
operations ; Conducting ——. (P) Skinner B380*
Furnaces :
(P) Bennis B973*
(P) Harrison, and Drying Systems, Inc. B657
(P) Tanler B1000
for annealing and tempering. (P) Speck and Kennedy B951*
Annular muffle ——. (P) Woodall, Duckham and Jones (1920), Ltd., and Duckham B423
Apparatus for controlling flow of ore through roasting ——. (P) Söhnlein, and Allis-Chalmers Manuf. Co. B562
Apparatus for discharging rotary tube ——. (P) Chem. Fabr. Griesheim-Elektron B239
for ashing food and excreta in porcelain crucibles. Martin B539
Attaining high temperatures of combustion in burning fuel in brick ——. (P) Helbig B382
for bagasse and liquid fuel. (P) Almagro B163
blast- ; Construction of ——. (P) Kirby B138*
Blast of cupola- and blast ——. Gottschalk, and Reinshagen und Co. B915*
blast- ; Effect of combustibility of coke on stock descent in ——. Royster and Joseph B470
blast- ; Fixation of nitrogen as cyanide in ——. Franchot B376
blast- ; Formation of metallic obstructions in ——. Bogitch B470
blast- ; Gruner index of —— blown with oxygen-enriched air. Derclaye B135
blast- ; Means for facilitating reactions in ——. (P) Deschamps B697
Blast for metallurgical ——. (P) Van Nuys, and Air Reduction Co. B388
blast- ; Method of operating ——. (P) Coffin and McCauley B562
blast- ; Method of operating —— and similar furnaces. (P) Kirby B950
blast- ; Reducing coke consumption in ——. (P) Thomas B752
blast- ; Smelting in ——. (P) Cavers B950
blast- ; Tuyères of ——. (P) Beaton B562*
blast- ; Use of air more or less enriched with oxygen in ——. Seigle B599
for burning coal dust, powdered fuel, and the like. (P) Belavoine B40
burning powdered solid fuels. (P) Entreprises Simon Carves, and Soc. Anon. pour l'Utilisation des Combustibles B163
Calcining ——. (P) Hults, and Mathieson Alkali Works B896
Carbonising ——. (P) Berthelon B83
Coal dust and air supplies in Siemens-Martin and like ——. (P) Fellner und Ziegler B951*
Combustion of fuel in ——. (P) De Connick B932
Combustion of powdered and fluid fuel in ——. (P) Procter B587
Considerations affecting the thermal balance of ——. Linguet B39
Construction of, and method of operating reverberatory heating ——. (P) Deuley B40
Crucible and like ——. (P) Teisen B718*
Cupola ——. *See under* Cupola.
for determination of fusing point of coal ash. Kaplan B775
Device for promoting combustion of carbon monoxide in —— :
(P) Craig B163
(P) Craig, and Carbon Monoxide Burner Co. B163
for dry distillation of waste cellulose liquors and similar masses. (P) Rinman and others B374*
Electric :
(P) Baily B876
(P) Bennett, and Scovill Manuf. Co. B718
(P) Beyer B718
(P) Cadwell, and Electric Railway Improvement Co. B563
(P) Callaghan and Uihlein B524
(P) Clifford, and Scovill Manuf. Co. B638
(P) Colby, and Metropolitan-Vickers Electrical Co. B563
(P) Colby, and Westinghouse Electric and Manuf. Co. B524
(P) Collins, and General Electric Co. B951
(P) Kalling B951
(P) Leonarz B718
(P) Tagliaferri B182
(P) Weaver, and Weaver Co. B639
(P) Westinghouse Electric and Manuf. Co. B390*, B680
(P) Wild and Barfield B263
Electric annealing, hardening, and smelting ——. (P) Coradi B180
electric ; Apparatus for treating ——. (P) Bulley B301
Electric arc ——. (P) Hadaway, jun. B795*
Electric arc —— for burning porcelain, refractory material, etc. (P) Siemens-Schuckertwerke Ges. B134
electric arc ; Covers for ——. (P) Fox B302*
electric blast- ; Gas economy of ——. Durrer B677
Electric —— for calcining limestone. (P) Ewerbeck B557

PAGE

Gas—*continued.*
retort settings and the like; Apparatus for feeding fuel into furnaces of ——. (P) Williams .. B85*
retorts. (P) Wood .. B704*
retorts; Coke gas producers for heating ——. Terres and Schierenbeck .. B585
retorts; Discharging doors for vertical —— and for other services. (P) Dixon, and West's Gas Improvement Co. B327*
retorts; Refractories for ——, with special reference to silica. Emery .. B674
scrubbers; Producer —— for automobiles. (P) Bamber .. B819
scrubbers and washers; Rotary ——. (P) Gas Light and Coke Co., and Noden .. B326
scrubbing towers; Design and operation of ——. Drane 329T, B971
semi-water-; Apparatus for production of ——. (P) Fajole B625
Separation of sulphur from coal ——. (P) Badische Anilin- und Soda-Fabrik .. B819
from straw; Experimental production of ——. Roethe .. B120
washers:
(P) Firth, Blakeley, Sons and Co., and Wright .. B819
(P) Walter .. B588
washers for removal of tar. (P) King .. B502
washing bottle; Spiral ——. Milligan .. B850
water-; Apparatus for generation of ——. (P) Cerasoli .. B625
water-; Controlling or operating apparatus for production of ——. (P) Gartley and Evans .. B501
water-; Critical study of published results of tests of plant for manufacture of ——. Travers .. 355T
water-; Efficiencies in use of bituminous coking coal for production of ——. Odell .. B284
water-; Equilibrium constants in the formation of ——. Eastman and Evans .. B450
water-; Manufacture of ——. (P) Evans .. B501
water-; Manufacture of carburetted ——:
(P) Evans and others .. B664, B900*
(P) Holden and others .. B933
(P) Smith and Weisser .. B933
water-; Means for controlling or operating apparatus for manufacture of ——. (P) Gartley and Evans .. B819
water-; Method of introducing a steam jet to the fuel bed of an apparatus for production of ——. (P) Haug, and U.G.I. Contracting Co. .. B625
water-; Plants for manufacture of ——. (P) Kirke .. B365
water-; Production of hydrogen from —— by absorption of carbon monoxide by cuprous sulphate in presence of sulphuric acid. Damiens .. B671
water-; Production of methane from ——. (P) Badische Anilin und Soda Fabrik .. B859
water-; Production of "synthol" by synthesis from ——. Fischer and Tropsch .. B1001
water-; Self-steaming plant for manufacture of blue ——. (P) Rusby, and United Gas Improvement Co. .. B286
works; Distillation of ammoniacal liquors, tars, oils, and other liquids obtained in ——. (P) Cabrier .. B589
Gaseous fuel. (P) Harris, and Carbo-Oxygen Co. .. B819, B819
fuel; Manufacture of ——. (P) Rose, and Carbo-Oxygen Co. B778
fuels; Exact gas-analytical methods for analysis of ——. Ott B932
mixture; Relation between diffusion of a —— and its pressure. Wussow .. B281
mixtures; Apparatus for analysing ——:
(P) Rodhe, and Svenska Aktiebolaget Mono .. B540*
(P) Siemens und Halske A.-G. .. B454
mixtures; Apparatus for continuous analysis of ——. (P) Union Apparatebauges. .. B814
mixtures, Apparatus for determining the volumetric proportion of a gas or gases in ——. (P) Woodroffe, and Scott, Ltd. B582
mixtures; Apparatus for separating and liquefying ——. (P) Mewes .. B1000
mixtures; Detecting or estimating and recording combustible constituents in ——. (P) Uehling .. B772*
mixtures; Determination of organic vapours in —— by means of active charcoal. Berl and Wachendorff .. B546
mixtures; Generation of highly combustible ——. (P) Howard B549
mixtures; Precipitation of constituents of —— by cooling. (P) Soc. l'Azote Français .. B17
mixtures; Production of explosive or combustible ——. (P) Lamplough and Lamplough .. B1004
mixtures rich in methane or ethylene; Preparation of ——. (P) Bayer und Co. .. B502
mixtures; Separating constituents of ——. (P) Van Nuys, and Air Reduction Co. .. B698
mixtures; Separation of ——:
(P) L'Air Liquide .. B712
Shepherd and Porter .. B43
products from pyrogenic decomposition of definite compounds; Thermal fractionation of ——. Lebeau .. B700
reactions; Ionisation produced in certain ——. Brewer .. B907
Gases: Absorbing —— and carrying out catalytic reactions. (P) Meister, Lucius, und Brüning .. B698
Absorbing —— in liquids. (P) Wolf .. B737
Apparatus for absorbing —— by means of charcoal. (P) Meister, Lucius, und Brüning .. B237
Apparatus for cleaning or cooling ——, or otherwise treating them with liquids. (P) Anrig and Brücklmeyer .. B117
Apparatus for detecting the presence of chemically reactive —— in the air. (P) Gebr. Himmelsbach .. B379
Apparatus for determining specific gravity of ——. (P) Liese .. B696
Apparatus for dissolving ——. (P) Aquazone Corp. .. B321
Apparatus for drying ——. Jackson .. B280
Apparatus for effecting intimate contact of liquids and ——. (P) Wright, and Meldrums, Ltd. .. B40
Apparatus for electrical precipitation of suspended particles from ——:
(P) Metallbank u. Metallurgische Ges. .. B773
(P) Welch, and International Precipitation Co. .. B239

PAGE

Gases—*continued.*
Apparatus for electrical purification of ——:
(P) Kirchhoff und Co. .. B4, B930
(P) Thein .. B816
Apparatus for electrical purification of ——, especially for separation of hot components. (P) Siemens-Schuckertwerke Ges. .. B406
Apparatus for electrical treatment of ——. (P) Schmidt, and International Precipitation Co. .. B119
Apparatus for filtering dust-laden ——. (P) Thomson and Nisbet .. B622
Apparatus for formation and separation of solids from —— by heat interchange. (P) Field .. B737*
Apparatus for identifying ——. Durand .. B968
Apparatus for liquefying and separating ——. (P) Kautny .. B773
Apparatus for precipitating suspended particles from —— by means of a rotating electric field. (P) Gelsenkirchener Bergwerks A.-G. .. B498
Apparatus for producing a counter-current action between liquids and large quantities of ——. (P) Metan Ges. .. B283
Apparatus for purifying ——:
(P) Sperr, jun., and Koppers Co. .. B164
(P) Wadsworth .. B360
Apparatus for purifying —— by electrochemical means. (P) Nolze .. B405
Apparatus for reaction between vapours or —— and liquids. (P) Permutit A.-G., and Schüler .. B406
Apparatus for removing —— from liquids. (P) Signal Ges. .. B160*
Apparatus for separating —— from a mixture. (P) Hertz, and N. V. Philips' Gloeilampenfabr. .. B622*
Apparatus for separating and recovering ——. (P) Barnebey .. B855
Apparatus for separating tar from ——. (P) Bradley, and Research Corp. .. B9
Apparatus for treating ——. (P) Barnebey .. B855
Apparatus for treating liquids with ——. (P) Palmer .. B816
Apparatus for treating liquids or solids with ——. (P) Sleck, jun., and Sleck and Drucker, Inc. .. B3
Apparatus for treatment of —— in the electric arc. (P) Rankin B639
burner-; Purification of ——. (P) Krafft .. B868
Cleaning ——. (P) Metallbank und Metallurgische Ges. .. B665
from combustion; Non-explosive mass supplying high-tensioned ——. (P) Kochmann .. B503*
Continuous removal of sulphur compounds from ——. (P) Badische Anilin u. Soda Fabr. .. B778
corrosive; Purification of ——. (P) Curme, jun., and others .. B57
Desulphurising ——. (P) Badische Anilin und Soda Fabrik B1004, B1004
Determination of calorific value of —— by Hempel's method. Foerster and Grünert .. B120
Determination of density of ——. Pollitzer .. B694
dissolved in liquid; Porous mass for use as an absorbent for ——. (P) Pintsch A.-G. .. B819
distillation; Production of ammonium chloride from hot ammoniacal ——. (P) Christensen .. B975
Electrical precipitation of suspended particles from ——:
(P) Metallbank u. Metallurgische Ges. .. B405, B622
(P) Schmidt, and International Precipitation Co. .. B930
(P) Weiskopf, and International Precipitation Co. .. B622
(P) Wolcott, and International Precipitation Co. .. B160
Electrical purification of ——:
(P) Elektrische Gasreinigungs-Ges., and Rohmann B282, B283
(P) Gelsenkirchener Bergwerks-A.-G. .. B698
(P) North and Loosli .. B406
employed in continuous processes, especially in distillation of coal; Heating of ——. (P) Lengersdorff u. Co. .. B409
evolved on heating solid fuels; Composition of ——. Lebeau .. B585
flue-; Apparatus for analysing ——. (P) Siemens und Halske A.-G. .. B454
flue-; Determination of carbon monoxide and carbon dioxide in ——. (P) Siemens und Halske A.-G. .. B320
flue-; Removing dust, sand, soot, and other foreign bodies from ——. (P) Weller .. B366
Forced convection of heat in ——. Rice .. B541
furnace-; Analysis of ——. (P) Alsberg and Ralph .. B496
Ignition of —— by a heated surface. Mason and Wheeler .. B897
Ignition of —— by the impulsive electrical discharge. Wheeler B897
or the like; Separating ——. (P) Mazza, and A. F. Syndicate .. B855*
liquefied; Devices for regulating evaporation of ——. (P) Kautny .. B621
Liquefying ——. (P) Jewell, and Chlorine Products Co. .. B909
and liquids; Apparatus for accomplishing physical and chemical reactions between ——. (P) Boulogne and Meillassoux .. B88
and liquids; Apparatus for bringing —— into intimate contact. (P) Holmes and Co., and others .. B118
and liquids; Apparatus for effecting intimate contact of ——. (P) Lloyd and others .. B159
and liquids; Apparatus for producing interaction between ——. (P) Marshall, and Koppers Co. .. B205
and liquids; Apparatus for producing intimate mixture between ——. (P) Bayer und Co. .. B81, B456
and liquids; Device for effecting contact between ——. (P) Atkins and others .. B774
from low-temperature carbonisation; Analysis of ——. Dietz and others .. B207
Metallurgical apparatus for treating liquids with ——. (P) Greenawalt .. B181
Method for studying rapid absorption of —— by liquids. Ledig and Weaver .. B359
Oxidising ——. (P) Hechenbleikner, and Southern Electro-Chemical Co. .. B672
Performing catalytic reactions between ——. (P) Wolfes, and Merck Chem. Fabr. .. B238
Production of compressed —— by electrolysis u pressure. (P) Badische Anilin u. Soda Fabr. .. B718

Gases—continued.
Purification of —— from hydrogen sulphide etc.
(P) Ramsburg, and Koppers Co. .. B327*
(P) Shaw, and Koppers Co. .. B166*
Purifying ——:
(P) Bird, and Koppers Co. .. B459
(P) Koppers Co. .. B165, B409
(P) Krafft .. B773
Purifying and sterilising ——. (P) Sauer .. B995
Rapid admixture of hot combustible —— with air. Cray and Garner .. B280
Recovering constituents of mixtures of —— by adsorption. (P) Lorenz .. B930
Recovering valuable products from waste ——. (P) Nordström B13
Recovery of waste ——. (P) Richter, and Brown Co. .. B18
Removal of dust and moisture from ——. (P) Schmies, and Deutsche Luftfilter-Bauges. .. B655
Removal of sulphur compounds from —— free from ammonia. (P) Bayer und Co. .. B820
Removing dust precipitated electrically from ——. (P) Thein .. B816
Removing hydrogen sulphide from ——. (P) Koppers Co. .. B164
Removing hydrogen sulphide and other impurities from ——.
(P) Sperr, jun., and Koppers Co. .. B164
(P) Sperr, jun., and others .. B164
Removing hydrogen sulphide and other noxious constituents from ——. (P) Ramsburg, and Koppers Co. .. B549
Separating ——. (P) Lewis and others .. B621
Separating constituents of mixtures of vapours and ——. (P) Meister, Lucius, und Brüning .. B157, B157
Separating constituents of —— and utilising them in performing work and supporting combustion. (P) Mewes and Mewes .. B621
Separating gases from, or dissolving —— in liquids. (P) Fraisse B40
Separating —— from a mixture. (P) Hertz, and N. V. Philips' Gloeilampenfabr. .. B360*
Separating mixtures of —— by means of charcoal. (P) Meister, Lucius, und Brüning .. B322
Separation of dust, smoke, and the like from ——. (P) Nordström .. B657
Separation of organic —— from air etc. (P) Bayer und Co. .. B622
Separation of substances capable of adsorption, *e.g.*, sulphur, from ——. (P) Badische Anilin- und Soda-Fabrik .. B819
Separation of vapour or vapour and liquid from non-condensable ——. (P) Emmet, and British Thomson-Houston Co. .. B816*
Special case of filtration of suspended particles from ——. Doslos B455
Supersaturation of —— in water and certain organic liquids. Metsch .. B815
Thermal conductivity method for analysis of ——. Palmer and Weaver .. B620
Treatment of articles or material with ——. (P) Peachey Process Co., and others .. B757
Utilisation of waste —— from furnaces. (P) Haller and McLaren B237

Gasifying bituminous fuel. (P) Breisig .. B122
carbonaceous material. (P) Webert .. B325
combustible materials. (P) Pehrson .. B859
fuels. (P) Davies .. B501
heavy combustibles for internal-combustion engines, furnaces, or the like; Atomising and ——. (P) Chilowsky .. B46
of solid fuels; Complete ——. (P) Andrews .. B8

Gasoline; Apparatus for cracking hydrocarbons and recovering ——. (P) Kotzebue and Bowman .. B366
Centrifugal process of recovering —— from natural gas. (P) Turner .. B1005
Iodine value of cracked ——. Miskin .. B701
from natural gas; Composition of ——. Anderson and Erskine B363
from natural gas; Treatment of —— and manufacture of gas therefrom. (P) Kerr .. B327
Purification of cracked ——. (P) Patrick and others .. B1005
Recovery of ——:
(P) Brink .. B124
(P) Hosmer .. B1006, B1006
(P) Loomis, and Standard Development Co. .. B626
(P) Van Warren .. B366
Recovery of —— from heavy hydrocarbons. (P) Black .. B1006
Sodium plumbite or "doctor" test of ——. Brooks .. B624
Solubility of —— in water. Milligan .. B818
Vapour pressure of ——. Rhodes and McConnell .. B120
Volatile yellow colouring matter in cracked ——. Brooks and Parker .. B624

Gattermann synthesis of hydroxyaldehydes; Simplification of ——. Adams and Levine .. B199

Gay Lussac towers; Acid distributor for ——. (P) Patten, and Davison Chemical Co. .. B908

Gelatin; Amphoteric character of —— and its bearing on certain electrochemical phenomena. Frölich .. B948
Analyses of ——. Plimmer and Shimamura .. B529
ash; Analysis of ——. Cattelain .. B606
Behaviour of —— on solution in phenols. Herzog and Krahn B644
Combination of deaminised —— with hydrochloric acid. Hitchcock .. B481
Determination of inorganic impurities in ——. Trotman and Sutton .. B644
Displacement of isoelectric point of —— by formaldehyde. Gerngross and Bach .. B188
Dissolution of ——. Fairbrother .. B721
Electro-osmotic purification of ——. (P) Elektro-Osmose A.-G. B759
films; Preparation of ——. (P) Fritz .. B967
Formation of carbon dioxide during breakdown of —— in the autoclave. Saadikov .. B188
Fractionation of —— by extraction with alcohol and precipitation with aluminium hydroxide and barium chloride. Rakusin .. B481
and glue. Bechhold and Neumann .. B759

Gelatin—continued.
from hide and bone; Isoelectric point of ——. Gerngross and Bach .. B188
Influence of the treatment of the precursors on the character of ——. Knaggs and Schryver .. B955
Isoelectric point of —— at 40°. Hitchcock .. B529
and the like; Cooling and drying ——. (P) Hoffmans .. B482
Manufacture of ——. (P) Pansky .. B956
Manufacture of emulsion ——. (P) Kraus .. B78
manufacture; Method of hydrolysis in ——. (P) Lloyd .. B841
Manufacture of —— suitable for photographic emulsions. (P) Elektro-Osmose A.-G. .. B655
Manufacture of thin sheets of ——. (P) McQuitty, and Nelson, Dale and Co. .. B919
New method of drying ——. Stadlinger .. B684
Non-amino nitrogen of ——. Knaggs and Schryver .. B956
Osmotic pressure of —— in solutions of sodium salicylate. Horne .. B956
Peptisation of —— by mixed liquids. Mardles .. B344
Points of minimum swelling of ash-free ——. Wilson and Kern B142
Purification of ——. (P) Köln-Rottweil A.-G. .. B759
Purification of —— by flocculation in an electric field. Knaggs and Schryver .. B955
purified by flocculation in an electric field; Properties of ——. Manning .. B955
Reactions of —— in tanning. Moeller .. B304
Relation between hydrolytic degradation, viscosity, jelly-strength, and adhesive power of ——. Gerngross .. B142
Separation of products of hydrolysis of —— by the carbamate method. Kingston and Schryver .. B955
sol; Dehydration of —— by tannic acid, crystalline tannins, and simpler phenols. De Jong .. B225
sols; Density and hydration of ——. Svedberg and Stein .. B26
solutions; Conductivity titration of —— with acids. Hitchcock B66
solutions; Surface tension of ——. Davis and others .. B393
Titration curve of ——. Atkin and Douglas .. B684
Unresolved factors in determination of jelly strength of ——. Sheppard and Sweet .. B644
Use of —— in glaze application. Gerber .. B713
Value of —— as an adhesive. Horst .. B529

Gelatin-sulphuric acid. Hatano .. B344

Gelatinisation; Kinetics of —— and its general significance. Rieger B881

Gels; Continuously-acting washing apparatus for purification of colloidal ——. De Jong .. B2
Manufacture of ——. (P) Silica Gel Corp., and Patrick .. B379

Gems; Preparation of synthetic ——:
(P) Ruff .. B747
(P) Schlumberger .. B467, B596

Genge. *See Astralagus sinicus.*

Gentian Violet. *See under* Triphenylmethane dyestuffs.

Gentiobiose; Identity of —— with amygdalin-biose. Haworth and Wylam .. B190

Geraniol; Oxidation of —— in stages. Kotz and Steche .. B576

Germanium; Extraction of gallium and —— from germanite. Thomas and Pugh .. B560
in smithsonite and mine waters. Müller .. B636

Germany; Importance of a supply of artificial fertilisers, especially phosphatic fertilisers, for ——. Lemmermann .. B269

Germicidal products; Manufacture of ——. (P) Koholyt A.-G. B845
values of Australian essential oils (exclusive of eucalyptus oils) and their constituents, also of some synthetic products. Penfold and Grant .. B923

Germicides. (P) Akt.-Ges. für Anilin-Fabr. .. B728

Gland-extracts; Stable preparations from —— suitable for internal use. (P) Wlutsch .. B812
substances; Preparation of —— for oral administration for therapeutic purposes. (P) Norrie and others .. B200

Glands; Obtaining hormones from internally secreting ——. (P) Stern and Battelli .. B889

Glass; Action of potassium carbonate on lead ——. Coad-Pryor 27T, B944
Annealing —— and apparatus used therein. (P) Twyman, and Hilger, Ltd. .. B749*
-annealing lehr. (P) Dixon, and Dixon Co. .. B748
-annealing lehrs; Plate ——. (P) Dixon Co. .. B134
-annealing tunnels or arches. (P) Soc. des Verreries de Folembray .. B96
Apparatus for drawing sheets from a body of molten ——. (P) Pilkington Bros., and Railton .. B713*
Apparatus for feeding molten ——. (P) Rankin .. B713*
articles; Heat treatment of ——. (P) Littleton, jun., and Corning Glass Works .. B205*
articles; Skiographic study of ——. Spencer and Badger .. B174
charges; Feeding of ——. (P) Owens Bottle Co. .. B749*
Composition for producing ——. (P) D'Adrian .. B468
Controlling the temperature of molten glass in manufacture of sheet —— by vertical drawing. (P) Soc. Anon. Brevets Fourcault .. B57
Correlation between crack development in glass whilst conducting electricity and the chemical composition of the ——. Schumacher .. B830
Decay of window —— from the standpoint of lichenous growths. Mellor .. B909
Determination of selenium in ——. Cousen .. B217
Devices for hermetically sealing metal to —— or for sealing glass vessels. (P) N. V. Philips' Gloeilampenfabr. .. B134
Drawing —— in sheet form. (P) Rowart .. B598*
Effect of composition on viscosity of ——. English .. B909
Effects produced by chilling ——. Tool and Eichlin .. B468

PAGE

Glass—*continued.*
Electrical conductivity of sodium chloride in molten ——. Sutton and Silverman .. B380
Electrolysis of soda-lime ——. Evolution of gas and its relation to sorption and conductivity. Rebbeck and Ferguson .. B944
Feeding charges of molten ——. (P) Peiler, and Hartford-Empire Co. .. B58*
Feeding molten ——. (P) Miller .. B634*
furnaces; Use of wood in gas producers for heating ——. Saxton .. B174
heat-insulating articles; Manufacture of ——. (P) Delany .. B982
-house pots; Glass-pot clays and the manufacture, use, and treatment of ——. Marson .. B380
Influence of alumina on properties of ——. Dimbleby and others .. B909
Influence of titania on properties of ——. Sheen and Turner .. B909
or like containers; Means for closing or sealing ——, especially adapted for transport of chemicals. (P) Shores and others B895
-making apparatus. (P) Smith .. B748
-making materials; Production of —— from silicates. (P) Frink .. B749*
-making salts; Production of alumina and ——. (P) Frink .. B596
manufacture; Devitrification phenomena which occur in ——. Knoblauch .. B558
Manufacture of —— with low coefficient of thermal expansion:
(P) Kraus .. B1013
(P) Locke .. B1013
Manufacture of raw plate ——. (P) Rlechers .. B295*
Manufacture of sheet ——:
(P) Gelstharp, and Pittsburgh Plate Glass Co. B58*, B468, B468
(P) Huard .. B598
Manufacture of splinterless and reinforced ——. (P) Cox .. B982
Means for delivering —— from a glass furnace. (P) McNish .. B598*
Means for stirring ——. (P) Parsons .. B134*
Melting ——. (P) Libbey Glass Co. .. B748
-melting furnaces; Behaviour of refractories in ——. Insley B910
melting; New method of ——. Ferguson .. B217
Melting —— in pots, and furnace therefor. (P) Troutman and Christie .. B96
melts; Tempering cooling strains in ——. (P) Schütz .. B423
to metal joint. Ridyard .. B359
Microscopical identification of stones in ——. Insley .. B218
objects; Hardened ——. (P) Schott und Gen. .. B423
Ophthalmic ——. Montgomery .. B57
Physical properties of ——. Eckert .. B335
plates; Means for pushing —— through lehrs. (P) Dixon Co. B423*
pot furnaces. (P) Travers and Clark, Ltd., and others .. B514
pots; Effect of various sizes of grog particles on clay ——. Williams .. B57
Process of and mixture for making ——. (P) D'Adrian .. B423
Production of colourless —— in tank furnaces, with special reference to use of selenium. Cousen and Turner .. B218
Production of a continuous strip of ——. (P) Avery and others B134*
refining apparatus used in connexion with incandescence electric lamps and other similar apparatus. (P) Vello .. B822
Regulation of temperature conditions in a body of molten ——. (P) Danner .. B911*
sheets or plates; Machinery for producing ——. (P) Chance Bros. and Co., and Forster .. B58*
sheets; Tanks for making ——. (P) Michotte .. B382
Surface tension of ——. Lecrenier .. B633
surfaces; Behaviour of gases in contact with ——. Bangham and Burt .. B468
tank; Devitrification in a lime-flint ——. Payne .. B512
Thermal endurance of ——:
Stott .. B672
Stott and Irvine .. B672
Transferring molten glass to casting or rolling table in manufacture of high-grade plate ——. (P) Riechers and Michaelis .. B598*
Unbreakable ——. Berger .. B422
U. S. Government specification for flat —— for glazing purposes .. B747
Use of filter-plates made of sintered —— in the chemical laboratory. Hüttig .. B235
ware; Apparatus for annealing ——:
(P) Mulholland, and Hartford-Empire Co. .. B830*
(P) Gilver and others .. B634*
"Glass-granite"; Manufacture of ——. (P) Jeckel, Mijnssen & Co. .. B598
Glasses; Absorption spectra of coloured ——. Fedotieff and Lebedeff .. B597
Coloured ——. Granger .. B870
Electrical conductivity and transition points of ——. Schönborn .. B513
Electromotive characteristics of ——. Schiller .. B559
Hydration of natural and artificial ——. Schott and Linck B422
Manufacture of readily fusible ——. (P) Patent Treuhand Ges. für Elektrische Glühlampen, and General Electric Co. .. B1013
Method of studying attack of molten —— upon refractory materials. Rose .. B174
Opaque and coloured —— and ceramic glazes of the same nature. Granger .. B218
Physical properties of silicate —— and their possible bearing on the history of igneous rocks. Turner .. B980
Glauconite; Improving the base-exchanging properties of ——. (P) Spencer, and Permutit Co. .. B614
Stabilised —— for water softening. (P) Nordell, and Wayne Tank and Pump Co. .. B886
Glazes: Apparatus for measuring abrasive hardness of ——. Scott .. B514

PAGE

Glazes—*continued.*
Aventurine ——. Parmelee and Lathrop .. B675
Effect of uranium in various tyes of ——. Mathiasen .. B675
Manufacture of ceramic ——. (P) Ges. für Tuff- und Ton-Technik .. B830
obtained on clays with varying contents of silica, alumina, and iron oxide; Influence of different salt-glazing temperatures upon the colour and gloss of ——. Schurecht .. B673
Opaque and coloured glasses and ceramic —— of the same nature. Granger .. B218
Porcelain —— maturing at high temperatures. Twells, jun. B57
produced at different temperatures; Influence of varying lime content in clays on properties of salt ——. Schurecht B672
Production of figured —— on metals, porcelain, glass, and the like. (P) Traube .. B749
Use of gelatin in application of ——. Gerber .. B713
Glazing and decorating ceramic wares. (P) Dressler, and American Dressler Tunnel Kilns, Inc. .. B335
pottery, porcelain, earthenware, and other porous mineral materials. (P) Potter and others .. B58
Gleditsia triacanthos beans; Chemical and structural study of ——. Walton .. B195
Glover towers; Acid distributor for ——. (P) Patten, and Davison Chemical Co. .. B908
Glucinum. *See* Beryllium.
Glucokinin; Growth of maize seedlings as affected by ——. Eyster and Ellis .. B882
Gluconic acid; Production of —— by thread fungi. Falck and Kapur .. B649
β-Glucosan; Action of hydrogen peroxide and hypochlorous acid on ——. Craik .. 173T
Yield of —— from low-pressure distillation of cellulose. Venn .. B782
Glucose; Action of 5N nitric acid on ——. Tropsch and Schellenberg .. B323
from α- and β-glucosides. Colin and Chaudun .. B312
See also Dextrose.
Glucoside of *Bulbus scillæ*; Manufacture of the cardiac ——. (P) Chem. Fabr. Sandoz .. B692, B997
of methyl salicylate present in the fresh bark of *Betula lenta*; True nature of the ——. Bridel .. B924
Glucosides; Glucose from α- and β- ——. Colin and Chaudun B312
Synthetic nitrophenol ——. Glaser and Walwek .. B614
Glue; Breaking strength of —— and its relation to the water content. Neumann .. B143
composition; Tannin and vegetable ——. (P) Birk .. B529
Determination of sizing colloids in ——. Kirchhoff .. B106
Electro-osmotic purification of ——. (P) Elektro-Osmose A.-G. .. B759
Evaluation of ——. Sauer .. B65
Examination of liquid ——. Tressler .. B919
and gelatin. Bechhold and Neumann .. B759
and the like; Cooling and drying ——. (P) Hoffmans .. B482
or the like; Preparation of sizing ——. (P) Leonhardt .. B920
Manufacture of ——. (P) Stern .. B842
Manufacture of —— and of bone-black. (P) Beyersdorfer, and Zuckerfabr. Frankenthal .. B1021
Manufacture of casein ——. (P) Dance, and New Zealand Co-operative Dairy Co. .. B143*
manufacture; Method of hydrolysis in ——. (P) Lloyd .. B841
Manufacture of vegetable ——. (P) Kreismann .. B529
New method of drying ——. Stadlinger .. B684
Obtaining grease and —— from bones. (P) Löb .. B529
Relation between hydrolytic degradation, viscosity, jelly-strength, and adhesive power of ——. Gerngross .. B142
from seaweed. Blasweiler .. B881
Standard methods for determining viscosity and jelly-strength of ——. De Beukelaer and others .. B303
Treating waste leather for manufacture of ——. (P) Kraus B304
Water-resistant ——. (P) Lindauer and Hunt .. B920
Glutathione; Catalytic action of traces of iron on ——. Harrison B963
Gluten quality. Kress .. B993
washing problem. Dill and Alsberg .. B993
of wheat; Effect of inert matter on properties of ——. Gerum and Metzer .. B570
Glycerides; Mixed ——. Armstrong and Allan .. 209T
Glycerin; Dehydration of alcohol by means of ——. Knecht and Muller .. 177T, B486
Determination of boiling point of ——. Von Mayer-Bugström B877
Electro-osmotic purification of ——. (P) Elektro-Osmose A.-G. .. B755
Manufacture of alkali soaps and ——. (P) Schmidt .. B102*
Recovery of —— from fermentation mixtures. (P) Willkie, and U.S. Industrial Alcohol Co. .. B69
substitutes. (P) Badische Anilin u. Soda Fabrik .. B927
See also Gycerol.
Glycerol; Bichromate method for determination of ——. Bennett B1019
Determination of —— in fats, oils, etc. Strebinger and Streit .. B640
Determination of —— in wine. Marchi .. B110
as disturbing factor in testing for methyl alcohol in ethyl alcohol. La Wall .. B438
Manufacture of —— from sugar by fermentation. (P) Connstein and Lüdecke .. B959*
solutions; Evaporation rate of ——. Bagster .. 63T
Synthesis of ——. (P) Essex and others .. B200
See also Glycerin.
Glycerophosphatase; Occurrence of —— in taka-diastase. Akamatsu .. B28

PAGE

Glyceryl oleostearate; Manufacture of ——. (P) Walton, and Tokalou, Ltd. .. B719
Glycidic esters; Reduction of —— in the terpene series. Synthesis of inactive citronellol and rhodinol. Verley .. B615
Glycogen; Constitution of ——. Pringsheim and others .. B921
Glycol ethers of aromatic nitrohydroxy compounds; Preparation of —— (P) Matter .. B402
Glycol nitrates; Manufacture of ——. (P) Chem. Fabr. Kalk, and Oehme .. B316
Preparation of —— from nitration products of gaseous unsaturated hydrocarbons. (P) Chem. Fabr. Kalk, and others .. B452
Glycolchlorhydrin and homologues; Use of —— as solvents for resins, siccatives, colours, turpentine, tar oils, perfumes, and other organic substances. (P) Badische Anilin und Soda Fabr. .. B682
Glycollide; Preparation of ——. (P) Deutsche Gold- u. Silber-Scheide-Anstalt .. B401
Glycosine; Manufacture of dyestuffs from ——. (P) Lehmstedt B902
Glycyrrhizin; Preparation of commercial ——. Bertolo .. B151
Goat skin. *See under* Skin.
Gold-chromium alloys. Vogel and Trilling .. B60
colloidal; Oxide content of ——:
Pauli .. B889
Thelsen .. B889
concentrates; Use of oxidisers in cyanide treatment of ——. Watson .. B98
crystals; Preparation of ——. Adam .. B716
Determination of mercury, palladium, and ——, and separation of these metals from other metals. Moser and Niessner .. B202
Extraction of ——. (P) Hanclau .. B522
group metals; Improving ——. (P) Ehrhardt .. B793
leaf; Manufacture of ——. (P) Leighton and Demel .. B388
Micro-electrolytic determination of ——. Fuchs .. B236
particles in Witwatersrand banket ore; Size of —— and their rate of solution in cyanide. Graham and Wartenweiler .. B790
Partition of —— between two different liquid metallic phases. Tammann and Schafmeister .. B873
Precipitation of —— from cyanide solution. (P) Hirschkind, and International Precipitation Co. .. B181
Precipitation process for ——. Steigmann .. B98
Preparation of sulphur-containing ores for extraction of silver and ——. (P) Soc. Metalurgica Chilena "Cuprum" B429
Gooch crucibles; Permanent filter mats in ——. Sweeney and Quam .. B495
Gotil seeds; Medicinal value of fatty oil of ——. .. B342
Gossypol content of cottonseed; Relation between —— and its toxicity. Schwartze and Alsberg .. B885
Quantitative variation of —— and its relation to oil content of cotton seed. Schwartze and Alsberg .. B22
Grading of materials; Hydraulic ——. (P) Arpin .. B544*
materials; Screen separators for ——. (P) Sturtevant, and Sturtevant Mill Co. .. B160*
separation, and washing of solid materials. (P) Maison Beer, and Charlier .. B281
solid materials; Apparatus for ——. (P) Pinoche and Radelet .. B544*
Grain; Apparatus for conditioning ——. (P) Nield .. B565, B719*
Chemical analysis as a means of determining degree of alteration in ——. Zak .. B187
Determination of phosphoric acid, calcium, magnesium, and potassium in ——. Gilmour .. B651
Examination of yield of dressed —— from Hoos Field over a period of 70 years. Mackenzie .. B882
hulls and other fibrous materials; Effect of sodium hydroxide on composition, digestibility, and feeding value of ——. Archibald .. B611
Grain size of saline sludges. Kayser .. B906
Grains; Behaviour of different raw —— during their solution and saccharification by diastase. Windisch .. B145
Influence of irrigation water on composition of ——. Greaves and Carter .. B269
Granite; Weathering of ——. Blanck and Peterson .. B436
Granular materials; Particle size of ——. Houwink .. B455
Grape sugar. *See* Dextrose.
Grapes; Anthocyanin in Clinton ——. Anderson and Nabenhauer B824
Anthocyans in Norton and Concord ——. Anderson .. B86
Anthocyans of Siebel ——. Anderson .. B1007
Graphite; Action of heat and vacuum on artificial ——. Lebeau and Picon .. B1001
Crystal structure of ——. Hassel and Mark .. B828
Density of ——. Ryschkewitsch and Köstermann .. B632
Electrical conductivity of ——. Ryschkewitsch .. B61
electrodes; Increasing the life of ——. (P) Koholyt A.-G. B951
Manufacture of electrodes from natural ——. (P) Ridoni, and Soc. Talco e Grafiti val Chisone .. B638, B986
as a metallic modification of carbon. Ryschkewitsch .. B293
Optical properties of ——. Gaubert .. B55
ores; Concentration of ——. (P) Spearman .. B558
Purification of ——. (P) Langheinrich, and Graphitwerk Kropfmühl A.-G. .. B830*
Variation in electrical resistance of —— with temperature. Noyes, jun. .. B876
Graphitic carbon; Specific heat of ——. Schläpfer and Debrunner B240
Graphitic oxide; Optical properties of ——. Gaubert .. B55
Graphititis of iron pipes. Binaghi .. B177

PAGE

Grasses; Nutritive value of —— as shown by their chemical composition. Fagan and Jones .. B651
Greasing agents for textile fibres. (P) Spiess .. B128
Green scales. *See* Ferrous ammonium citrate.
Greenawalt electrolytic copper extraction process. Greenawalt .. B258
Greenhouses; Influence of plants on the air in ——. Rigg and others B722
Grignard reaction; Preparation of magnesium methyl chloride for the ——. Schmalfuss .. B805
Grinding grain, coal, bricks, and the like; Disintegrators for ——. (P) Harrison Carter, Ltd., and others .. B81
hard and soft substances. (P) Krupp A.-G. Grusonwerk .. B158
and like mills; Drawing powder from —— by a current of air. (P) Crosbie .. B498*
mill; Inexpensive laboratory ——. Dutcher and Laudig .. B237
mills:
(P) Allen and Co., and Coles .. B583
(P) Cole and Bergman .. B158
(P) Davies .. B2
(P) Fowler and Cory .. B41
(P) Moyle .. B158
(P) Portas .. B2
(P) Reynolds and others .. B455
(P) Seaman, and Brinjes and Goodwin, Ltd. .. B238
mills; Driving gear of roller ——. (P) Marchant, and Marchant Bros. .. B584*
and other machinery; Adjusting device for rolls of ——. (P) Torrance and others .. B699*
paints, colours, and pigments; Mills for ——. (P) Torrance .. B238
Researches on theory of fine ——. Blyth and others .. B657
solids, such as coal, pitch and the like; Film mills for ——. (P) Harrison Carter, Ltd., and others .. B497
See also Pulverising.
Gröndal-Franz-derEkof flotation process applied to treatment of middlings from copper pyrites ore. Treptow .. B178
Grosvenor humidity chart; Modification of the ——. Greenfield 9T, B157
Groundnut oil. *See* Arachis oil *under* Oils, Fatty.
Growth-catalysts; Water- and fat-soluble ——. Von Euler .. B309
promoting influence of irradiated air; Supposed ——. Webster and Hill .. B533
promoting substances for plants; Formation of —— by microorganisms. Mockeridge .. B1023
Guaiacol; Applicability of —— for measuring the activity of oxydase preparations. Fleury .. B610
preparations in aqueous solution; Preparation of stable ——. (P) Rex Chem. Fabr. u. Drogen Grosshandels A.-G. .. B616
Guanidines; Reactions of certain —— with sulphur. Bruni and Levi .. B113
Guanidinium salts; Preparation of —— from calcium cyanamide. Blair and Braham .. B806
Guanosine; Presence of —— in the green leaves and berries of the coffee tree (*Coffea arabica*) and its relation to the origin of caffeine in this plant. Camargo .. B312
Guanylurea sulphate; Action of —— on plant growth. McGuinn .. B760
Guignet's green; Manufacture of ——. (P) Wöhler .. B987
Guinea Green B. *See under* Triarylmethane dyestuffs.
Gum accroides. Gardner and Parks .. B391
cherry-tree; Digestion of —— by organisms and enzymes *in vitro*. Voskressensky .. B568
Ester ——. *See under* Resins.
levan. *See under* Levan.
Red ——. *See* Gum accroides.
Gums; Manufacture and application of aqueous solutions of difficultly soluble ——. (P) Soc. Ital. De Angeli, and Paulus .. B1024
Guncotton; Centrifuges for removing alcohol from ——. (P) Gebr. Heine .. B403
Gun-metal; Influence of casting temperature and mass on physical properties of Admiralty ——. Rowe .. B834
Gutta-percha and analogous vegetable resins; Manufacture of ——. (P) Hauser, and K. D. P., Ltd. .. B1020
Manufacture of ——. (P) Stutchbury, and K.D.P., Ltd. .. B918
Manufacture of imitation ——. (P) Exportingenieure für Papier und Zellstofftechnik .. B105
Production of aqueous dispersions of ——. (P) Pratt .. B757
substitute. (P) Snelling .. B225
Gypsophila paniculata; Saponin from ——. Kofler and Dafert .. B73
Gyposphila-sapogenin. Karrer and others .. B887
Gypsum; Apparatus for separation of —— in evaporation of brine. (P) Maschinenbau-A.-G. Balcke .. B788
cement surfaces; Treatment of ——. (P) Gallinowsky and Heltkamp .. B336
Dehydration and re-hydration of ——. Linck and Jung .. B870
Effects of accelerators and retarders on calcined ——. Welch .. B58
Energy of crystallisation of ignited ——. Von Glasenapp .. B219
plaster; Preventing efflorescence on ——. Welch .. B830
and products therefrom: Analysis of ——. Welch .. B377
See also Calcium sulphate.

H

H-acid. *See* 1.8.3.6-Aminonaphtholdisulphonic acid.
Hæmatic acid; Synthesis of ——. Küster and Maurer .. B151
Hæmin charcoal; Catalytic activity of ——. Warburg and Brefeld B237
Hæmoglobin; Preparation of ——. Ferry .. B74
Hafnium; Separating zirconium and ——. (P) N. V. Philips' Gloeilampenfabr. .. B869

Heat—*continued.*
Production of ——. (P) O'Neill .. B1000
Protecting bodies affected by ——, by means of substances which undergo chemical change with absorption of heat. (P) Lodemann .. B119
radiators; Incandescence mantles for use as ——. (P) Terrell, jun., and Monarch Mantles, Ltd. .. B665
transference in enamel-lined apparatus. Poste .. B541
transference in small copper and steel pipes. Blake and Peters, jun. .. B773
transference in steam-jacketed evaporators. Olin and others .. B735
transferring apparatus and method. (P) Field .. B282
transmission from bare and insulated pipes. Heilman .. B541
treatment of materials by means of molten metal; Apparatus for ——. (P) Thermal Industrial and Chemical (T.I.C.) Research Co., and Rider .. B735
treatment by means of molten metal; Removal of matter from surface of a liquid, particularly in working apparatus for ——. (P) Thermal Industrial and Chemical (T.I.C.) Research Co., and Duckham .. B543
Heaters; Characteristics of air blast ——. Ellis and White .. B541
for elastic fluids. (P) Kirke .. B737*
Heating apparatus. (P) Simon and Simon .. B3
electrically in a vacuum to a high temperature; Apparatus for ——. Lebeau and Picon .. B476
liquids by introduction into molten metal. (P) Thermal Industrial and Chemical (T.I.C.) Research Co., and others .. B735
materials; Method and apparatus for ——. (P) Woodall, Duckham and Jones (1920), Ltd., and Duckham .. B3
method and apparatus; Continuous ——. (P) Dressler, and American Dressler Tunnel Kilns, Inc. .. B469
solid shapes; Charts for estimating temperature distribution in ——. Gurney and Lurie .. B39
substances at high temperatures and subsequently cooling; Apparatus for ——. (P) Greenwood, and Carr and Co. .. B737*
system; Application of closed calorific —— to distillation in the chemical industry. Marilier .. B773
Heliotropin; Preparation of —— from isosafrole. Nagai .. B888
Hemicellulose; Determination of —— in apple wood. Tottingham and Gerhardt .. B240
Hemicelluloses. Cellobiase and lichenase. Pringsheim and Leibowitz .. B147
Lichenin and lichenase. Pringsheim and Kusenack .. B760
Hemp; Differences in dyeing properties of cotton, flax, and ——. Bartunek .. B375, B593
fibres; Utilisation of cottonised —— for production of cuprammonium cellulose solutions. (P) Krais and Waentig B290
Production of fine lustrous ——. (P) Krais .. B290
Hempel pipette; Modified ——. Heftor .. B452
Heparin; Iron compound of ——. Grüning .. B766
Heptane; Solubility of —— in water. Milligan .. B818
Herbert pendulum hardness tester. Benedicks and Christiansen .. B836
Herrings; Bleaching pickled —— with hydrogen peroxide. Lüning .. B994
Hevea latex and rubber. *See under* Rubber.
β-Hexa-amylose; Molecular structure of ——. Irvine and others B531
Hexadecane; Pyrogenic dissociation of ——. Gault and Hessel .. B700
Hexahexosan obtained from starch. Pictet and Stricker .. B957
Hexahydrodiphenylene oxide; Preparation of ——. (P) Riedel .. B654
Hexametaphosphates. Pascal .. B92
Hexamethylenetetramine derivatives; Preparation of ——:
(P) Bunge and Matter .. B314
(P) Gehe und Co., and Runne .. B617, B849
(P) Wolffenstein .. B356
Influence of —— on the haricot bean. Nicolas and Nicolas .. B27
Manufacture of ——:
(P) Carter and others .. B808
(P) Holzverkohlungs-Ind. A.-G. .. B654
Preparation of a therapeutically valuable compound of ——. (P) Sonnenfeld and others .. B655*
n-Hexane; Action of bromine on ——. Blair and others .. 289T, B807
Action of ozone on ——. Blair and others .. 287T, B807
Purification of ——. Castille and Henri .. B576
Solubility of —— in water. Milligan .. B818
Hexone bases from proteins; Action of nitrous acid on ——. Plimmer .. B349
Hexosemonophosphatase of taka-diastase. Noguchi .. B109
Hide as an adsorbent. Adsorption of ferric and aluminium chlorides by hide powder. Kubelka and others .. B225, B918
powder; Relation between swelling and hydrolysis of ——. Moeller .. B481
powder; Titration curve of ——. Atkin and Campos .. B841
substance; Influence of neutral salts on fixation of tannin by ——. Thomas and Kelly .. B142
Temperature at which —— shrinks. Powarnin and Aggeew .. B759
Hides; Bacteriology of soaking of ——. McLaughlin and Rockwell .. B757
Histology of animal ——. Interfibrillary tissue. Küntzel .. B758
and the like; Soaking liquors for ——. (P) Lloyd and others B919
and the like; Treatment of ——. (P) Le Petit and others .. B644
Preparation of —— for tanning, also for disinfection and preliminary tannage. (P) Dufour-Lepetit A.-G., and Gansser .. B644
Preparations for bating ——. (P) Jucker und Co. .. B919
Radioactive ——. (P) Tapparelli .. B481
Soaking and liming ——. (P) Jucker und Co. .. B482
See also Skins.

PAGE
Histidine; Determination of —— by bromination. Plimmer and Phillips B532
Relation of —— to growth. Rose and Cox B1026

α-Homoheliotropin; Preparation of —— from safrole. Nagai .. B888

Honey, artificial; Determination of dry matter in ——. Auerbach and Borries B567
artificial; Repeated use of invertase for inversion of sucrose in preparation of ——. Schmidt B108
Detection of invert sugar in ——. Sherwood B648
Distinguishing between genuine and artificial ——. Auerbach and Bodländer B567
Invertase in ——. Nelson and Cohn B843

Honey locust beans; Chemical and structural study of ——. Walton B195
Hoos Field; Examination of yield of dressed grain from —— over a period of 70 years. Mackenzie B882
Hops; Complete utilisation of —— for brewing purposes. (P) Von Horst B993
Deterioration of —— during storage. Heron B145
Influence of reaction of medium on antiseptic properties of ——. Fernbach and Stoleru B761
Investigations on ——. Report on manuring experiments, 1923. Burgess B956
Investigations on ——. Work at the experimental oast, 1923. Burgess B958
Preservative principles of ——. Constitution of lupulon. Walker B958
Valuation of —— for antiseptic properties. Ford and Tait .. B568
Hormones; Obtaining —— from internally secreting glands. (P) Stern and Battelli B889
Horn; Swelling and elasticity of normal and swollen ——. Hauer B988
Horse-chestnuts; Simultaneous production of starch, oil, protein, and saponin from ——. (P) Wischin B651
Treatment of —— for spirit manufacture. (P) "Bom" Fabrikshof u. Landwirtschaftl. A.-G. B993
Horsehair, artificial; Manufacture of ——. (P) Dreyfus B251
Products of catalytic hydrolysis of ——. Ssadikov B168
Hübl's iodine solution; Function of mercuric chloride in ——. Margosches and Hiuner B640
Humalic acid; Production of salts of —— from peat-forming plants. (P) Brat B537
Humic acid; Absorption of potash by ——. Charriou B920
Preparation of a decomposition product of —— from peat. (P) Dyckerhoff B769

Humic acids; Action of nitric acid on ——. Tropsch and Schellenberg B323
acids; Action of 5N nitric acid on natural —— and on humic acids prepared from sugar and quinol. Tropsch and Schellenberg B323
acids; Action of various reagents on ——. Tropsch and Schellenberg B323
acids; Dry distillation of —— and of the products obtained by treating them with alkali. Tropsch and Schellenberg B324
acids; Effects of fusion and heating under pressure of —— in presence of alkali. Tropsch and Schellenberg B323
acids; Preparation of —— from coal. Tropsch and Schellenberg B323
Humidity chart; Modification of the Grosvenor ——. Greenfield 9T, B157
Humin formed by acid hydrolysis of proteins. Condensation of indole derivatives with aldehydes. Burr and Gortner .. B574
Humus; Behaviour of sols of ferric hydroxide, manganese dioxide, and —— towards carbonate, bicarbonate, and clay. Udluft B595
Hydantoin derivatives; Hypnotic action of ——. Lumière and Perrin B846
Hydrangea Thunbergii, Sieb.; Phyllodulcin, a sweet principle of leaves of ——. Maniwa B729

Hydrates; Discontinuity in dehydration of salt ——. Crowther and Coutts B828
and hydrogels. Hydrated aluminium oxides poor in water. Willstätter and Kraut B254
and hydrogels. Hydroxides and their hydrates in the different aluminium hydroxide gels. Willstätter and Kraut B745
and hydrogels. Simplest stannic acids. Willstätter and others B907
Hydrazine derivative of diacetoneglucose; Preparation of a ——. (P) Merck B449
derivatives; Effect of —— in producing anhydraemia and experimental anaemia. Bodansky B535
and its derivatives; Volumetric determination of ——. Kurtenacker and Kubina B888
Manufacture of ——. (P) Joyner, and Du Pont de Nemours and Co. B200*
Oxidation of ——, and effect of oxygen on its decomposition in alkaline solutions. Cuy and Bray B828
Oxidation of —— by permanganate. Kolthoff B866
Reactions of —— with ferricyanide in alkaline solution, and with bichromate in acid solution. Cuy and Bray .. B828
and its sulphonic acids; Oxidation of ——. Raschig .. B786
Volumetric analysis of —— by the iodic acid, iodine, bromine, and hypochlorous acid oxidation methods. Bray and Cuy B491
Volumetric determination of —— by the iodine, bromate, iodate, and permanganate methods. Kolthoff B941
Hydroaromatic compounds; Manufacture of highly chlorinated derivatives of ——. (P) Durand et Huguenin B10

PAGE
Hydrobenzoin and its alkylated homologues; Hypnotic properties of ——. Tiffeneau and Torres B197

Hydrocaoutchouc. Pummerer and Koch B798
Homologues of ——. Staudinger and Widmer B954

Hydrocarbon-containing materials; Apparatus for treating ——. (P) Bowie and Gavin B209
gases; Production of acid extract and alcohols from ——. (P) Ellis and others B402
liquids; Transforming —— into liquids of lower boiling point. (P) Auld B165
oils. *See* Oils, Hydrocarbon.
from shark liver oils; Saturated ——. Toyama B224
spirit; Purification of cracked ——. (P) Remfry B0

Hydrocarbons; Action of iodine on ——. Nellensteyn B285
Action of ozone on ——, with special reference to production of formaldehyde. Action of ozone on n-hexane. Blair and others 287T, B807
Action of sulphur on ——. Bleienberg B777
Apparatus for condensing and fractionating ——. (P) Owen B821
Apparatus for converting heavy —— into lighter hydrocarbons. (P) Muehl, and Interstate Refineries, Inc. B460, B460
Apparatus for cracking —— and recovering gasoline. (P) Kotzebue and Bowman B366
Apparatus for distilling ——. (P) Thompson B84
aromatic; Degradation of ——. (P) Houlehan, and Du Pont de Nemours and Co. B166
aromatic; Electrochemical oxidation of ——. Fichter .. B430
aromatic; Interaction of —— with nitrogen peroxide. Bass and Johnson B312
aromatic; Production of hydrogenated —— and of their substitution products. (P) Akt.-Ges. für Anilin-Fabr. B578

Catalytic decomposition of hexahydro-aromatic and saturated aliphatic ——. Cracking of petroleum. Grignard and Stratford B661
Continuous treatment of —— by hydrogenation or distillation under pressure. (P) Erdöl und Kohle-Verwertung A.-G., and Deho B410
Continuous vaporisation of mixtures containing ——. (P) "Metan" Spolka z. Ograniczona Odp. B411
Converting heavy —— into lower-boiling products. (P) Thiele and Cordes B85
Converting unsaponifiable —— into fatty acids and other saponifiable products. (P) "Kliva" Ges. B102
Cracking ——:
(P) Riddick B626
(P) Wellman, and Kansas City Gasoline Co. .. B166
Cracking or decomposition of materials containing or yielding ——. (P) Melamid B1006
and their derivatives; Halogenation of ——. (P) Tizard and others B577
Determination of condensable —— in coal gas by solid adsorbents. Green and Maw B660
Determination of unsaturated olefinic, aromatic, and saturated —— in petroleum and tar fractions. Danaila and others B857
Distillation and depolymerisation of liquefiable ——. (P) Seigle B459
Evolution of —— from fuel. (P) Wisner, and Carbocite Co. B548
Formation of alcohols and —— by catalytic hydrogenation of aromatic and aliphatic-aromatic carbonyl compounds. Straus and Grindel B925
Hydrogenating gas for decomposing ——. (P) Bergius .. B664
Manufacture of lower-boiling —— from high-boiling hydrocarbons:
(P) McAfee, and Gulf Refining Co. B85
(P) U.S. Gasoline Manuf. Corp. B84
Obtaining valuable —— from materials of inferior value. (P) Linnmann B778
Oxidation of saturated —— by ozone. Koetschau and Flemming B210
Oxidation of —— with special reference to production of formaldehyde. Slow oxidation of higher liquid saturated hydrocarbons. Wheeler and Blair B75
Paraffin ——. *See under* Paraffin.
Preparation of alcohols and aldehydes from ——. (P) Kloppenburg, and N. V. de Bataafsche Petroleum Maatschappij B808
Pressure distillation of heavy ——. (P) Black B1006
Production of —— of relatively low boiling point. (P) Chemical Research Synd. B210*
Purification of ——:
(P) Demoulins and Garner B665
(P) Gould, and Barrett Co. B328
Purifying and hydrogenating heavy ——. (P) Internationale Bergin Co., and Hofsäss B503
Purifying light ——. (P) Smith and others B1005
Pyrogenic decomposition of acyclic ——. Gault and others .. B500
Recovery of —— of low boiling point from gases containing them. (P) Allgem. Vergasungs-Ges. B411
Refining ——:
(P) Burke and Burke B410
(P) Hütz B366, B589
(P) V. L. Oil Processes, Ltd., and others B1006
Separation of saturated and unsaturated ——. (P) Lenher .. B47
Separation of volatile —— from gas mixtures. (P) Allgem. Vergasungs-Ges. B502
Treatment of ——:
(P) Dubbs, and Universal Oil Products Co. B327
(P) Egloff B166
(P) Gartlan and Gooderham B327

Hydrosulphurous acid; Production and use of ——. (P) Worsley B746
Hydroxides; Adsorptive power of metal ——. Von Euler and Nilsson .. B15
Determination and separation of soluble carbonates, salts of sulphur acids, and —— and of elementary sulphur. Järvinen .. B509
Manufacture of alkali ——. (P) Wipfler .. B256
Manufacture of alkali —— and of gas. (P) Reid and Hogan B16
Sorptive power of metal —— for invertase. Von Euler and Nilsson .. B609
X-ray examination of aged metal ——. Fricke and Wever B710
Hydroxy compounds; Manufacture of condensation products containing sulphur from aromatic ——. (P) Meister, Lucius, u. Brüning .. B800
Hydroxyaldehydes; Simplification of Gattermann synthesis of ——. Adams and Levine .. B100
Hydroxyalkyl ethers; Production of derivatives of basic ——. (P) Bayer und Co. .. B967
Hydroxamines; Separation and purification of ——. (P) Bergmann .. B449
Hydroxyanthraquinones; Action of thionyl chloride on ——. Green .. B824
Chlorination of ——. (P) Thomas, and Scottish Dyes, Ltd. B211
Reduction products of the ——:
Goodall and Perkin .. B368
Haller and Perkin .. B246
Hydroxyanthranilic acids: Preparation of derivatives of ——. (P) Meister, Lucius, u. Brüning .. B863
Hydroxybenzylamides of unsaturated fatty acids; Production of —— for use as pepper substitutes. (P) Ott .. B493
Hydroxyethylarsinic acid; Manufacture of ——. (P) Poulenc Frères, and Oeschslin .. B768
Hydroxyl value of fats; Gravimetric determination of ——. Elsbach .. B23
value of oils and fats; Determination of —— by Normann's method. Meigen and Ramgo .. B184
Hydroxylamine; Determination of —— with permanganate. Kurtenacker and Neusser .. B232
Electrolytic preparation of ——. Ponzio and Pichetto .. B868
Hydroxymethylanthraquinones; Action of drugs containing —— on fermentation. Orient .. B307
Hydroxymethylfurfural from cellulose and its derivatives. Heuser and Schott .. B89
1-Hydroxynaphthalene-8-sulphamide; Preparation of ——. (P) Soc. of Chem. Ind. in Basle .. B862
2.3-Hydroxynaphthoic acid; Manufacture of ——:
(P) Cone, and National Aniline and Chemical Co. B862
(P) Wallach, and Grasselli Chemical Co. .. B10
Manufacture of sulphonic acids of arylides of ——. (P) Meister, Lucius, und Brüning .. B88*
Producing azo dyes on the fibre from arylamides of ——. (P) Chem. Fabr. Griesheim-Elektron .. B708
2.3-Hydroxynaphthoic acid anilide; Derivatives of ——. Battegay and others .. B551
α-Hydroxynitriles; Hydrolysing ——. (P) Sell, and Roessler and Hasslacher Chemical Co. .. B353
p-Hydroxyphenylethylamine; Preparation of —— from tyrosine. (P) Zemplen .. B811
Hydroxyquinones; Steric influence in condensation of —— with o-diamines. Kehrmann and Buffat .. B125
Hydroxysulphobenzoic acids and their homologues; Production of solutions of mercury derivatives of ——. (P) Chemosan A.-G. .. B927, B997*
Hygroscopicity; Relative drying power of substances as a measure of their ——. Obermiller .. B542
Hyphomycetes; Preparation of organic acids by biological methods with the aid of ——. Falck and Van Beyma thoe Kingma .. B640
Production of gluconic acid by ——. Falck and Kapur .. B649
Hypnotic compounds; Analgesic and ——. (P) Volwiler, and Abbott Laboratories .. B233
properties of hydrobenzoin and its alkylated homologues. Tiffeneau and Torres .. B197
Hypnotics; Chemical functions of —— in particular of hydantoin derivatives. Lumière and Perrin .. B846
Hypobromous acid; Preparation and determination of ——. Billmann and Rimbert .. B53
Hypochlorite composition. (P) Gegenheimer, and Mathieson Alkali Works .. B334
solutions; Electrolysis of ——. Foerster .. B907
Hypochlorites; Electrolytic tanks for manufacture of ——. (P) Carrera .. B753
Industrial control in manufacture of ——. Pozzi-Escot .. B786
Manufacture of ——. (P) Taylor and others B173, B174*, B334, B597*
Production of solid alkali ——. (P) Wieger .. B421
Use of antimony trichloride for volumetric determination of ——. Feigl and Schummer .. B710
Hypochlorous acid; Bleaching action of ——. Trotman 240T, B939
Monochloroamine, the amide of ——. Raschig .. B744
Hyponitrous acid. Raschig .. B744
Hypophosphite; Oxidation of — by permanganate. Kolthoff B866
Hypophosphorous acid; Bromometric determination of ——. Manchot and Steinhäuser .. B939
Determination of phosphorous acid and ——. Brukl and Behr .. B696
Reaction of —— with chromic acid and its effect on the titration of iron. Mitchell .. B376
Use of —— in gravimetric analysis. Determination of mercury, gold, and palladium and separation of these metals from other metals. Moser and Niessner .. B202
Hyposulphites and hyposulphurous acid. *See* **Hydrosulphites** and Hydrosulphurous acid.

Invertase. Von Euler and Josephson B271, B531
action; Characteristics of ——. Nelson and Bloomfield .. B531
action; Uniformity in ——:
Nelson and Hollander B227
Nelson and Kerr B531
Affinity of —— for different sugars:
Josephson B609, B724
Von Euler and Josephson B347
Calculation of activity-p_H curve of ——. Von Euler and others B609
Chemical researches on ——. Canals B438
Decomposition of —— by enzymes. Von Euler and Josephson B761
in honey. Nelson and Cohn B843
Identity of raffinase and ——. Josephson B724
Inactivation of —— by amines. Myrbäck B307
Inactivation of —— in fresh yeast by silver nitrate. Von Euler and Walles B347
Inactivation of —— by heavy metals. Myrbäck B307
Influence of stereoisomeric sugars, non-hydrolysable carbohydrates and glucosides on activity of yeast ——. Kuhn B609
Method of action of ——. Von Euler and Josephson .. B1024
Nitrogen content of ——. Josephson B724
preparation; Properties of a highly active ——. Myrbäck B1024
Repeated use of —— for inversion of sucrose in preparation of invert sugar, artificial honey, etc. Schmidt .. B108, B992
Sorptive power of metal hydroxides for ——. Von Euler and Nilsson B609
Iodate-iodide determinations. Hasselskog B594
Iodates and sulphites; Theory of Landolt reaction between ——. Thiel and Meyer B867
Iodide-iodate determinations. Hasselskog B594
Iodides; Determination of iodine in ——. Weicherz and Klinger B466
Production of compounds of alkali iodides and metal —— of therapeutic value. (P) Truttwin B967
Iodine; Action of —— on carbohydrates. Vintilescu and Faitis B190
Action of —— on hydrocarbons. Nellensteyn B285
Additive power of —— with regard to ethylenic compounds. André B130
in algæ; Simultaneous determination of mineral and organic ——. Lelièvre and Ménager B419
-bromine value of fats. Winkler B755
Detection of chlorine, bromine, and —— in mixtures of halides. Kunft B695
Determination of —— in food, drink, and excreta. McClendon B689
Determination of —— in iodides. Weicherz and Klinger .. B466
Determination of —— in large samples of foodstuffs. McClendon and Rask B612
Determination of minute quantities of —— in biological material. Kelly and Husband B970
ions; Detection of —— in presence of other ions giving a precipitate with silver nitrate:
Pamfil B581
Pamfil and Wonnesch B851
in organic compounds; Hydrogenation method for determination of ——. Ter Meulen and Heslinga B36
Oxidation method of determining chlorine, bromine, and —— in organic compounds. Heslinga B357
Preparation of solid solutions of ——. (P) "Chemia" Ungarische Chem. Ind. A.-G., and Von Dalmady .. B654
Reactivity of —— towards fats. Behaviour of iodine-iodic acid solutions. Margosches and Hinner B719
Reactivity of —— towards fats. Production of acidity in the reaction and mechanism of its formation. Margosches and Hinner B341
Recovery of —— from titration residues. Kleinstück and Koch B357
Solubility of —— in chloroform. Grimbert and others .. B173
Solubility of —— in chloro-hydrocarbons. Margosches and others B889
solution; Function of mercuric chloride in Hübl's ——. Margosches and Hinner B640
solution; Influence of water on course of reaction of unsaturated fatty acids and fatty oils with alcoholic ——. Margosches and others B680
solution; Injurious effects caused by ——. Rupp B595
solution; Mechanism of reaction of alcoholic —— with fats. Margosches and others B877
solutions; Behaviour of aqueous —— towards fats. Margosches and Hinner B564
Sorption of —— by carbons prepared from paraffin hydrocarbons, carbon dioxide, aromatic hydrocarbons and derivatives, and from the products of oxidation of wood charcoal with fuming nitric acid. Firth and others .. B362
starch reaction:
Dhar B271
Lottermoser B271
value of fats etc.; Bromometric determination of ——. Manchot and Oberhauser B564
value of fats; Comparative investigations on determination of ——. Schmidt-Nielsen and Owe B302
value of fatty oils; Rapid determination of ——. Margosches and others B639
Iodine—*continued.*
value of oils; Determination of ——. Sabalitschka and Dietrich B525
value of oils and fats; Method of determining —— using pyridine sulphate dibromide. Rosenmund and Kuhnhenn B23
values of cottonseed oil and coconut oil; Influence of solvents on Hanus ——. Bankston, jun., and Vilbrandt .. B681
Iodo-derivatives of carbamic esters; Preparation of ——. (P) Chinoin Fabr. Chem.-pharm. Produkte A.-G. B769
7-Iodo-8-hydroxyquinoline-5-sulphonic acid; Preparation of a solution of emetine and ——. (P) Behringwerke A.-G. B355
Iodometric determinations using centinormal solutions. Rupp and Maiss B620
distillation method of determining highly oxidised substances; Bunsen's ——. Jander and Beste B619
Iodometry; Bromometry as substitute for ——. Manchot and Oberhauser B236
5-Iodo-4-nitroacenaphthene. Morgan and Stanley 344T

-silicon alloys; Specific gravity of —— in relation to composition. Hengstenberg B750
Simultaneous electrometric determination of manganese and ——. Müller and Wahle B37, B317
Solution of —— by carbonic acid. Corrosion of wet-gas-meters. Leybold B471
Specific and latent heats of ——. Mallock B912
Stainless ——. Moneypenny B97
Submerged corrosion of ——. Whitman and Russell 193T, 197T, B946
-tin alloy; Process of forming ——. (P) Alexander, and American Smelting and Refining Co. B429
Titration of ferrous —— with permanganate. Kolthoff and Smit B894
Treatment of ——. (P) Graham B561
Use of amalgamated zinc in evolution method for determination of sulphur in ——. Ashida B385
Volumetric determination of —— in ores by means of titanous chloride. Brandt B460
Volumetric determination of sulphur in ——. Pinsl B177
in water; Defect in permanent colour standards for determination of ——. Whipple B764
wrought-; Case-hardening ——. (P) Bailey B221
wrought-; Manufacture of ——. (P) Hibbard, and Hibbard Process Corp. B100*
wrought-; Manufacture of alloy ——. (P) Aston, and Byers Co. B600
wrought-; Manufacture of —— by piling. (P) Morgan .. B561
Iron chloride lyes; Treatment of ——. (P) Henkel und Co., and Weber B256
Iron compounds of sulphur; Decomposition of various —— under simulated ceramic kiln conditions. Jackson B513
Iron cyanides; Rapid determination of cyanogen in complex ——. Bellucci and Ricca B556
Iron-cyanogen compounds. Kohn and Benczer B55
Iron-heparin, an iron compound of the nucleoprotein of the liver. Grüning B766

PAGE

Iron oxide; Manufacture of red ——. (P) Tyrer B756*
as material for insoluble anodes. Fedotieff and Petrenko .. B21
pigments; Effect of —— on rate of oxidation of linseed oil. Rhodes and others B916
pigments; Production of ——. (P) Saunders, and Chemical Specialties Co. B641
Production of colloidal solutions of ——. (P) Stadnikoff and others B17
Iron oxides; Equilibria involving ——. Eastman and Evans .. B456
Iron pentacarbonyl; Derivatives and reactions of ——. Freundlich and Cuy B215
Iron salts; Catalytic and induced oxidation in presence of ——. Goard and Rideal B214
salts; Induced oxidation, and explanation of the internal use of ——. Dhar B925
Iron sulphates; Vapour pressures of sulphur dioxide, sulphur trioxide, and oxygen over heated ——. Thompson and Tilling 38T
Irradiated air; Supposed influence of —— on growth. Webster and Hill B533
Irrigation water; Influence of —— on composition of grains. Greaves and Carter B269
Isoborneol; Preparation of —— from turpentine oil. (P) Andreau, and Du Pont de Nemours and Co. B233
Isocaine. *See* p-Aminobenzoyldi-isopropylaminoethanol hydrochloride.
Isocyanines. *See under* Quinoline dyestuffs
Isodiphenetidine; Preparation of ——. Whiston 360T
Iso-β-eucaine; Resolution of ——. King B276
Isoeugenol; Conversion of eugenol into ——. Gokhale and others B147
Iso-γ-acid. *See* 2-Amino-5-naphthol-7-sulphonic acid.
Isophenolphthalein and some of its derivatives. Orndorff and Barrett B1007
Isoprene and caoutchouc. Homologues of hydrocaoutchouc. Staudinger and Widmer B954
Diprene, a new terpene from ——. Aschan B925
Formation of a cancer-producing substance from ——. Kennaway B822
Isopropyl alcohol; Purifying and deodorising ——:
(P) Bue. and Standard Development Co. B732
(P) Mann, jun., and Hunt B890
(P) Mann, jun., and others B616
Isopropyl ether; Manufacture of ——. (P) Mann, jun., and Hunt B447
Isopropylallylbarbituric acid; Production of a compound of ——. (P) Preiswerk, and Hoffmann-La Roche Chemical Works B538*
Isosaccharosan. *See* Isosucrosan.
Isosucrosan; Constitution and synthesis of ——. Pictet and Stricker B882
Isovaleric acid; Salts of —— with organic bases (P) Goldschmidt and Neuss B493

J

J-acid. *See* 2-Amino-5-naphthol-7-sulphonic acid.
Jam making; Presence of starch in pectin solutions used in ——. Perrier.. .. .. B689
Japaconitine; Different isomerides of ——. Majima and others B923
Japans; Manufacture of ——. (P) Gardner B391
Preparation of stoving ——. (P) General Electric Co. .. B953
water-; Manufacture of ——. (P) Davey, and General Electric Co. B63
Jatropha stimulosa seeds; Composition of ——. Menaul .. B230
Jellies as contrasted with gels and curds. Soaps in dry alcohol. Laing and McBain B755
Jelly base containing pectin; Dry powdered ——. (P) Leo and Leo B1027
Composition of a sugary crystalline crust on a currant —— kept at low temperature. Muller and Peytral B439
strength determinations; Unresolved factors in ——. Sheppard and Sweet B644
Jerusalem artichoke; Composition of ——. Shohl B195
Jesaconitine; So-called ——. Majima and Morio B924
Jet flames. Payman B971
Joints for high pressure in metals and other rigid materials. (P) Darroch B82
Jones reductor: Use of cool solutions in the ——. Lundell and Knowles B771
Jute; Treatment of ——. (P) Ironside B212

K

Kaolin; Behaviour of —— on heating:
Houldsworth and Cobb B175
Vernadsky B175
Colloid-chemical characterisation of technical ——. Ostwald and Pickenbrock B597
Colloidal plasticity of ——. Bigot B134
Decomposition of ——. (P) Hess B334

Kaolin—*continued.*
Drying ——. (P) Vivian B469
Fused ——. Bigot B257
and the like; Bleaching ——. (P) Gandlu, and Dartmoor China Clay Co. B749
Product of the dehydration of ——. Agafonoff and Vernadsky B422
Removal of brown coloration in ——. (P) Holden B514
Treatment of ——. (P) Stocker B511
Kaustobiolites; Isolation of the organic matter present in ——. Galsser B816
Kawa-kawa; Chemistry and pharmacology of ——. Schübel .. B766
Kelp brines; Equilibria used in manufacture of potassium chloride from ——. Turrentine and Tanner B376
Kerogen; Constitution of ——. McKinney B499
Kerosene; Characteristics of hydrocarbons in American mid-continent ——. Wagner B243
Kessyl alcohol. Asahina and Hongo B729
β-Keto-bases; Preparation of ——. (P) Mannich B402, B849
Ketobutyric acids; Preparation of ——. (P) Meister, Lucius, and Brüning B354
Ketocamphor. *See* Diketocamphane.
Keto-derivatives of the morphine series; Preparation of ——. (P) Knoll u. Co. B402
Ketofenchone. *See* Diketofenchane.
Ketones; Cathodic reduction of ——. Schall and Kirst B75
Manufacture of ——. (P) Wells and Hunt B732
Preparation of hydroaromatic ——. (P) Bayer und Co. .. B233
Production of cyclic ——. (P) Riedel A.-G. B891
of the pyrrole series; Preparation of ——. (P) Kalle und Co. B890
Use of aliphatic acid anhydrides in preparation of —— by the Friedel-Crafts reaction. Noller and Adams B847
Kiers for textile materials:
(P) Garner B415
(P) Kiernan, and Lowell Bleachery B465
Vomiting —— for bleaching textiles. (P) Jefferson B332
Kieselguhr; Furnace for calcining ——. (P) Bünte and Rudeloff B133
Sterilisation of sugar juices and liquors by treatment with ——. Calvert and Knight B226
Treatment of —— for use in filtration. (P) Ritchie, and Celite Co. B774
See also Diatomaceous earth.
Kieserite; Manufacture of sulphurous acid from ——. (P) Spanier, and Heetfeld und Co. B943
Production of pure —— from the crude material. (P) Crotogino and Crotogino B421
Kilns:
(P) Bivius B469
(P) Stevens B972
Annular tunnel ——. (P) Woodall, Duckham, and Jones (1920), Ltd., and Duckham B748
Brick ——. (P) Canavera B218
burning refractory ware; Combustion in ——. Sherman .. B381
for calcining alkaline-earth sulphates or magnesium sulphate. (P) Akt.-Ges. f. Anilin-Fabr. B17
Combustion of powdered and fluid fuel in ——. (P) Procter.. B587
Continuous ——. (P) Mayer and Stoerzer B96*
Continuous tunnel ——. (P) Dressler, and American Dressler Tunnel Kilns, Inc. B335
Device for heating ——. (P) Ward B336
Heating rotary —— for coal distillation. (P) Holzwarth, and Lignite Coal and By-Products Corp. B501
Lime-kilns and like vertical ——. (P) Dumont B714
Longitudinal heating flues for continuous ——. (P) Ziegelbrand Ges. Vesta B423
Muffle tunnel ——. (P) Larsson, and Norton Co. B382
Operation of ceramic muffle-tunnel ——. (P) Zeidler und Co., and Eberl B423
for recovery of by-products from fuel. (P) Newberry .. B367*
Rotary ——:
(P) Fasting B676
(P) Fasting, and Smidth & Co. B774
(P) Nielsen and Laing B455
Rotary —— for burning cement etc. (P) Schneider and Beckman B517
rotary; Burning material in electrically heated ——. (P) Polysius B424
Tunnel ——:
(P) Benjamin B40
(P) Booth B58
(P) Dressler, and American Dressler Tunnel Kilns, Inc. B830, B972
(P) Hanley, jun. B972
(P) Koppers B830
(P) Meehan, and American Dressler Tunnel Kilns, Inc. B515, B515
(P) Miller B382
(P) Owens B1000
(P) Straight B469
Tunnel —— for ceramic ware. (P) Huhne B295
tunnel-; Equalising the heat distribution in ——. (P) Spindler, and Allgem. Elektrizitäts-Ges. B719
tunnel-; Gas-fired ——. (P) Lengersdorff B58
Tunnel —— for porcelain. (P) Meiser B515
Tunnel —— with steam-generating cooling zone. (P) Dressler, and American Dressler Tunnel Kilns, Inc. .. B719*
Twin-tunnel —— and method of operating them. (P) Dressler, and American Dressler Tunnel Kilns, Inc. .. B749
Vertical gas-fired —— for burning limestone or the like. (P) Priest B517
Working of gas-fired continuous ring ——. (P) Heuer .. B335

PAGE
Kojic acid; Constitution of ——. Yabuta B443
Konyaku; Swelling and viscosity of Japanese ——. Dokan .. B763
Kryptocyanine. *See under* Quinoline dyestuffs.
Kunzite; Active agents in luminescent ——. Tanaka B595

L

Laboratory apparatus. Patterson 281T, B968
Lac products; Application of micro-methods to analysis of ——. Somayajulu B798
resin; Ether-soluble constituents of ——. Gupta B797
Laccase; Method of determining activity of a ——. Fleury .. B307
Lacquer coatings; Speed of evaporation of solvents from pyroxylin ——. Gardner and Parks B1008
Lacquers; Furfural as solvent in preparation of ——. Gardner.. B758
Preparation of —— from nitrocellulose and the like. (P) Byk-Guldenwerke Chem. Fabr. B24
Lactalbumin; Nutritive value of ——. Osborne and Mendel .. B533
Lactates; Use of —— for preparing solutions of sparingly soluble substances. (P) Pohl B809
Lactic acid; Action of —— on concrete silos. Grün B440
and its anhydrides; Equilibrium between ——. Thurmond and Edgar B808
bacilli; Enzymic studies on ——. Virtanen B649
Conversion of cellulose into —— by heating under pressure with aqueous alkalis. Fischer and Schrader B575
Removal of the carboxyl group from ——. Fischer and others B575
Lactic bacteria; Influence of bactericidal power of raw milk on lactic organisms in sterilised milk and empirical selection of lactic bacteria. Mazé B488
fermentation. *See under* Fermentation.
Lactoproteins; Precipitation of —— by copper salts. Vandevelde B194
Lactosan. Pictet and Egan B395
Lactose; Action of hydrogen peroxide and hypochlorous acid on ——. Craik 172T
Determination of dextrose in presence of ——. Fleury and Tavernier B920
-fermenting spore bearers; Anaerobic —— in the Minneapolis water supply. Raab B72
Polarimetric and gravimetric determination of ——. Bacharach B27
Recovering —— from milk or whey. (P) Ryan, and Carnation Milk Products Co. B761
Laevulose; Mechanism of oxidation of —— in phosphate solutions. Meyerhof and Matsuoka B760
Preparation of —— from invert sugar. (P) Herzfeld and Passer B88
Saturation relations in mixtures of sucrose, dextrose, and ——. Jackson and Silbee B956
Lakes; Colour —— from azo dyestuffs. (P) McAllister, and Du Pont de Nemours and Co. B10
Influence of dyestuff diluent in production of ——. Fearnsides B603
Lampblack; Manufacture of ——. (P) Hopkinson B720
and other substances; Manufacture of ——. (P) McGuire .. B756
Landolt reaction between sulphites and iodates; Theory of ——. Thiel and Meyer B867
Lantern slides; Warm-tone ——: relation between exposure, development, colour, and gradation. Thorne-Baker and Davidson B279
Lard; Glycerides of ——. Amberger and Wiesehahn .. B229, B230
Latent heats of vaporisation of liquids; Determination of —— at high pressures. McAdams and Morrell B929
Latham Research Fellowship; Chemistry of cellulose. Cross .. 171T
Lathyrus; Alkaloid content of seeds of some species of ——. Guillaume B311
Lava; Utilisation of ——. Montemartini and Losana .. B130
Leaching; Preparation of silver ores and other metallurgical products for ——. (P) Hennes B20
See also Lixiviation.
Lead; Activities of zinc, cadmium, tin, bismuth, and —— in their binary liquid mixtures. Taylor B137
-alkali metal alloys; Manufacture of —— (P) Calcott and Du Pont de Nemours and Co. B950
and alkaline-earth metals; Production of alloys of ——. Jellinek and Tomoff B873
alloys. (P) Siemens und Halske A.-G. B339
alloys; Determination of magnesium in ——. Fetkenheuer and Konarsky B791
alloys; Manufacture of ——:
(P) Mathesius and Mathesius B138, B718*
(P) Metallbank u. Metallurgische Ges. B21
alloys for use in manufacture of electric storage battery plates. (P) Hell B341
-antimony-copper; The ternary system ——. Schack .. B259
-bismuth alloys; Hardness of ——. Di Capua and Arnone.. B260
blast furnace; Thermal balance in a ——. Hamilton .. B470
bullion; Calculating the zinc for desilverising —— by the Parkes process. Griswold B19
-cadmium alloys; Hardness of ——. Di Capua and Arnone B560
-calcium alloys; Manufacture of ——. (P) Metallbank u. Metallurgische Ges. B21
Case of failure in ——. Blazey B19
Colorimetric determination of small quantities of —— in drinking water. Pyriki B845

PAGE
Lead—*continued*.
-copper-iron alloys. Guertler and Menzel B259
-copper-nickel alloys. Guertler and Menzel B259
in cream of tartar; Colorimetric determination of ——. Andrew B352
Determination of —— in lead-tin alloys. Kraus B473
Determination of —— in potable water and in urine. Thresh B350
Effect of —— on 80 : 40 brass. Hauser B426
Electro-deposition of —— on iron. (P) Summers B875
Electrolytic crystallisation of ——. Kohlschütter and Uebersax B636
Electrolytic deposition and refining of ——. Titschack .. B834
Grain growth in antimonial ——. Dean and Hudson .. B835
Gravimetric determination of —— in presence of tin and antimony. Stelling B678
Hydrometallurgy of ——. Ralston B209
Manufacture of alloys of barium or strontium with ——. (P) Knoll, and Metallbank u. Metallurgische Ges. B301
Microchemical detection of ——. Fairhall B80
ore; Results obtained in large-scale flotation of ——. Mayer and Schön B19
Oxidation of ——. (P) Huffard and others B511
powder; Manufacture of —— intermingled with lead suboxide powder. (P) Shimadzu B711
Production of ——. (P) Platten B181
Refining ——. (P) Harris B222*, B679
Relative corrosion of zinc and —— in solutions of inorganic salts. Friend and Tidmus B337
-silver anodes for electrolysis of brine. Fink and Pan .. B906
Solubility of lead sulphate in dilute sulphuric acid solutions and its bearing on quantitative separation of —— as sulphate. Dawkins and Weldon B870
Solution of —— in alkaline liquids by alternating current. Jirsa and Fabinger B562
-thallium alloys; Hardness of ——. Di Capua B99
-tin alloys; Hardness of ——. Di Capua and Arnone .. B560
Treating materials containing zinc and ——. Berglund .. B914
Treating sulphide ores of silver, copper, and——. (P) Christensen B388
Volumetric determination of —— in non-ferrous metals and alloys. Prum B59
-zinc-antimony alloys. (P) Doeblin B388
-zinc-cadmium system. Cook B337
-zinc sulphide ores, mattes, and the like; Treatment of ——. (P) Ashcroft B282
-zinc sulphide ores; Treatment of ——. (P) Ashcroft .. B637
Lead arsenate, basic; Preparation of —— of definite composition. Streeter and Thatcher B867
Lead arsenate; Preparation and properties of colloidal —— for sprays. Brinley B311
Rapid determination of lead and arsenic in ——. Hedges and Stone B831
Rapid determination of water-soluble arsenic in ——. Roark B631
Lead azide detonators; Containers for ——. (P) Davey, Bickford, Smith et Cie. B280
explosives; Manufacture of ——. (P) Davey, Bickford, Smith et Cie. B771
Manufacture of casings of electrolytic iron for detonators and cartridges containing ——. (P) Weir, and Nobel Industries, Ltd. B403
Lead carbonate, basic; Effect of gelatin on size and distribution of particles in electrolytically precipitated ——. France and McBurney B391
Lead chromate compound; Manufacture of a ——. (P) Schumacher, and Acme White Lead and Color Works .. B343
Lead chromates; Production of yellow, orange, and red —— in one operation by electrolysis. (P) Luckow B265
Lead nitrate; Manufacture of hydrated manganese dioxide and ——. (P) Westling and Winship B788
Manurial properties of ——. Berry B269
Lead oxide; Manufacture of ——:
(P) Price, and Quirk, Barton and Co. B917
(P) Weicischeid B908
Polymorphous forms of ——. Kohlschütter and Scherrer .. B378
See also Litharge
Lead oxides; Manufacture of ——. (P) Thibault B257*
Lead peroxide; Bromometric analysis of ——. Rupp and Siebler B466
Manufacture of ——. (P) Grunbaum B870
Lead phosphates; Solubility of —— in water and lactic acid solution. Fairhall and Shaw B867
Lead salts; Deposition of —— in bone. Fairhall and Shaw .. B867
salts of picric acid and 2.4.8-trinitro-1.3-dihydroxybenzene; Production of normal ——. (P) Thomas and others .. B618
Lead suboxide; Manufacture of powder of —— intermixed with lead powder. (P) Shimadzu B711
Technical method of making ——. Gutersohn B595
Lead sulphate; Manufacture of ——:
(P) Gitsham and Evershed B597*
(P) Mackay B335*
Solubility of —— in dilute sulphuric acid solutions. Dawkins and Weldon B670
Lead tetra-ethyl; Decomposition of —— and its application to explosion-engines. Jolibois and Normand B700
Suggested mechanism of anti-knock action of —— in internal-combustion engines. Wendt and Grimm B856
Leather; Acidity of vegetable-tanned ——. Kohn and Crede .. B955
Action of trypsin on various kinds of ——. Thomas and Seymour-Jones B267
artificial; Manufacture of ——. (P) Rautenstrauch and Trenzen B841

Leather—*continued*.
belting; U.S. Government specification for —— B188
chrome-; Analysis of ——. Woodroffe B529
chrome-; Report on analysis of ——. Innes B25
chrome-; Resistance of —— to the action of alkaline solutions. Chambard and Queroix B528
chrome upper-; Effect of perspiration on ——:
Innes B26
Woodroffe and Green B26
Defective grain in chrome-tanned ——. Riera B436
Determination of chromium in ——. Wagner B529
Determination of moisture in ——. Veitch and Jarrell .. B955
Determination of sugar content of ——. Frey B643
Determination of sulphuric acid in ——. Jalade B644
Effect of certain de-leading agents upon hydrolysis in determination of reducing sugars in ——. Clarke and Frey .. B528
"Free" mineral acid in ——. Pickard and Caunce .. B435
Impregnating vegetable, animal, and mineral fibres, yarns, and fabrics with ——. (P) Scholz B464*
Indicator paper test for acidity in ——. Bradley and Cohen B684
and the like; Preserving —— from attack by animal and vegetable pests. (P) Berkeley and Stenhouse B945
Manufacture of ——. (P) Forselles B225
Manufacture of imitation ——. (P) Exportingenieure für Papier und Zellstofftechnik B105
Manufacture of —— from intestines. (P) Von Markus .. B393
Manufacture of glove —— without the use of egg-yolk. (P) Simon, sen. B567
Manufacture of mineral-tanned ——. (P) Röhm B436
Micro-Kjeldahl method of determining nitrogen in ——. Reibein B26
Production of material for sizing or ground-coating ——. (P) Eggers and Burlin B104
Production of washable printings on ——. (P) Combe et Fils et Cie. B268
Radioactive ——. (P) Tapparelli B481
Sulphonation of marine animal oils for preparation of fat-liquoring materials for ——. Rose and Kell B918
tanned with synthetic tannins; Determination of free mineral acid in ——. Van der Hoeven B841
tanned with synthetic tans; Examination of ——, especially determination of free sulphuric acid. Van der Hoeven .. B758
Temperature of gelatinisation of —— and its application to study of single-bath chrome tanning. Schiaparelli and Careggio B142
Temperature at which —— shrinks. Powarnin and Aggeew B759
Treating waste —— for manufacture of glue. (P) Kraus .. B304
Treatment of —— and of leather waste. (P) Russell and Broomfield B268
Utilisation of —— in manufacture of commercial fertilisers. Skooglund B484
Lecanora tartarea; Orcinol content of ——. Patterson 190T
Lecithin and its derivatives; Stable preparations from —— suitable for internal use. (P) Wintsch B812
from the eggs of the shark; Lecithiburin, a ——. Ponce .. B996
Hydrolysis of —— by taka-diastase. Akamatsu B28
Preparation of aqueous emulsions of ——. (P) Merck and Eichholz B769
Presence of vitamin A in commercial ——. Eichholtz .. B228
Production of compounds of —— with bile acids and their alkali salts. (P) Boehringer Sohn B927
Lecithins; Synthetic ——. Levene and Rolf.. .. .. .. B888
Lecithiburin, a lecithin from the eggs of the shark. Ponce .. B996
Leguminosæ; Alkaloid content of seeds of some ——. Guillaume.. B31t
Lehrs; Electrically heated ——. (P) Dixon Co. B468
Glass-annealing ——:
(P) Dixon, and Dixon Co. B748
(P) Pike B423
Lemon juice; Antiscorbutic fraction of ——. Zilva .. B349, B726
peel; Protopectin and some other constituents of ——. Sucharipa B230
Lemons; Hastening the coloration of ——. Denny B726
Lens esculenta; Cystine deficiency and vitamin content of ——. Jones and Murphy B533
Lentils; Cystine deficiency and vitamin content of ——. Jones and Murphy B533
Leopard fat. Rae B264
Leptospermum citrata; Essential oil of ——. Penfold B33
Leptospermum Liversidgei; Essential oil of ——. Penfold B33
Leptospermum scoparium; Essential oil of ——. Gardner .. 34T, B400
l-Leucic acid; Formation of —— in acetone-butyl alcohol fermentation. Schmidt and others B843
Leucite and the like; Treatment of ——. (P) Rody, and Metallurgical Co. of America B632
rocks; Treatment of ——. (P) Giordani, and Pomilio Bros. Corp. B632
Utilisation of ——. Montemartini and Losana B130
Leucocytes; Comparison of activities of antiseptics on bacteria and on ——. Fleming B490
Levan gum; Formation of —— from sucrose. Owen B107
Level of liquid in high-pressure stills or other vessels; Apparatus for indicating ——. (P) Int. Bergen-Cie. voor Olie- en Kolen-Chem., and Löffler B657
Lichen starch; Constitution of ——. Pringsheim and others .. B921
Lichenase. Karrer and Staub B957
and cellobiase. Pringsheim and Leibowitz B147
and lichenin:
Karrer and others B249
Pringsheim and Kusenack B760
Separation of —— into its constituent enzymes. Karrer and others B272

Lichenin. Karrer and Staub B957
Cleavage of —— into dextrose. Karrer and Staub B568
and lichenase:
Karrer and others B249
Pringsheim and Kusenack B760
Methylation products of ——. Karrer and Nishida B373
Occurrence of —— in lichens and other plants. Karrer and others B250
Lichens; Dyeing properties of some Scottish ——. Patterson 189T, B669
Lidstone viscosimeter; Design and use of the ——. Barr .. 29T, B968
Light filter for use in detection of potassium. McCay B156
filters; Preparation of ——. (P) Schloemann, and Kino-Film Co. B579
of short wave length; Method of protecting against ——. (P) Eder B451, B967*
Lignin; Acetylation of ——. Heuser and Ackermann .. B464, B553
Action of antimony pentachloride on ——. Tropsch B169
Action of nitric acid on ——:
Fischer and Tropsch B169
Tropsch and Schellenberg B323
Alkoxyl groups of pine wood and ——. Hägglund and Sundroos B592
Behaviour of —— during decay. Fischer B584
Chemical structure of coal and ——. Schrauth B42
Comparative investigations of cellulose and ——. Fischer and Tropsch B127
content of spruce wood. Klason B89
Determination of —— in wood. Von Euler B127
Determination of —— in wood cellulose. Wenzl B464
Effect of heating under pressure and fusion with alkali on ——. Fischer and Tropsch B169
Flax —— and some derivatives. Powell and Whittaker .. B289
Nature of ——. Strupp B290
Pentosan-content of ——. Hägglund B89
Potash fusion of ——. Heuser and Herrmann B290
prepared by the hydrochloric acid process. Hägglund and Björkman B706
Pressure oxidation of ——. Fischer and others B168
Lignite ash containing calcium sulphate; Manufacture of cement from ——. (P) Luftschitz B983
ash; Production of building material from ——. (P) Novo-Mörtel Ges. B945
briquettes. *See under* Briquettes.
Briquetting extracted ——. Plening B324
Carbonisation of ——. (P) Davies B500
Carbonisation of briquetted ——. Müller B361
coke. *See under* Coke.
Dehydrated ——. (P) Schoch B898
deposits; Occurrence of rubber in Mid-German ——. Kindscher B757
Destructive distillation of —— and recovery of products therefrom. (P) Box B46
Determination of sulphur in ——. Bauriedel B324
Determination of volatile matter and combustible matter in ——. Joseph B43
Gasifying ——. (P) Soc. Anon. de Construction de Fours à Coke B662
Genetic relationships of coal and ——. Erdmann B622
Hydrogenation of —— by means of carbon monoxide in presence of ammonia and pyridine. Schrader B285
Hydrogenation of —— with a mixture of carbon monoxide and water and with molecular hydrogen. Waterman and Kortlandt B1002
Low-temperature carbonisation of ——:
Berthelot B545
Trutnovsky B325
Oxygen absorption of —— in presence of alkali hydroxide. Von Walther and Bielenberg B775
paraffin oil, a benzol wash-oil not requiring regeneration. Thau B408
Preparation of plastic masses suitable for insulating purposes from ——. (P) Planson B641
Quantity and nature of gases evolved by action of heat and vacuum on ——. Lebeau and Marmasse B775
slack; Commercial gasification of ——. Bunte B817
slacks; Ignition temperatures of some ——. Faber B931
Lignocellulose; Action of aqueous sulphurous acid on ——. Cross and Engelstad 253T, B782
Gelatinisation of ——. Schorger B250
Lignoceric acid. Levene and others B838
Lignone derivatives; Manufacture and applications of new ——. (P) Cross and Engelstad B707
Lignosulphonic acid. Hintikka B169
obtained by action of sulphurous acid on spruce wood. Dorée and Hall 257T, B783
Lime; Behaviour of —— in the soil. Lemmermann and Fresenius B304
burning; Effects of sodium chloride on ——. Sawai and Yoshioka B131
Burning —— in shaft furnaces. (P) Plauson's Forschungsinst. B424
Changes in soil caused by ——, and their influence on crops. Drushinin B483
combination; Preparation of a therapeutically active colloid-like ——. (P) Donath B692
Determination of water of hydration, water of constitution, and carbon dioxide in hydraulic ——. Muller and Peytral B423
Hydrates of ——. Haslam and others B377
Influence of magnesia on quality of ——. Occhipinti B292
kilns. (P) Dumont B714
liquors. *See under* Tannery.
Manufacture of ——. (P) Roberts B256
Manufacture of sulphurous acid and —— from calcium sulphate and sulphide. (P) Waeser B943
-mortar and lime-plaster; Inadequate hardening of ——. Nussbaum B517
preparations containing a high percentage of readily absorbable antiscorbutic vitamins; Production of organic ——. (P) Eichelbaum B967

PAGE

Lime—*continued.*
Reaction between red arsenic and ——. Atkin and others .. B880
-sand concrete; Manufacture of ——. (P) Caccia B983
and silica; Influence of certain fluxes on softening temperature and fluidity of a monosilicate mixture of ——. Patterson and Summers B261
sludge from causticising in manufacture of paper pulp; Analysis of ——. Walter and Gunkel B160
Specification for hydrated —— for manufacture of sand-lime brick. U.S. Bureau of Standards B383
Specification for hydrated —— for manufacture of silica bricks. U.S. Bureau of Standards B383
-sulphur; Determination of sulphur compounds in dry ——. Jones B31
Utilisation of waste —— from chemical works. (P) Smith .. B787
Yield of hydrated —— from air-slaked lime and magnesian lime. Rebuffat B871
See also Calcium oxide *and* Quicklime.
Lime fruit; Extraction of pectin from the rind of ——. Hardy .. B533
Limestone; Electric furnace for calcining ——. (P) Ewerbeck .. B557
Influence of admixture of different grades of —— on solubility of phosphoric oxide in superphosphate. Hall and Vogel .. B882
Specification for —— for use in manufacture of sulphite pulp .. B91
Vertical gas-fired kilns for burning ——. (P) Priest B517
Linen; Preparing raw —— for bleaching. (P) Bochter B743*
Linolenic acid of perilla oil; Bromides of ——. Bauer B264
Linoleum composition. (P) Sulser, and Elektrizitätswerk Lonza .. B953*
manufacture; Utilisation of tung oil in ——. Fritz B303
Preparation of oils for ——. (P) Calderwood and others .. B682
scraps; Working up of —— into new linoleum. (P) Scholz, and Tiedemann Chem. Werke B186*
substitute; Manufacture of ——. (P) Ritschke B669
Linoxyn; Material suitable as substitute for —— and for other purposes. (P) Pohl, and Jäger Ges. B303
Linseed oil. *See under* Oils, Fatty.
Lipase of castor oil bean. Willstätter and Waldschmidt-Leitz .. B639
Preparation and industrial application of castor seed ——. Kita and Osumi B182
in sunflower seeds. Tractta-Mosca and Milletti B23
of takadiastase. Ogawa B986
Lipases of various origins; Susceptibility of —— to toxins. Rona and Petow B610
Lipins; Action of paraldehyde upon ——. Cooper B964
Lipochromes; Extraction and determination of —— in animal and plant tissues. Coward B935
Liquids; Apparatus for formation and separation of solids from —— by heat interchange. (P) Field B737*
Apparatus for producing a counter-current action between —— and large quantities of gases or vapours. (P) Metan Ges. B283
Apparatus for removing gases from ——. (P) Signal Ges. .. B160*
Apparatus for transferring heat to or from viscous ——. (P) Price and others B39
Apparatus for treating —— with gases:
(P) Palmer B816
(P) Sleck, jun., and Sleck and Drucker, Inc. B3
Apparatus for washing —— with liquids. (P) Koppers, and Koppers Coke Oven Co. B583
Electrical apparatus for treating ——. (P) Landreth B139
Forced convection of heat in ——. Rice B541
and gases; Apparatus for accomplishing physical and chemical reactions between ——. (P) Boulogne and Meillassoux .. B88
and gases; Apparatus for bringing —— into intimate contact. (P) Holmes and Co., Ltd., and others B118
and gases; Apparatus for effecting intimate contact of ——:
(P) Lloyd and others B159
(P) Wright, and Meldrum's, Ltd. B40
and gases; Apparatus for producing interaction between ——. (P) Marshall, and Koppers Co. B205
and gases; Apparatus for producing intimate mixture between ——. (P) Bayer und Co. B81, B456
and gases; Device for effecting contact between ——. (P) Atkins and others B774
and gases or vapours; Apparatus for reactions between ——. (P) Permutit A.-G., and Schiller B406
Heating and distilling ——. (P) Keep and others B1012
Means for producing disruptive forces in films of —— confined between closely adjacent surfaces, rotating relatively to one another at high speeds. (P) Burt, Boulton and Haywood, and China B929, B929
Metallurgical apparatus for treating —— with gases. (P) Greenawalt B181
Purifying ——. (P) Sauer B398
Purifying or separating apparatus for ——. (P) Svensson and Norling B41
Purifying and sterilising ——. (P) Sauer B995
Separating gases or vapours from, or dissolving gases or vapours in ——. (P) Frasse B40
Separating mixed —— of different volatility. (P) Rialland .. B205
Separating —— from solids by pressing. (P) Soderlund and others B780*
Solidification of organic ——. (P) Ray B327
Treating —— with purifying and decolorising agents. (P) Sauer, and N.V. Algem. Norit Maatschappij B321
Treatment of —— by heat. (P) Rafn B962
Liquor aluminii acetici; Volumetric determination of aluminium in ——. Wohlk B54
Liquorice extract; Detection of extract of *Atractylis gummifera* in ——. Giuffrè B964
Litharge; Manufacture of amorphous finely subdivided ——. (P) Goldschmidt A.-G. B343
Lithium formate; Decomposition of ——. Fischer and others .. B536

PAGE

Lithium nitride; Production of pulverised ——. (P) Urfer .. B510
Lithopone; Apparatus for calcining ——. (P) Mitchell B104*
Calcining ——. (P) Schauche, and Du Pont de Nemours and Co. B480
fast to light. (P) Meister, Lucius, u. Brüning B265
Manufacture of ——:
(P) Dougherty, and Lucius Trust B63
(P) Drefahl and others B392
(P) Holton and others B224
paint films; Examination of ——. Wolff B640
paint, white and light tints; U.S. Government specification for white gloss interior ——. B185
products; Manufacture of ——. (P) Mitchell B185
Tests on light-resistance of ——. Gardner and Holdt B185
titanox (titanium dioxide), and antimony oxide pigments. Gardner B303
Lixiviation of materials. (P) Morterud B930
See also Leaching.
Lixiviators; Counter-current ——. (P) Turrentine B544
α-Lobeline; Preparation of ——. (P) Baeumer, and Boehringer Sohn B810
Loose material; Facilitating physical or chemical reactions in masses of ——. (P) Deschamps B497
Lophophorine. Späth and Gangl B73
Loranthus; Chemistry of ——. Einleger and others B574
Lubricant friction; Determination of ——. Vieweg B661
hydrocarbons in petroleum. Mabery B120
Lubricants; Manufacture of ——:
(P) Dubois und Kaufmann B286
(P) Plauson B124
Manufacture of composite —— from castor oil. (P) Dodge .. B124
for refrigerating machines. (P) Edwards, and Carbide and Carbon Chemicals Corp. B698
U.S. Government specification for —— and methods for testing B660
Lubricating grease; Determination of anhydrous soap in ——. Joachim B661
greases; Preparation of ——. (P) Chem. Werkstätten Ges. .. B822
oils; Apparatus for treating acid sludge from mineral ——. (P) Maitland, and Sun Oil Co. B822
oils; Centrifugal removal of wax from petroleum ——. Jones B6
oils; Determination of asphalt in ——. Evans B6
oils; Lowering the cold test of ——. (P) Weir and Ryan .. B1005
oils; Material for treatment of ——. (P) Prutzman and others B9
oils; Specific heats of ——. Leslie and Geniesse B624
oils; Substitutes for ——. (P) Dubois und Kaufmann .. B286
oils from tar; Improving ——. (P) Otto B48
oils; Variation of viscosity of —— with temperature. König B121, B208
oils; Viscosity of mineral ——. Leu B586
oils; Viscosity and surface tension in ——. Don B818
Lubrication; Mechanism of ——. Barnard and others B932
Lucerne plant; Basic substances from the juice of the ——. Leavenworth and others B230
plant; Nitrogenous constituents of juice of ——. Vickery .. B885
Lumbang oil. *See under* Oils, Fatty.
Lumber; Process of treating ——. (P) Fish, jun., and Wood Products and By-Products Corp. B219
Luminal. *See* Phenylethylbarbituric acid.
Luminescent calcites, aragonites, and dolomites; Active agents in ——. Tanaka B466
zinc sulphides, willemites, and kunzites. Tanaka B595
Lunge nitrometer; Modification of ——. Rivière and Pichard .. B813
Lupin embryo; Metabolism of —— in the presence of calcium and ammonium salts. Smirnow B305
seeds; Determination of alkaloids in ——. Sabalitschka and Zaher B653
seeds; Oils extracted from ——. Guillaume B302
Lupinine; Preparation of halogen derivatives of ——. (P) Kalle und Co. B617
Lupins; Alkaloid content of seeds of some species of ——. Guillaume B311
and offal therefrom; Composition and digestibility of —— before and after removal of bitter substances. Honcamp and others B763
Lupinus spathulatus (Rydb.); Spathulatine, a new alkaloid from ——. Couch B1028
Lupulon; Constitution of ——. Walker B958
Luteolin; Flavylium salts related to ——. Pratt and others .. B247
Lycopin; Colorimetric determination of ——. Connell B935
Lysin; Position of optimum temperature of action of a ——. Brownlee B348
Lysol; Analysis of ——. Dodd 93T, B398

M

Macadamia ternifolia; Fatty oil of nuts of ——. Morrison and Morrison B915
Maclurin; Production of —— from acacatechin. Hazleton and Nierenstein B880
Magadi natural soda; Colouring matter of ——. Nishikawa and Miyake B130
Magnesia; Calcining ——. (P) Schön und Co. B16
cement. *See under* Cement.
Influence of —— on quality of lime. Occhipinti B292
Production and testing of caustic —— for use as an ingredient of mortar and cements. Jesser B296

PAGE

Magnesia—*continued.*
Tests of caustic —— made from magnesite from several sources. Bates and others B383
See also Magnesium oxide.
Magnesite brick; Specific heat of —— at high temperatures. Green B174
bricks; Manufacture of sintered magnesite and ——. (P) Harr B748
cement; Manufacture of ——. (P) Bakewell B517
Chemical properties of ——. Nishimura and Murachi B214
Manufacture of —— *e.g.*, from waste liquors of potash industry. (P) Brinkhoff B95
Production of crystalline —— from waste liquors of potash industry or other solutions containing magnesium salts. (P) Brinkhoff B421
Separating and purifying ——. (P) Richards B557
Magnesium alloys. (P) Chem. Fabr. Griesheim-Elektron B388, B389, B602
its alloys; Casting ——. (P) Chem.-Fabr. Griesheim-Elektron B794*
and its alloys; Casting —— in sand moulds. (P) Chem. Fabr. Griesheim-Elektron B388
and its alloys; Colouring —— by etching. (P) Chem. Fabr. Griesheim-Elektron B182*
alloys; Increasing the electrical conductivity of ——. (P) Metallbank und Metallurgische Ges. B561
alloys; Method of rolling ——. (P) Chem. Fabr. Griesheim-Elektron B222
and its alloys; Protection of —— against oxidation. (P) Chem. Fabr. Griesheim-Elektron B793
or its alloys; Quenching burning ——. (P) Chem.-Fabr. Griesheim-Elektron B753
and its alloys; Treatment of ——. (P) Chem. Fabr. Griesheim-Elektron B101*
-aluminium alloys; Manufacture of powders of ——. (P) Sejournet B522
-aluminium; Electrical properties of the system ——. Mehl B835
Apparatus for electrolytic production of ——. (P) Ashcroft .. B602
Colorimetric determination of —— as phosphate. Briggs .. B581
-copper-aluminium alloys: Ternary ——. Ohtani B136
Crystal precipitation reactions of ——. Rosenthaler B851
Detection and determination of very small quantities of —— by means of ammonium ferrocyanide. Feigl and Pavelka B968
Determination of —— in aluminium, zinc, and lead alloys. Fetkenheuer and Konarsky B791
Determination of phosphoric acid, calcium, potassium, and —— in grain and feeding stuffs. Gilmour B651
Diphenylcarbazide as qualitative reagent for —— in presence of alkaline-earth metals. Kolthoff B202
Electrolytic separation of ——. (P) Rhodin B523, B638*
Iodometric determination of —— as magnesium ammonium arsenate. Klingentuss B852
Manufacture of —— free from silicon. (P) Chem. Fabr. Griesheim-Elektron B602
Precipitation of —— as phosphate from solutions containing tartaric acid in presence of aluminium. Wilke-Dörfurt .. B814
as a qualitative and quantitative reagent in inorganic analysis. Pamfil B580
Reaction of —— with rubidium and caesium. Murmann .. B37
Replacement of sodium and potassium from solutions of their salts by ——. Bergstrom B132
Sensitive colour reaction for detecting —— in aluminium. Hahn and others B928
-silicon alloys; Production of ——. (P) Chem. Fabr. Griesheim-Elektron B876
Technical electrolysis of fused carnallite for production of ——. Fedotieff and Woronin B19
turnings; Rendering —— non-inflammable. (P) Metallbank und Metallurgische Ges. B951
Velocity of dissolution of —— by acids. Centnerszwer .. B19
Magnesium acetylsalicylate; Preparation of ——. (P) Gerngross and Kast B848
Magnesium *o*-benzoyloxybenzoate; Preparation of ——. (P) Wildman, and Swan-Myers Co. B616
Magnesium bicarbonate solutions obtained by dissolving magnesium carbonate in water containing carbon dioxide under high pressure. Haehnel B786
Magnesium bisulphite digestion liquors for manufacture of cellulose; Preparation of ——. Schwalbe and Berndt B978
Magnesium carbonate; Calcining rocks containing calcium carbonate and ——. (P) Shaw and Bole B632
Solubility of —— in water containing carbon dioxide under high pressure. Haehnel B786
Thermal dissociation of ——. Manchot and Lorenz B744
Magnesium chloride; Dehydrating ——. (P) Wheat B633
dihydrate; Dehydration of ——. (P) Chem. Fabr. Griesheim-Elektron B121
dihydrate; Manufacture of ——. (P) Chem. Fabr. Griesheim-Elektron B295
Manufacture of ——:
(P) Bull, and A./S. de Norske Saltverker B712*
(P) Goldschmidt B422*
Manufacture of anhydrous ——:
(P) Collings and others.. .. .. B174
(P) Kali-Forschungs-Anstalt, and Friedrich B467, B747
The system water-potassium chloride ——. Keitel B54
The system water-sodium chloride ——. Keitel B54
Magnesium compounds; Recovery of —— from brines. (P) Judd and others B870
Magnesium formate; Decomposition of ——. Fischer and others B536
Magnesium hypochlorite; Basic ——. Lissner B786
Magnesium methyl chloride; Preparation of —— for the Grignard reaction. Schmalfuss B805
Magnesium nitrate; Production of —— from dolomite. (P) De Haën A.-G. B467

Magnesium oxide; Behaviour and properties of —— from different sources. Le Blanc and Richter B215
See also Magnesia.
Magnesium oxychloride cement. Olin and Peterson B830
Magnesium perchlorate trihydrate, and its use as a drying agent in steel and organic combustion analyses. Smith and others B202
Magnesium peroxide; Manufacture of ——. (P) Mau, and Erienwein und Holler B256
Magnesium salts of higher fatty acids; Relative solubilities of calcium salts and ——. Biltz and Röhrs B184
salts; Recovery of potassium salts and —— from natural brines and calcareous muds. (P) Silsbee B870
Magnesium sulphate; Kilns for calcining ——. (P) Akt.-Ges. f. Anilin-Fabr. B17
Reduction of ——. Althammer B745
-sodium sulphate-water; The system —— and a method of separating the salts. Archibald and Gale.. .. .. B827
Magnet steel. *See under* Steel.
Magnetic metal, permalloy; Reluctivity of the ——. Kennelly .. B560
separation of materials. (P) Krupp A.-G. Grusonwerk B602, B875, B875
separation of materials by means of roller or cylinder separators. (P) Krupp A.-G. Grusonwerke B717
separators. (P) Thompson and Davies.. .. .. .. B181
Maidan-i-Naftun; Crude oil of ——. Dunstan B362
Maize; Acidity of —— and its relation to vegetative vigour. Hurd B106
Apparatus for conditioning ——. (P) Nield B565, B719*
cob leaves; Manufacture of cellulose from ——. (P) Von Ordody B826
cobs; Economic aspect of production of furfural from ——. Mains and La Forge B445
Production of pentosan adhesives and furfural from ——. La Forge B274
endosperm; Phytosterols of ——. Anderson.. .. .. B691
plant; Elemental composition of the ——. Latshaw and Miller B763
silage. Woodman and Amos B885
stalk syrup; Production of ——. Williaman and others .. B686
Malic acid; Determination of —— in fruit syrups and other fruit products. Auerbach and Krüger B111
Polarimetric determination of ——. Auerbach and Krüger.. B32
Resolution of inactive —— into optically active forms. Dakin B445
l-Malic acid; Formation of —— in alcoholic fermentation by yeast. Dakin B843
Malole; Identity of ursone and ——. Van der Haar B996
Malt amylase ——. *See under* Amylase.
Application of biochemical method of characterising dextrose to detection of maltase in ——. Bridel B568
diastase. *See under* Diastase.
Dietetic value of —— as determined by its vitamin content. Southgate B958
Drying ovens for ——. (P) Pellegrino B994
extract; Manufacture of desiccated ——. (P) Rogers .. B110
extract; Vitamin content of ——. Stammers B349
flour and the practice of digestion of cooked and uncooked amylaceous substances. Lecoq and Wary B958
Influence of soluble starches of different origin on determination of diastatic power of ——. Lampe B145
Influence of temperature on optimum hydrogen-ion concentration for diastatic activity of ——. Olsen and Fine .. B992
Investigation of —— for vitamins B and C. Harden and Zilva B958
Vitrification and modification of ——. Petit B438
wine; Manufacture of ——. (P) Meessen.. .. .. B29
Maltase; Application of biochemical method of characterising dextrose to detection of —— in malt. Bridel B568
of yeast; Action of ——. Reversion synthesis. Pringsheim and Leibowitz B921
of yeast; Relative specificity of ——. Willstätter and others B649
Malted liquors; Dietetic value of —— as determined by their vitamin content. Southgate B958
Malting; Carbon dioxide rest method of ——. Lüers B347
floor; Mould on the ——. Raux B227
Maltose; Action of hydrogen peroxide and hypochlorous acid on ——. Craik 172T
Determination of —— in presence of other reducing sugars. Nottin B883
produced by decomposition of starch by malt extract; Rotation of the ——. Von Euler and Hellberg B957
Treatment of starch for production of ——. (P) Ling and Nanji B982
Manganate and permanganate ions; Equilibrium between ——. Schlesinger and Siems B940
Manganese in alloy steels. Vogel 368T
alloys and amalgams; Electrolytic formation of ——. Campbell B913
or its alloys; Manufacture of —— poor in carbon and silicon. (P) Kalling and others B182*
Association of —— with vitamins. McHargue B651
Critical studies on methods of determining —— in steel. Congdon and Neal, jun. B220
Detection of chromium in presence of ——. Chaborski .. B318
Determination of ——. Coltman B695
Determination of —— in ferrous materials rich in manganese. Tomarchio B560
Determination of —— in iron, steel, etc. Vernay B715

 Electrodeposition of ——. Allmand and Campbell B678
 Electrolytic production of ——. (P) Chem. Fabr. Griesheim-Elektron B523
 Interference of cobalt in bismuthate method for determination of ——. Lundell B37
 Micro-detection of ——. Feigl B236
 Production of —— by electrolysis of aqueous solutions of its salts. Fedotieff B10
 Simultaneous electrometric determination of iron and ——. Müller and Wahle B37, B317
 steel. *See under* Steel.
 Study of bismuthate method for determination of ——. Cunningham and Coltman B203
 in water ; Determination of —— by the sodium bismuthate method. Collins and Foster B652
Manganese carbide ; Formation of —— from manganese and carbon dioxide. Müller and Barck B55
Manganese carbonate ; Thermal dissociation of ——. Manchot and Lorenz B744
Manganese dioxide ; Action of —— in catalytic oxidation of carbon monoxide. Whitesell and Frazer B132
 anodes. (P) Hosenfeld, and Siemens und Halske B951
 Behaviour of sols of ferric hydroxide, humus, and —— towards carbonate, bicarbonate, and clay. Filluft .. B595
 Bromometric analysis of ——. Rupp and Siebler B466
 Manufacture of lead nitrate and hydrated ——. (P) Westling and Winship B788
Manganite ; Production of —— for use in manufacture of potassium permanganate. (P) Verein für Chem. u. Metall. Produktion B334
Manganous chloride ; Preparation of pure —— from chlorine residues. Smith B131
Manganous oxalate as a primary standard. Coltman B695
Manganous salts ; Titration of —— with permanganate. Kolthoff B1011
Mangold ; Thermostability of the peroxydase of the ——. Gallagher B346
Mangroves ; Indo-China ——. Heim and Cercelet B683
Mannan in wood cellulose. Heuser and Dammel B825
Mannitol ; Condensation of —— with olive oil. Irvine and Gilchrist B263
l-Mannose ; Preparation of ——. Levene B68, B437
Manuka oil. *See under* Oils, Essential.
Manure, stable- ; Action of —— in decomposition of cellulose in tilled soil. Barthel and Bengtsson B989
Manures ; Effect of fallow, dung and green —— in conjunction with mineral fertilisers. Haselhoff B606
 Factors operative in value of green ——. Lander and others B483
 Manufacture of artificial ——. (P) Gradl B143
 Manufacture of nitrogen-assimilating ——. (P) Jorgensen .. B27
 Residual effects of forty years' continuous treatment with ——. Effect of lime on decomposition of soil organic matter. White and Holben B990
 See also Fertilisers.
Manuring ; Influence of —— on baking properties of cereals. Neumann B305
 Lime-phosphoric acid factor in relation to the Aereboe-Wrangell system of ——. Günther B305
Maple products ; Lead number of ——. Clemens B650
Marble, artificial ; Manufacture of —— :
  (P) Clegg and Whittaker B983
  (P) Donzal B983
 Pulverisation of natural marble for preparation of artificial ——. (P) Westphal B384
Margarine ; Apparatus for manufacture of ——. (P) Maypole Margarine Works, and others B986
 Determination of chlorides in ——. Grossfeld B960
 Determination of fat in ——. Grossfeld B922
 Manufacture of ——. (P) Reynolds B922
Marine animal oils. *See under* Oils, Fatty.
Martensite ; Nature of ——. Bain B384
Masut ; Properties of Grosny ——. Tytschinin and others .. B1003
 Use of —— in blast furnaces. Perietzeanu B1014
Matte from blast-furnaces ; Treatment of ——. (P) Hickey .. B429
Mazout. *See* Masut.
Meat ; Chemical and biological observations on dried —— exported from La Plata. Bickel and Collazo B396
 extract ; Manufacture of preparations resembling —— from fish flesh. (P) Hildebrandt, and Chemical Foundation, Inc. B72
 extract and powder ; Manufacture of substances capable of replacing ——. (P) Marsan B309
 frozen ; Moulds on —— :
  Brooks 306T, B960
  Wright B110
 minced ; Value of Feder's ratio number for detection of adulteration of —— with water. Juckenack B570
 Moisture content of ——. Behre B488
 pastes ; Hydrogen electrode for use with ——. Monier-Williams B532
 Preserving —— and apparatus for treating air for use in the process. (P) Cuthbertson B689

Mercury compounds of purine derivatives. Rosenthaler and Abelmann B74
derivatives of hydroxysulphobenzoic acids and their homologues; Production of solutions of ——. (P) Chemosan A.-G. B927, B997*
Mesityl oxide: Preparation of ——. (P) Hoffman, and Alco Deo Co. B115
Mesquite beans; Chemical and structural study of ——. Walton B195
Messel memorial lecture; Second ——. Leverhulme 242T
medal; Presentation of —— 241T
Metal articles or materials; Composite ——. (P) Fink B300
articles subjected to heat treatment; Insulating substances for partial protection of ——. (P) Maier B874
baths; Electric fire-pot for heating ——. (P) Hadaway, jun. B680
-bearing residues; Treatment of ——. (P) Varlez .. B389
bodies; Strength and density of synthetic —— and forces of adhesion between metallic surfaces. Sauerwald and Jaenichen B636
cathodes; Preventing occlusion of hydrogen in ——. (P) Slepian, and Westinghouse Electric and Manuf. Co. B475
-coating baths; Method of treating ——. (P) Millring, and American Machine and Foundry Co. B793
coatings; Electrodeposition of —— on porous bases. (P) Pollak B985
dust; Manufacture of ——. (P) Alloys Co. B100*
to glass joint. Ridyard B359
hydrosols; Protected —— for medicinal use. Voigt .. B925
Muntz ——. *See under* Muntz.
Partition of a —— between two liquid metallic phases. Tammann and Schafmeister B873
powder; Manufacture of lamelliform —— particularly that having a lustre. (P) Podszus, and Hartstoff-Metall A.-G. B985
powders; Pyrophoric properties of ——. Tammann and Nikitin B716
sols; Production of ——:
Fürth B615
(P) Schornstein B314
spraying and sprayed metal. Turner and Ballard B874
systems; Application of ideal solubility curve to interpretation of equilibrium diagrams in ——. Andrews and Johnston B836
turnings, especially light metal turnings; Rendering —— non-inflammable. (P) Metallbank und Metallurgische Ges. B951
and vitreous material; Production of gas-tight seals between ——. (P) Reynolds, and Silica Synd. B423*
Metaldehyde; Stop device for burners for solid ——. (P) Elektrizitätswerk Lonza B367*
Metallic bodies; Production of synthetic —— by pressure or by sintering. Sauerwald B338
body; Composite refractory ——. (P) Yessler B475
coatings; Production of ——. (P) Schroeder B428
coatings on refractory materials; Production of ——. (P) Grönqvist B382
crystals; Etching of hollow ——. Gross and others .. B522
filaments; Method of drawing ——, and their properties and uses. Taylor B716
layers or fillings; Production of ——. (P) Meurer B301
materials; Heat-treating composite ——. (P) Harris, and Western Electric Co. B949
objects; Annealing ——. (P) Vitry B949
substances; Smelting or fusing ——. (P) Moldenke .. B914
surfaces; Production of protective coatings on etched ——. (P) Ges. für Technik B104
surfaces; Strength and density of synthetic metal bodies and forces of adhesion between ——. Sauerwald and Jaenichen B636
Metalliferous pulp; Treating ——. (P) Thayer B874
Metallisation of organisms. Zeliusky B20
Metallurgical analyses; Application of electrometric titration to ——. Shires B220
apparatus for treating liquids with gases. (P) Greenawalt .. B181
fume; Collection of ——. (P) Doremus and Grosvenor .. B679
Metallurgy; Considerations on theoretical ——. Equilibria between metal pairs and sulphur. Guertler and Schack B99
Metals; Action of acids on ——. Gans B560
Action of —— on nitric acid. Bancroft B827
of ammonium sulphide group; Determination of —— by means of hydrogen sulphide under pressure. Moser and Behr B618
of the ammonium sulphide group. Simplified qualitative analysis of ——. Rupp B235
Analytical methods for rare ——. Moore and others .. B620*
antifriction; Manufacture of ——. (P) Koehler B181
Apparatus for electrolysing fused salts of metals and recovering the —— and acid radicals. (P) Ashcroft B602
Apparatus for electrolytic deposition of ——. (P) Cleave .. B522
Apparatus for heat-treating ——:
(P) Kochendorfer, and Western Electric Co. .. B876*
(P) Kochendorfer and others B876*
Apparatus for treating —— in electric furnaces. (P) Bulley B301
Atomising fused ——. (P) Meurer B718*
Bearing ——:
(P) Adams, and General Electric Co. B221
(P) Borofski B389
(P) Müller and Sander B752
(P) Rempen B429
(P) Williams, and General Motors Research Corp. B1017
bearing-; Coarsely crystalline ——. Van Schwarz .. B136
bearing-; Hardening alloys for ——. (P) Evans B837
bearing-; Manufacture of ——. (P) Gerdts B680
bearing-; Rapid analysis of ——. Bartsch B873
Casting ——. (P) Egerton B428

PAGE

Metals—*continued.*
Catalytic ——. Piccard and Thomas B99
Cathodes for electrolytic refining of ——. (P) Schuh .. B21
Cleaning —— with alkaline solutions. Baker and Schneidewind B474
Cleaning —— by electrolysis. (P) Jascowitz and others .. B523*
Coating ——. (P) Weber B717
Coatings formed on corroded ——. Enos and Andersen .. B791
Coatings for metal moulds for casting ——. (P) Meloche .. B137
Consolidating the texture of layers formed by spraying of fluid or heated ——. (P) Meurer B428
Corrosive action of brackish water on ——. Perks .. 75T, B947
Crucible for heat treatment of ——. (P) Bellis and others B502
Crystal structure of —— and of mixed crystals and intermetallic compounds. Becker B100
Crystal structure of surface layer of worked ——. Thomassen B100
Degasifying agent for molten ——. (P) Scheuch, and Western Electric Co. B222
Detection of —— as double halides with pyridine, antipyrine, pyramidone, or aniline. Kolthoff and Hamer B968
Determination of coefficients of thermal expansion of some commercial ——. Friend and Vallance B337
Determination of density of refractory —— in the liquid state. Benedicks B1014
Die-casting ——. (P) Pack, and Doehler Die-Casting Co. B914
Diffusion in solid ——. Geiss and Van Liempt B835
Displacement of —— from solutions of their salts by less electropositive elements. Bergstrom B132
Drawing, rolling, and wire-drawing ——. (P) De Dudzeele B717
Effect of free surfaces on plastic deformation of certain ——. Thompson and Millington B836
Effect of severe cold working of —— on scratch and Brinell hardness. Rawdon and Mutchler B260
Effects of temperature on properties of ——. Mallock .. B220
Elasticity of ——. Geiss B99
Electrodeposition of ——. (P) Eustis and Perin B301
Electrolysis of fused salts of metals and recovery of the acid radicals and ——, and application to the recovery of valuable constituents from metal-bearing ores and materials. (P) Ashcroft B180
Equilibria between pairs of —— and sulphur. Guertler and Schack B99
Experiments on Brinell hardness-tensile strength relationship in ——. Norbury and Samuel B521
Explanation of cold working of ——. Geiss and Van Liempt B600
Extraction of ——. (P) Hanelau B522
Fibre structure of electrodeposited ——. Glocker and Kaupp B948
Furnaces for melting and casting ——. (P) Benjamin .. B601
Fused eutectic salt bath for heat treatment of ——. (P) Bellis, and Bellis Heat Treating Co. B502
Gaseous fuel for cutting and welding ——. (P) Rose and Harris B8
having a high melting point; Electrical process for obtaining ——. (P) Soc. Anon. des Brevets Berthet B523*
Heat conductivity of technically important ——. Jakob .. B913
Heat-treatment of —— and furnace therefor. (P) Bellis Heat Treating Co. B874
Heating —— in an electric furnace. (P) Kalling and others B339
of high melting point; Treatment of ——. (P) N. V. Hollandsche Tungstendraadfabr. B679
Hot-gas process for reduction and smelting of ——. (P) Fleischer, and Chemical Foundation B428
Impact elasticity of ——. Welter B260
Indentation hardness of ——. Honda and Takahasi B521
Manufacture of ductile bodies of —— of high fusing point. (P) Aoyagi B718*
Manufacture of material for coating moulds for casting ——. (P) Vedova B875
Measurement of resistance opposed by —— to rapid deformation. Application to measurement of pressures developed by combustion of propellants in closed vessels. Burlot B315
Measurement of specific heats of —— at high temperatures. Smith and Bockstahler B984
Melting of ——. (P) Nordiske Mekaniska Vaerksteder A./S. B181
Melting or smelting low-volatile ——. (P) Gray B340
Method of reducing ——. (P) Hamilton and Evans B522
molten; Apparatus for heat treatment of materials by means of ——. (P) Thermal Industrial and Chemical (T.I.C.) Research Co., and Rider B735
molten; Use of —— for heating liquids. (P) Thermal Industrial and Chemical (T.I.C.) Research Co., and others .. B735
Morphology of the solid reaction layers on ——. Kohlschütter and Krähenbühl B179
non-ferrous; Oxidising fluxes in melting of ——. Portevin .. B474
Non-metallic inclusions in ——. Lobley B473
Passivity of ——. Müller B912
Periodic dissolution of —— in certain reagents. Hedges and Myers B387
poor in carbon and silicon; Manufacture of ——. (P) Kalling and others B523*
Potential series of the —— in fused chlorides. Tammann .. B562
precious; Advances in methods of refining alloys of ——. Eger B337
precious; Centrifugal separator for recovering ——. (P) West and others B718
precious; Preparation of sulphur-containing ores for extraction of ——. (P) Soc. Metalurgica Chilena "Cuprum" .. B429
precious; Recovering —— from alluvial concentrates. (P) Marsh B562
precious; Recovering —— from cyanide solutions. (P) Lawry B950
Precipitation of —— from their solutions. (P) Bardt B339
Preparation of ores and metallurgical products for treatment for recovery of ——. (P) Soc. Metalurgica Chilena "Cuprum" B951

PAGE

Metals—*continued.*
Preparing —— for coating. (P) Gravell .. B793
produced from their organometallic derivatives; Fixation of unsaturated molecules by ——. Job and Reich .. B137
Production of glossy metallic coatings on ——. (P) Classen .. B476*
Production of single crystals of ——. Obreimow and Schubnikow B874
Production of vitreous coatings on ——. (P) Crossley .. B675
Purification of crude —— and separation of metals and alloys. (P) Skappel .. B389
rare; Determination of —— and their separation from other metals. Moser .. B80
rare earth; Coating —— and their alloys with other metals. (P) Kunheim und Co. .. B523
rare; Extraction of —— from ores. (P) Halo .. B679
Recovery of —— from their ores:
(P) Hirschkind, and International Precipitation Co. B181
(P) Welch, and International Precipitation Co. .. B428
Recovery of —— from solutions:
(P) Becket, and Union Carbide and Carbon Research Laboratories .. B523
(P) Becket and others .. B523
Recovery of —— from sulphides. (P) Sem, and Norske Aktieselskab for Elektrokem Ind. .. B138*
Recovery of volatile —— from ores. (P) Roitzheim .. B679
Refining ——. (P) Harris .. B679
refractory; Manufacture of wire, ribbon or the like of ——. (P) Patent Treuhand Ges. für Elektrische Glühlampen, and General Electric Co. .. B875
Relation between polarisation and structure in electrodeposition of ——. Kohlschütter .. B300
Relation between tarnishing and corrosion of ——. Evans .. B913
Scientific and technical methods of measuring hardness of ——. Plaut .. B180
Separation of —— by precipitation with calcium carbonate and calcium hydroxide. Schopper .. B178
and their single solid solutions; Relationship between tensile strength, temperature, and cold-work in some pure ——. Ingall .. B836
Slag inclusions in relation to fatigue of ——. Haigh .. B473
Smelting ores of low-volatile —— and melting such metals. (P) Gray .. B181
Structure of electrodeposited ——. Audubert .. B984
Structure of native ——. Oebbeke and Von Schwarz .. B136
Sulphurising and desulphurising of —— by basic slags and fluxes. Bogitch .. B474
Testing the hardness of ——. (P) Herbert .. B320
Treating —— to prevent rusting. (P) Green, and Parker Rust-Proof Co. .. B475
Treating solutions of ——. (P) Clark .. B875
Treatment of —— to render them harder and rust-proof. (P) Reis .. B601
Uniting ——:
(P) Austin .. B1018
(P) Kasley, and Metropolitan Vickers Electrical Co. .. B522
for use in handling acetone and methyl alcohol. Remler .. B446
Utilisation of coal dust in smelting and refining ——. (P) Krupp A.-G. Grusonwerk .. B262
Vacuum refining of ——. (P) Wetzel .. B984
Variation of hardness of —— with the temperature. Sauerwald B836
Volatilisation of ——. (P) Wigton and Seddon .. B985
Metanilic acid; Electrolytic preparation of —— and its commercial possibilities. Doolittle .. B288
Metaphosphates. Pascal .. B131
Insoluble alkali ——. Pascal .. B172
Number of insoluble alkali ——. Pascal .. B510
Methane-air mixtures; Influence of some non-inflammable vapours of organic liquids on limits of inflammability of ——:
Jorissen and Meuwissen .. B1001
Jorissen and Velisek .. B207
as an anæsthetic. Brown .. B889
Catalytic production of ——. (P) Badische Anilin und Soda Fabr. .. B502
Chlorination of ——. (P) Holzverkohlungs-Ind. A.-G. B34, B848
Combustion of —— to formaldehyde. Tropsch and Roelen .. B232
Determination of —— in producer gas. Nielsen .. B586
Formation of —— from sewage sludge. Bach and Sierp .. B275
Manufacture of ——. (P) Meister, Lucius, und Brüning B83, B848
Manufacture of —— from water-gas. (P) Badische Anilin und Soda Fabrik .. B859
Preparation of bromo-derivatives of ——. (P) Elektrochem. Werke, and others .. B811
Production of gas mixtures rich in ——. (P) Bayer und Co. B502
Synthesis of —— and removal of carbon monoxide from water-gas and coal-gas. South Metropolitan Gas Co. .. B660
Thermal decomposition of ——. Cantelo .. B931
Methyl alcohol; Detection of ——. Sumner .. B204
Detection of —— in ethyl alcohol:
La Wall .. B110
Winkler .. B959
Detection of —— in presence of ethyl alcohol. Kling and Lassieur .. B438
Determination and separation of ——. Fischer and Schmidt .. B446
Disturbing effect of glycerol in detection of —— in ethyl alcohol. La Wall .. B438
Effect of —— on growth of barley plants. Purl .. B1022
Interaction of —— with fused caustic alkalis. Fry and others .. B979
Metals for use in handling ——. Remler .. B446
Methyl ethyl ketone; Purification of —— by sodium iodide. Lochte B925
Methyl ethyl sulphate as alkylating agent. Thayer .. B536
Methyl propyl ketone; Determination of diethyl ketone and —— in mixtures. Pringsheim and Gorgas .. B925
Methyl salicylate glucoside present in the fresh bark of *Betula lenta*; True nature of the ——. Bridel .. B924

PAGE

Methylamine; Preparation of ——. Sommelet .. B199
Methyl-p-aminophenol; Preparation of —— and of compounds thereof. (P) Thelmer and Steward .. B732
β-Methylanthraquinone; Derivatives of ——. Synthesis of Frangula emodin. Eder and Widmer .. B113
Nitro-derivatives of —— and some of their transformation products. Eder and others .. B368
Methylarsinic acid; Preparation of a calcium salt of ——. (P) Sächsisches Serumwerk A.-G. .. B849
2-Methyl-4-diethylaminopentanol-5; Preparation of p-aminobenzoyl derivatives of ——. (P) Chem. Fabr. Flora .. B615
2-Methyl-4-dimethylaminopentanol-5: Preparation of p-aminobenzoyl derivatives of ——. (P) Chem. Fabr. Flora .. B615
Methylglucoside; Synthetic fat from olive oil and ——. Irvine and Gilchrist .. B263
β-Methylglucoside; Preparation of ——. Schlubach and Maurer .. B963
Methylglucosides. Behaviour of α- and β- —— towards taka-invertase. Hattori .. B761
Methylhydrastimide; Preparation of double salts of yohimbine and ——. (P) Fleischer and Hirsch-Tabor .. B314
α-Methylnaphthalene-4-sulphinic acid. Elbs and Christ .. B504
α-Methylnaphthalenesulphonic acids. Elbs and Christ .. B504
4-Methyl-α-naphthol. Elbs and Christ .. B504
Methylphenacetin; Preparation of ——. (P) Thelmer and Steward B153, B732
4-Methylthio-α-naphthol. Elbs and Christ .. B504
Micro-analysis; Application of —— to coal research. Dolch and Strebinger .. B931
Application of —— to combustion of diamond. Nicloux and Guillemet .. B419
and its application to wine analysis. Malvezin .. B193
by Pregl's method. Von Szent-Györgyi .. B620
Qualitative ——. Feigl .. B236
Use of ammoniacal silver solutions in qualitative ——. Denigès B968
Micro-calorimeter. Roth and others .. B928
Use of compensating —— for measurement of small heat intensities. Tian .. B319
Microchemical separations; Use of filter-rods in quantitative ——. Benedetti-Pichler .. B892
technique; Gravimetric ——. Dienes .. B851
Micro-combustion bomb. Roth and others .. B928
Micro-gas analysis; New method of ——. Reeve .. B928
Micro-incineration; Method of —— applicable to histochemical research. Policard .. B80
Micro-Kjeldahl method; Direct-nesslerisation ——. Koch and McMeekin .. B854
Micro-melting point apparatus. Clevenger .. B813
Micro-organisms; Intramolecular respiration of —— Bieling .. B272
Preservation of stock cultures of ——. Thaysen .. B485
Preserving ——. Truche .. B761
Separation of —— from liquids. (P) Henneberg .. B147
Milk; Action of rennet and of heat on ——. Wright .. B348
adulteration; Combined —— and its calculation. Scholler .. B570
analysis apparatus; Modification of Babcock's ——. Pozzi-Escot .. B194
Analysis of coagulated ——. Bance .. B70
analysis; Report on standard methods of bacteriological —— B613
Apparatus for concentrating ——. (P) Peebles .. B489
Apparatus for preparation of condensed ——. (P) Burt and others .. B490
Apparatus for sterilising ——. (P) Turner, and Electropure Corp. .. B196
Behaviour of calcium, potassium, chloride, and phosphorus in —— and technique of ultra-filtration. Wha .. B308
Cholesterol content of human ——. Fox and Gardner .. B348
Coagulating ——. (P) Kohman and others .. B149
-coagulating enzyme of *Solanum elæagnifolium* berries. Bodansky .. B960
Comparison of Roese-Gottlieb and Babcock methods of determining fat in ——. Dahlberg .. B70
Dehydrating ——. (P) Benjamin .. B1027
Detection of 5% of added water in ——. Fonzes-Diacon .. B487
Detection of addition of alkali to —— by titrating the phosphate in the ash. Gahritz .. B194
Detection of nitrates in ——, and value of this test in the detection of adulteration with water. Pozzi-Escot .. B228
Determination of boric acid in ——. Liverseege and Bagnall .. B349
Determination of fat in —— by a modified Babcock method. Pozzi-Escot .. B30
Determination of fat in sour ——. Baumann .. B110
Determination of freezing point of ——. Bolm .. B1025
Distribution of calcium and inorganic phosphorus in ——. György .. B30
Drying ——. (P) Peebles, and Western Condensing Co. B533
Dust explosion in a spray dryer for ——. Noel .. B844
Effect of heat treatment of —— on mineral metabolism of infants. Daniels and Stearns .. B844
Electrometric determination of hydrogen-ion concentration in ——. Rice and Rider .. B994
Evaporating apparatus for ——. (P) Petersen .. B440
Experimental feeding of dried breast ——. Smith .. B1026
Extracting oil from ——. (P) North and others .. B397
Extracting oil or fat from ——. (P) North, and Milk Oil Corp. .. B350*
foods; Manufacture of ——. (P) Gates .. B572
goat's; Detection of —— after heating or boiling. Austen B650

PAGE

Milk—*continued.*
having a low bacterial content; Types of bacteria in ——. Sadler and others B1026
Heat treatment of —— for sterilisation and other purposes. (P) Rafn B962
Impoverishment of —— in carbon dioxide by the usual pasteurisation in air. Advantage of treatment in a closed system. Stassano B763
Increase of density as a criterion of skimmed ——. Reiss .. B488
Influence of bactericidal power of raw —— on lactic organisms in sterilised milk. Mazé B488
Influence of colloids in the reductase test of ——. Virtanen B960
Machine for treating ——. (P) Mabee B490
Manufacture of artificial ——. (P) North, and Milk Oil Corp. B71
Manufacture of beverages from soured ——. (P) Rettger and Chaplin B1027
Manufacture of a food product from skim —. (P) Rogers .. B149
Manufacture of modified ——. (P) Grindrod, and Carnation Milk Products Co. B994
Method of treating powdered ——. (P) Metallbank und Metallurgische Ges., and Tillmans B490
Micro-methods for determination of fat in ——. Kurz .. B228
and milk products; Active chlorine as a germicide for ——. Hale and Bleecker B308
Nitrite-oxidising mechanism of ——. Haas and Lee .. B803
oil: Condensed ——. (P) North, and Milk Oil Corp. .. B690
or other liquids; Pasteurising ——. (P) Shepheard .. B764*
powder; Antiscorbutic potency of whole- ——. Cavanaugh and others B960
powder; Determination of fat, lactose, and moisture in ——. Jephcott B30
powder Determination of solubility of ——. Lampitt and Hughes B488
powder; Drying ——. (P) Merrell and Merrell-Soule Co. B230
powders; Citric acid content of ——. Stewart B960
Preparation of imperishable ——. (P) North, and Milk Oil Corp. B1027
Preparation and properties of xanthine oxydase of ——. Dixon and Thurlow B960
Process of obtaining oil from ——. (P) North B71
Production of reconstructed ——. (P) North, and Milk Oil Corp. B690
proteins; Nutritive value of —— from standpoint of reproduction. Sure B309
Rapid detection of sucrose in ——. Pozzi-Escot B228
Rate of separation of emulsions such as ——. Sakurai B763, B1026
Reducing and oxidising reactions of ——:
Haas and Hill B194
Haas and Lee B725
separators; Centrifugal ——. (P) Karplusky and Anderson B885
serum; Separation of proteins of —— by the acetone method. Piettre B194
Sterilising ——. (P) Tatham and Nicolls B111
Tables for testing "equivalents pints" declaration for condensed ——. Essery B488
test bottles; Use of waste alcohol in the calibration of Babcock ——. Theron and Cutler B884
Treatment of ——. (P) Peterson B803
Treatment of —— and of milk products. (P) Grindrod, and Carnation Milk Products Co. B803
Treatment of skimmed or soured —— or buttermilk for separation of calcium caseinate (soluble casein) or casein. (P) Marston B533
Trimyristin, a glyceride present in ——. Piettre and Roeland B725
Volumetric determination of chlorine in ——. Zaribnicky B308
Xanthine oxydase of ——. Dynamics of the oxydase system. Dixon and Thurlow B960
Xanthine oxydase of ——. Reduction of nitrates. Dixon and Thurlow B960
Milletia taiwaniana, Hayata; Constituents of ——. Kariyone and others B31
Mimusops hexandra seeds; Fatty oil of ——. Patel B795
Mineral blue. Vanino and Engert B391
materials: Treatment of crystalline —— to improve their bonding properties. (P) Hartmann, and Carborundum Co. B295*
oils. *See under* Oils, Hydrocarbon.
Minerals containing carbonates; Increasing the fineness of ——. (P) Reitmair B746
Plant for washing ——. (P) France B42*
Separating and purifying ——. (P) Richards .. . B557
Upward-current washing plant for ——. (P) France .. B360
See also Ores.
Mirror fragments; Desilvering —— (P) Sternberg .. B468, B911
of silicon; Production of a ——. (P) Siemens u. Halske A.-G. B788
Mirrors; Production of copper —— on glass. (P) Chem. Werke vorm. Auerges., and Volmer B514
Miscibility; Contribution to study of ——. Determination of critical solution temperatures. Cherchelfsky .. B319
temperature of liquids; Determination of ——. Rosset .. B579
temperatures; Application of —— to examination of cacao butter and identification of certain products. Rosset and others B70
Mistletoe; Chemistry of ——. Einleger and others B574
Mixing apparatus:
(P) Low, and Low Engineering Co. B42*
(P) Veitch B497
apparatus for liquids. (P) Chem. Fabr. Griesheim-Elektron B737
apparatus for liquids and solids. Moritz B773

apparatus; Turbine-like ——. (P) Chem. Fabr. Griesheim-Elektron B283
and discharging solutions; Machine for ——. (P) Jones .. B150
incorporating, and disintegrating machines. (P) Hurrell B542, B584*
and like machines. (P) Seaman, and Brinjes and Goodwin, Ltd. B3, B160*
liquids; Apparatus for ——. (P) Butler B238
mills. (P) Seaman, and Brinjes and Goodwin, Ltd. ..
of two or more substances owing to leaks in the walls or partitions of the containing vessels; Preventing ——. (P) Van der Hoeven B584, B931*
Mixtures; Process for making homogeneous liquid ——. (P) Riedel A.-G. B159
Production of mechanical ——. (P) Wittenstein B82
Modeccin; Protein phytotoxins, with special reference to ——. Green and Kamerman B491
Moellon; Analysis of ——. Last B918
Moisture; Removal of —— from substances by centrifugal means. (P) Elmore and Comley B657
Mojonnier tester; Routine examination of dairy products with the ——. Lampitt and others B884
Molasses; Action of sulphuric acid on vinasses from distillation of ——. Kronacker B691
Alcohol from cane ——. Effect of varying additions of acid. Owen and Bond B438
Application of —— as fertiliser to cane soils in Mauritius. Tempany and Giraud B66
Burner for utilising —— as fuel. (P) Hildebrandt, and Black-Strap Fuel and Potash Products Co. B121
Cause of low yield of alcohol on fermentation of ——. Gupta and others 201T, B959
Clarification of —— with basic lead nitrate. Dorfmüller .. B437
Clarifying and purifying —— for manufacture of compressed yeast. (P) Batist and others B486
Colloids of ——. Farnell B647
Comparative experiments on direct polarisation of ——. Kunz B608
Determination of ash content of ——. Pachlopnik B760
Determination of grain in Java ——. Waterman and Visser B306
Determination of true dry substance content of beet ——. Gustavson and Pierce B271
Difference between direct and double polarisations of beet ——. Saillard B685
Exhaustion of final cane —— at 92°—94° Brix. Hinds .. B685
Hot saccharate process of extracting sugar from beet ——. Shafor B723
Occurrence of substances hindering inversion in ——. Erdenbrecher B107
Pectin and pentosan content of cane ——, and its removal. Farnell B920
Preliminary treatment of —— for use in manufacture of yeast. (P) Hamburger and Kaesz B844
Production of butyl alcohol and acetone by fermentation of ——. (P) Robinson, and Atlas Powder Co. .. B1025
Raffinose content of ——. Saillard B686
Recovery of nitrogen compounds and acetone from ——. (P) Synd. d'Etudes Chim. B802
Recovery of sugar from cane. —— (P) Deguide B802
Recovery of sugar from —— *by the Friedrich and Rajtora* process. Saillard B991
Refining ——. (P) Cutler, and United States Syrup Co. .. B609
Results given by different modifications of double polarisation method of determining sucrose in cane ——. Woods .. B530
Validity of Geerligs' theory of formation of ——. Formation of compounds between sugars and salts:
Helderman B647
Kolthoff B647
Molybdates; Manufacture of ——. (P) Kissock B746
Molybdenum in alloy steels. Vogel 368T
alloys; Binary and ternary ——. Dreibholz B300
Analytical methods for ——. Moore and others B620*
-chromium alloys with and without copper. Siedschlag .. B179
-copper alloys. (P) Norske Molybdenprodukter A./S. .. B138
Critical studies on methods of determining ——. Congdon and Rohner B317
Determination of small quantities of ——. Vila .. B37, B203
in ores, alloys, etc.: Technical determination of ——. Binder B221
Thermal expansion of ——. Hidnert and Gero B751
Molybdenum compounds free from alumina and zinc; Extraction of ——. (P) Carus B421
Molybdic acid; Separation of tungstic acid and ——. Koppel .. B1030
Monel metal; Corrosion of —— in photographic solutions. Crabtree and Matthews B733
Monoalkylpulegones; Preparation of ——. Haller and Ramart .. B731
a-Monoamino-acids; Microchemical identification of ——. Werner B204
Monoarylantimony compounds; Preparation of ——. (P) Chem. Fabr. von Heyden B810
Monoazo dyestuffs. *See under* Azo dyestuffs
Monochloroamine, the amide of hypochlorous acid. Raschig .. B744
Monochloro-1-ketotetrahydronaphthalene; Preparation of ——. (P) Tetralin Ges., and Hiebensahm B355
a-Monoglycerides of fatty acids of high molecular wight. Bergmann and Sabetay B681
Monomethylaniline 2.6-naphthalenedisulphonate. Forster and Keyworth 168T

Mononitrophenol ethers and their halogen substitution products; Manufacture of ——. (P) Matter B591
Monosaccharides; The α- and β-forms of some ——. Svanberg and Josephson B271
Monosodium phosphate; Manufacture of ——. (P) Glaeser .. B829
Montan wax; Behaviour of —— on dry distillation. Marcusson .. B162
Coloured constituents of ——. Smelkus B624
Formation of ceresin hydrocarbons from ——. Origin of petroleum. Marcusson B660
Preparation of resins and waxes from crude ——. (P) Jena .. B641
Removing resinous constituents from, and purifying ——. (P) Nathanson B327
wax and similar bituminous substances; Isolation of ——. (P) Ginti and Müller B366
or its transformation products; Preparation of ——. (P) Meister, Lucius, and Brüning B589
Monte-jus; Automatic ——. (P) Howard and others B544
Moore spontaneous ignition meter; Studies with the ——. Ormandy and Craven B700
Mordanting animal fibres with mineral substances. Elöd B939
and dyeing wool. (P) Telen, and Du Pont de Nemours and Co. B508
wool with chromium compounds. Cross and King B1009
Mordants; Cheap chrome ——. Richard B507
Effect of hydrogen-ion concentration on compound formation and adsorption of dyestuffs by ——. Marker and Gordon B1010
Preparation of non-dyeing condensation products of aromatic series containing sulphur for use as ——. (P) Meister, Lucius, u. Brüning B785
Morphine; Constitution of ——. Fallis and Sappan B351
series; Preparation of keto-derivatives of the ——. (P) Knoll u. Co. B402
Mortar; Cement ——. *See under* Cement.
Composition for colouring ——. (P) Master Builders' Co. .. B714
-forming material; Manufacture of cement-like ——. (P) Becker B832
Inadequate hardening of lime ——. Nussbaum B517
Influence of method of preparing trass-lime —— on its density and strength. Burchartz B517
and the like; Manufacture of material for forming ——. (P) Riedel A.-G. B297
Production of coloured hydraulic ——. (P) Brandt B384
Mosquito larvæ and the like; Product for destroying ——. (P) Roubaud and Veillon B804
Moth-repellent animal fibres. (P) Turner, and Pathé Chemical Co. B553
Mother-of-pearl. *See under* Pearl.
Moths; Impregnating clothes and the like as a protection from ——. (P) Naefe B212
Motor fuel; Tetralin as ——. Nathan B897
fuels:
(P) Backhaus, and U.S. Industrial Alcohol Co. .. B47
(P) Dolfen and Hostettler B1005
(P) Dunning B626
(P) Keyes, and U.S. Industrial Alcohol Co. B665
(P) McKee B626
(P) Midgley, jun., and General Motors Research Corp. B503
(P) Morgan B551*
(P) Ricardo B780*
(P) Schreiber, and U.S. Industrial Alcohol Co. .. B9*
(P) Taber and Essex B626
(P) White B822
fuels composed of mixtures of alcohol and heavy petrol; Bench experiments on ——. Watson and Ormandy B856
fuels; Equilibrium boiling-point and latent heat of vaporisation of ——. Ormandy and Craven B6
fuels; Low-temperature tar oils as ——. Häusser and Ellerbusch B776
fuels; Lowering of boiling point in some mixed ——. Mylrvang B739
fuels; Manufacture of ——:
(P) Annaratone B1005
(P) Kelley and Kerr B210
(P) Schrauth B704
fuels; Manufacture of alcohol-ether ——. (P) Lichtenthaeler B411*
fuels; Studies on —— with the Moore spontaneous ignition meter. Ormandy and Craven B700
fuels; Weighted index number for volatility of ——. Gruse .. B44
spirit:
(P) Alexander B210
(P) Diamond B124
spirit; Influence of construction of revolving retorts on composition of —— from low-temperature carbonisation of coal. Hoffmann B897
spirit; Process for making homogeneous ——. (P) Riedel A.-G. B159
spirit; Refining —— by means of silica gel. Williams 109T
spirit; Treatment of cracked ——. (P) Remfry B459
Moulds for casting metals; Coatings for metal ——. (P) Meloche B137
for casting metals; Manufacture of material for coating ——. (P) Vedova B875
for steel castings; Composition for ——. (P) Robinson and Gray, jun. B522
Moulds on frozen meat:
Brooks 306T, B960
Wright B110
Mucin-dissolving agent for dentifrices and the like. (P) Vogt and others B35
Muffle furnaces. *See under* Furnaces.
Muntz metal; Corrosion of —— in sea water. Donovan and Perks 72T B947
Musks; Artificial ——. Battegay and Kappeler B847
PAGE
Mustard; Composition of commercial mustard bran, with special reference to detection of added mustard bran in prepared ——. Hertwig and Palmore B70
Determination of allyl isothiocyanate in ——. Morvillez and Meesemaecker B922
flour and oil as preservatives for wines and foodstuffs. Delage B69
oil. *See* Allyl isothiocyanate *and also under* Oils, Essential
Myrobalans; Characters of Indian ——. B880
Myrtaceæ; Stearoptene occurring in some essential oils of the ——. Penfold and Morrison B576
Myrtle; Essential oil of grey or "scrub" ——. Penfold B576

N

Naphtha, solvent-; Polymerisation of ——. Kattwinkel B125
Naphthalene; Analysis of naphthalenesulphonic acids and ——. Calcott and others B1007
in coal gas. Lupton B207
and its deposition from coal gas. Ineson B83
Determination of ——. Calcott and others B166
Disulphonation of ——. Fierz-David and Hasler B87
Effect of indene on determination of —— in coke-oven gas and coal gas by picric acid:
Brown and Berger B856
Colman and Yeoman B1001
Experiences with extraction of —— from coal gas. Richardson B5
Production of colloidal dispersions of —— for spraying seeds and plants etc. (P) Plauson's Forschungsinst. B398
Purification of ——. (P) Gould, and Barrett Co. .. B328, B590*
Removal of —— from gas by oil scrubbing. Pike and West .. B361
Removing —— from distillation gases. (P) Krieger B366
Solubility and vapour pressure of —— in relation to benzol recovery. Bunte and Pippig B5
Naphthalenedisulphonic acids; Arylamine salts of 2.6- and 2.7- ——. Forster and Keyworth 165T, B936
Quantitative determination of 2.6- and 2.7- ——. Haller and Lynch B367
Separation of 2.6- and 2.7- ——. Forster and Keyworth .. 167T
Naphthalenesulphonic acids; Analysis of ——. Calcott and others B166, B1007
Arylamine salts of α- and β- ——. Forster and Keyworth 290T, B936
Errata 314T
Separation of mixtures of α-and β- ——. Forster and Keyworth 303T
Naphthalic acid; Preparation of —— by oxidation of acenaphthaquinone. Whiston 370T
Naphthaquinone derivatives. (P) Soc. Anon. Mat. Col. et Prod. Chim. de St. Denis, and others B902
Naphthasulphonic acids; Preparation of alkali salts of ——. (P) Oelwerke Stern-Sonneborn A.-G. B411
Naphthenes; Determination of —— in petroleum spirit. Ormandy and Craven B363
Naphthenic acids; Chemical nature of ——:
Aschan B458
Zelinsky B243
Zelinsky and Pokrowskaja B243
from Kubiki (Japan) kerosene distillate. Tanaka and Nagai .. B121
Metal salts of ——. Tanaka and others B243
Purification of ——. (P) Schrauth B460
Naphthidine; Manufacture of a dyestuff from ——. (P) Comp. Nat. de Matières Colorantes et Prod. Chim. B862
α-Naphthol; Catalytic reduction of —— under high pressure. Inoue B504
Preparation of carbonyl derivatives of ——. (P) Soc. of Chem. Ind. in Basle B10*
β-Naphthol; Detecting small quantities of α-naphthol in ——. Driver 206T, B666
Naphthol A S. *See* 2.3-Hydroxynaphthoic acid anilide.
α-Naphtholaurin. *See under* Triarylmethane dyestuffs.
2.3.6-Naphtholdisulphonic acid; Manufacture of ——. (P) Masters B247
2.6.8-Naphtholdisulphonic acid; Manufacture of ——:
Kawaguchi B504
(P) Masters B247
Naphthols; Distinguishing α- and β- ——. Driver .. 206T, B666
Naphtholsulphonic acids; Separation of ——. (P) Berlin and others B552
Naphthothioindoxyls; Manufacture of ——. (P) Soc. of Chem. Ind. in Basle B591, B741*
Naphthylamine salts of α- and β-naphthalenesulphonic acids; The α- and β- ——. Forster and Keyworth 300T
Naphthylaminedisulphonic acids; The 2.5.7- and 2.6.8- ——. Fierz-David and Braunschweig B87
2.7-Naphthylaminesulphonic acid; Preparation of ——. (P) Wait B583
Naphthylamines; Benzenemonosulphonates of the ——. Keyworth 341T
The 2.6- and 2.7-naphthalenedisulphonates of α- and β- ——. Forster and Keyworth 166T, 167T
Neoarsphenamine. *See* Neosalvarsan.
Neocain; Comparative toxicity of novocain, procain, apothesine, and ——. Meeker and Frazer B276
Neomenthol; Isomerism of menthol and ——. Vavon and Condere B889
Neosalvarsan; Biological standardisation of ——. Roth B767
Determination of total sulphur in ——. Elvove B767
solutions; Osmotic pressure of ——. Johnston B767

(P) Klam and Collins B561
alloys; Thermo-electric researches on ——. Rohn B835
anodes. Thomas and Blum B473
catalyst for hydrogenation of oils; Manufacture of ——. (P) Byers, and Brown Co. B23
catalyst; Preparation of a —— and its reduction activity. Lietz B795
catalysts; Influence of oxygen and of water on —— and variation of activity with temperature of reduction. Kelber B276
catalysts; Poisoning of —— in hydrogenation of cinnamic acid. Wolff B574
-chromium alloys; Magnetisation of ——. Safranek B220, B385
-chromium-copper alloys. Siedschlag B179
and cobalt-nickel ores; Recovering values of ——. (P) Caron, and Clevenger and Caron B429
Compounds of quadrivalent —— with dimethylglyoxime, and a sensitive test for nickel. Feigl B540
-copper alloys; Hardness of mixed crystals of —— at temperatures up to the melting point. Sauerwald and Knehans .. B179
-copper catalysts; Dehydrogenating action of ——. Kita and others B755
-copper-lead alloys. Guertler and Menzel B250
Critical studies on methods of determining ——. Coogdon and Belge B236
depositing solutions; Conductivity of ——. Hammond .. B473
depositing solutions; Determination of fluorine in ——. Hammond B873
deposition; Throwing power, cathode potentials, and efficiencies in ——. Haring B912
Detection of ——. Wallach and Weissenborn B447
Detection of cobalt and —— separately and in presence of one another. Palit B540
Detection and determination of —— as hexamminenickelous perchlorate. Neusser B453
Determination of —— by means of dimethylglyoxime in presence of iron and cobalt. Weeldenburg B969
Determination of —— in ores and alloys by means of dimethylglyoxime. Weeldenburg B716
Dimethylglyoxime reaction of —— by reflected illumination. Kirschner.. .. .. B236
Electrometric titration of —— with potassium cyanide. Müller and Schluttig B772
Hardness of electro-deposited ——. Macnaughtan B519
Hydrogenation with —— in absence of oxygen. Kelber .. B276
Introduction of carbonaceous matter in electro-deposited ——. Frölich B912
-iron alloy; Forgeable ——. (P) Yensen, and Westinghouse Electric and Manufacturing Co. B221
-iron alloys; Hardness of ——. Schottky B600
-iron alloys; Hardness of mixed crystals of —— at temperatures up to the melting point. Sauerwald and Knehans B179
-iron-aluminium alloy stable to heat; Non-rusting ——. (P) Reissman B262
Manufacture of ingots of pure —— from impure oxides. (P) Lamothe B181
Mechanically perfect electrolytic ——. Madsen B520
Micro-analytical determination of copper and —— in presence of each other. Strebinger and Pollak B969
Micro-determination of ——. Pollak B851
plating. (P) Baker and Girl B837
plating baths; Use of oxygen electrode in determining acidity of ——. Montillon and Cassel B98
plating solutions; Determination of boric acid in ——. (P) Baker and Girl B837
Preparation of finely-divided ——. (P) Sieck, jun., and Sieck and Drucker, Inc. B3
Quantitative separation of very small quantities of copper, zinc, cobalt, and —— from a complex mixture. Bertrand and Mokragnatz B79
Recovery of —— from hydrated nickel silicates. (P) Hissink .. B914
Recrystallisation of γ-iron in comparison with copper and ——. Schottky and Jungbluth B634
Reduction of thin films of oxide on ——. Tammann and Masals B600
Separation of iron, copper, zinc, arsenic, and —— by precipitation with calcium carbonate and hydroxide. Schopper B178
-silvers; Low-copper ——. Price and Grant B387
steels. *See under* Steels.
Working of —— for coinage. Rose and Watson B835
Nickel bromide; Equilibrium of reduction of —— by hydrogen. Crut B670
Nickel chloride; Equilibrium of reduction of —— by hydrogen. Crut B670
Nickel hydride, and mechanism of hydrogenation using a nickel catalyst. Schlenk and Weichselfelder B215
Nickel sulphide. Glund and Schönfelder B417
Nickel triacetate; Electrolytic production of —— from the diacetate. Schall and Markgraf B417
Nickel trichloride; Electrolytic production of ——. Schall and Markgraf B417
Nickelised hydrated aluminium oxide: Catalytic actions of ——. Zelinsky and Kommarewsky B445
Nicotine; Determination of pyridine in presence of ——. Mach and Sindlinger B276
Removing —— from tobacco. (P) Sartig B850
soap preparations; Deterioration of ——. McDonnell and Nealon B803

derivatives of *m*-halogenphenols; Manufacture of ——. (P) British Dyestuffs Corp., and Hodgson .. B87
Nitroso dyestuffs; Fast Steam Green; Printing white discharges on ——. Schmid .. B14
Nitroso-*m*-cresol; Preparation of —— and its application to separation of *m*- and *p*- cresols ——. (P) Ehrlich, and Verona Chemical Co. .. B860
Nitrosomethylurethane as a reagent for pyrocatechol tannins:
Leather Research Institute, Waalwijk .. B918
Vogel and Schüller .. B105
Nitrostarch explosives. *See under* Explosives.
4-Nitro-2-sulphophenyldehydrothio-*p*-toluidinesulphonic acid. Peacock .. B824
p-Nitrotoluene; Electrolytic oxidation of —— to the corresponding acid. Dunbrook and Lowy .. B444
p-Nitro-*o*-toluidine benzenemonosulphonate. Keyworth .. 341T
p-Nitro-*o*-toluidine salts of α- and β-naphthalenesulphonic acids. Forster and Keyworth .. 302T
Nitrous acid; Catalytic action of ——. Bancroft .. B906
Colour reaction of ——. Desvergnes .. B694
Oxidation of —— by means of permanganate. Kolthoff .. B866
Reactions of —— with sulphurous acid. Raschig .. B709

PAGE

Nitrous oxide; Adsorption of mixtures of carbon dioxide and —— by charcoal. Richardson and Woodhouse B14
Homogeneous thermal decomposition of ——. Hinshelwood and Burk B828
Kinetics of interaction of hydrogen and ——. Hinshelwood .. B828
Manufacture of ——. (P) Miller and others B746
Preparation of —— for anæsthetising. (P) Swartz, and White Dental Manuf. Co. B616
Nitrous gases; Apparatus for production of concentrated ——. (P) Halvorsen, and Norsk Hydro-Elektrisk Kvaelstofaktieselskab B746
Nitroxyl and dihydroxyammonia. Raschig B744
Noodles; Analysis of —— of known composition and determination of their content of egg solids. Buchanan B650
"Norit"; Methods for testing of decolorising carbons, and their comparison with ——. Sauer B226
Novocaine; Comparative toxicity of neocain, procain, apothesine, and ——. Meeker and Frazer B276
Preparation of ——. (P) Von Winkle, and Dow Chemical Co. B808
Nucleic acid; Methods of preparation of yeast ——. Steudel and Izumi B31
Preparation of large quantities of yeast —— as a magnesium compound. Baumann B846
Nucleosidase; Degree of specificity of —— and its distribution in various organs and in various species. Levene and Weber B883
Purification of ——. Levene and Weber B883
Nucleosidases; General properties of ——. Levene and others .. B883
Nux vomica extract; Assay of ——. Dott B805

O

Oak bark. Jalade B683
Oak-moss oil. *See under* Oils, Essential.
Oat hulls; Production of pentosan adhesives and furfural from ——. La Forge B274
kernel; Occurrence of amino-acids and polypeptides in the ungerminated ——. Jodidi B803
Oats; Proteins of ——. Lüers and Siegert B308
Ocimum viride; Essential oil of —— from Grasse and New Caledonia. Gilchitch B75
Octoic acid; Separation of decoic acid and —— from coconut oil. Walker B139
Odour and molecular asymmetry. Von Braun and Kaiser B33
Oil-bearing materials; Apparatus for destructive distillation of ——. (P) Alexander and Miller B703
Manufacture of —— for feeding purposes. (P) Wilbushewich B140
-cracking pressure-still tar; Slow gelation in ——. Sheppard and Eberlin B777
distillates; Desulphurisation of Mexican —— by the "doctor" treatment. Sissingh B776
emulsions; De-emulsifying ——. (P) Zoul B779
fuel. (P) Kirby, and General Oil Co. of New Jersey B460
fuel-; Burning ——. (P) Wiederwax B626
fuel; Solidified ——. (P) Illemann B85
refinery gases; Apparatus for treatment of ——. (P) Willard B665
sand; Treating ——. (P) McArthur B821
seeds; Apparatus for compressing —— to extract the oil. (P) Lamy-Torrilhon B1019
stills; Cooling ——. (P) Watkeys, and Gulf Refining Co. B165
wells; Recovery and refining of light hydrocarbon oils and gases from ——. (P) Knox and Speer B366
Oils; Action of catalysts with non-drying —— used for treating textiles. Gill B183
Addition of bromine to ——. Oestermann B719
Addition of bromine to —— and determination of the bromine value. Sabalitschka and Dietrich B755
Alcoholysis and composition of ——. Elsdon B877
Antirachitic action of certain ——. Shipley and others .. B444
Apparatus for automatic determination of water in ——. Schaefer B973
Apparatus for conversion and transformation of ——. (P) Adams, and Texas Co. B124
Apparatus for cracking and refining ——. (P) Reilly and McLain B821
Apparatus for extracting ——. (P) Nield B565, B719*
Apparatus for extracting —— from shale and the like. (P) Wallace and others B165
Apparatus for separating —— from oil-bearing sands and rocks. (P) Reilly B47
Apparatus for treating ——. (P) Pollock, and Universal Oil Products Co. B1005
Bergius process for cracking —— with hydrogen under pressure. Kling B791
Bleaching ——. (P) Langenkamp and Merck B526
Bleaching of —— as a colloid-chemical problem. Twisselmann B754
Catalysts for hardening ——. (P) Harter and Meyer B986
Catalytic hydrogenation of certain ——. Kahlenberg and Pi B184
Catalytic hydrogenation of —— with nickel, at the ordinary temperature. Tanaka B223
Centrifugal separators for dehydrating or otherwise purifying ——. (P) De Laval Chadburn Co., and Johnstone .. B1005
Continuous process for recovering —— from oil-seeds. (P) Fauth B526
Conversion and transformation of ——. (P) Adams, and Texas Co. B1005

Oils—*continued.*
core-; Preparation of ——. (P) Melamid B302
Cracking ——:
(P) Davidson and Conner B166
(P) Monnot B124
(P) V. L. Oil Processes, Ltd., and Lucas .. B779, B779
Cracking and distilling ——. (P) Davidson and Conner .. B166
Decolorising medium for ——. (P) Eberlein, and Chemical Foundation, Inc. B755
Deodorising ——. (P) Bollmann B839
Determination of bromine-iodine value of ——. Proscher .. B318
Determination of bromine and iodine values of ——. Sabalitschka and Dietrich B525
Determination of hydroxyl value of —— by Normann's method. Meigen and Ramge B184
Distilling ——:
(P) Allinson, and Doherty Research Co. B779
(P) Liebmann B461
(P) Woidich B459
Distilling —— with aluminium chloride. (P) McAfee, and Gulf Refining Co. B166, B779
Distilling and cracking ——. (P) Smith B503
Distilling emulsified —— in contact with porous materials. (P) Gallsworthy, and Texas Co. B124
Drying ——. *See under* Oils, Fatty.
Edible ——. *See under* Oils, Fatty.
Electrically heated apparatus for cracking ——. (P) Page and Fabyan B550
Extraction of ——:
(P) Dreymann B795
(P) Eddy, and Cocoa Products Co. of America .. B432
(P) Lemale B877
(P) Tunison, and U.S. Industrial Alcohol Co. .. B839
Extraction of —— from oleaginous grains and other materials by solvents. (P) Perin, and Soc. Anon. Acetoleum .. B603
Extraction of —— from vegetable fruits and nuts. (P) Moseley and others B23, B62
Extraction of —— with volatile solvents. (P) Rosenthal .. B23
Ferrous selenide as catalyst for cracking ——. Midgley, jun., and Hochwalt B932
Filtering ——. (P) Ward B186
Hydrogenated ——. *See under* Oils, Fatty.
Hydrogenation of ——:
(P) Ellis B102, B224
(P) Holden, and American Cotton Oil Co. B343*
(P) Lever Bros., and Thomas B140
and the like; Treating —— to remove or recover substances therefrom. (P) Patrick and others B1005
Manufacture of catalysts for hydrogenation of ——. (P) Ellis B432
Manufacture of cattle-feeding cakes and ——. (P) Dujardin B390
Material for treatment of ——. (P) Prutzman and others .. B9
Mixing and delivering aluminium chloride and ——. (P) King, and Gulf Refining Co. B166
Mineral ——. *See under* Oils, Hydrocarbon.
Obtaining drying —— from chlorinated hydrocarbons. (P) Gardner B434
Plant for continuous extraction of —— from stone fruit. (P) Soc. Anon. Olier B952
Preparation and revivification of metallic catalysts used in the hydrogenation of ——. (P) Technical Research Works, and Lush B916
Preparation of —— for varnishes, printing inks, paints, linoleum, and the like. (P) Calderwood and others .. B682
Process of converting ——. (P) McAfee, and Gulf Refining Co. B327
Producing mixtures of coal and ——. (P) Berl B500
Production of solutions of non-mineral —— with mineral oils. (P) Marshall B366
Production of therapeutically-active constituents of ——. (P) Boedecker B234
Recovery of ——, contained in agglomerates obtained by churning pulverised substances, such as coal, in a bath of water mixed with oil. (P) Soc. de Recherches et Perfectionnements Ind., and Bascou B548
Refining ——:
(P) Bollmann B603
(P) Croner B390
(P) Masson and Engel B124
(P) Pyzel B899
(P) Reilly B210
(P) Stoll B503
Relation between iodine values and refractive indices of hardened ——. Watson and Sudborough B755
Removal of —— from fuller's earth and the like. (P) Wenck and Co. B390
Removing solid impurities from extracted ——. Hassel .. B263
Retort for gasifying ——. (P) Sharp and Bassett B625
Separation of fatty acids from ——. (P) Wecker B877
Separating —— from oil-sand. (P) Streppe, and Deutsche Erdöl A.-G. B626
Separation of —— from water. (P) Vickers, Ltd., and McKechnie B283*
from shale or similar material; Apparatus for fractional distillation of ——. (P) Fairweather B410
Solvent for ——. (P) Chem. Fabr. Kalk, and Oehme .. B527
Thickening and/or bleaching ——. (P) Andrews, and Rose, Downs, and Thompson, Ltd. B877
Treating organic materials to make fertiliser meal and ——. (P) Hiller, and Hiller, Inc. B479
Treatment of ——. (P) Nicol, and Douglas and Sons, Ltd. B302*
Viscosity of —— at high temperatures. Fortsch and Wilson B777
Vulcanising ——. (P) Van der Meulen B917
Water-soluble "drilling" ——. Von der Heyden and Typke B877

PAGE

Oils, Essential :
Action of —— on germination of seeds. Sigmund B723
Ajowan oil ; Phenols in ——. Sobti and Singh B33
Artemisia herba alba oil ; Probable presence of thujone in ——. Allnari B536
Backhousia angustifolia oil. Penfold B926
Backhousia citriodora oil. Penfold B33
Backhousia myrtifolia (grey or "scrub" myrtle) oil. Penfold B576
Bæckea crenulata oil ; Stearoptene occurring in ——. Penfold and Morrison B576
Boronia thujona oil. Penfold B33
Boswellia serrata oleo-resin ; Oil from ——. Roberts .. B114
Calamintha umbrosa oil. Moudgill 163T, B966
Callistemon lanceolatus oil. Penfold B926
Callistemon viminalis oil. Penfold B926
Camphor oil ; Sesquiterpenes and sesquiterpene alcohols from ——. Ruzicka and Stoll B400
Camphor red oil ; Reaction between sulphuric acid and ——. Ono B447
Cardamoms oil. Moudgill 137T, B965
Cassia oil ; Utilisation of —— for synthesis of cinnamyl alcohol. Hill and Nason B997
Citronella oil ; Determination of citronellal in ——. Dupont and Labaune B926
Clove oil ; Determination of eugenol in ——. Bouma .. B313
Darwinia fascicularis oil. Penfold B33
Darwinia grandiflora oil. Penfold B926
Darwinia grandiflora oil ; Stearoptene occurring in ——. Penfold and Morrison B576
Determination of cineol in —— :
Cash and Fawsitt B926
Walker B75
Determination of —— in flavouring extracts. Randall .. B653
Disinfecting power of vapours of —— towards acid-fast bacteria. Schöbl and Kusana B765
Esterification in inert media for determination of alcohols in ——. Boulez B447
Eucalyptus citriodora oil. Penfold B33
Eucalyptus Macarthuri oil. Penfold B33
Eucalyptus oils ; Germicidal values of ——. Penfold and Grant B112
Eucalyptus oils ; Miscibility test for ——. Fawsitt and Fischer B576
Galbanum oil ; Cadinol from ——. Ruzicka and Stoll .. B278
Germicidal values of Australian —— (exclusive of eucalyptus oils), also of their constituents and some synthetic products. Penfold and Grant B923
Leptospermum citrata oil. Penfold B33
Leptospermum Liversidgei oil. Penfold B33
Manuka (*Leptospermum scoparium*) oil. Gardner .. 34T, B400
Melaleuca oils ; Australian ——. Baker and Smith B576
Mustard oil ; Characters and composition of ——. Delage.. B848
Mustard oil as a preservative for wines etc. Malvezin and Bidart B227
Mustard oil as preservative for wines and foodstuffs. Delage B69
Mustard oils ; Microchemical detection of ——. Pietschmann B889
Oak-moss oil. Walbaum and Rosenthal B537
Ocimum viride oil from Grasse and from New Caledonia. Gilchrist B75
Peppermint oil ; Determination of —— in pharmaceutical preparations. Randall B653
Peppermint oil extracted from peppermint water. Massera B114
Peppermint oil ; Lettish —— and influence of frost on its composition. Swirlowsky B75
Peppermint oil ; Manchurian ——. Nakao and Shibue .. B33
Peppermint oils ; Improving the odour and taste of ——. (P) Müller, and Finow Metall- u. Chem.-Fabr. B927
Pine wood oil ; Purification of ——. (P) Tenpel B403
Pinus pinea oil. Dupont and Barraud B615
Preparation of solutions of ——. (P) Soc. Chim. Usines du Rhône B448
Recovery of —— by distillation. (P) Todd, and Todd Co. B692
Rosemary oil. Traetta-Mosca and Papocchia B278
Rue oil ; Ketonic constituent of a sample of Algerian ——. Morgan and Holmes B653
Thyme oil ; Determination of thymol and carvacrol in Spanish ——. Sage and Dalton B1029
Thymus capitatus oil : Sicilian —— as a source of carvacrol. Palazzo and Lutri B536
Turmeric oil ; Constitution of curcumone from ——. Rupe and Wiederkehr B889
Viscosity of —— not suitable as a means of evaluation. De Jong and Van Harpen B1029

Oils, Fatty :
Aleurites montana oil. Parker and others B478
Almond oil ; Reichert-Meissl value of ——. Eldson and Smith B479
Animal oils ; Refining ——. (P) Quick B302*
Apricot-kernel oil ; Reichert-Meissl value of ——. Elsdon and Smith B479
Arachis oil ; Hydrogenation of ——. Lush 55T
Cashew-nut oil. West and Cruz B23
Castor oil ; Manufacture of composite lubricants from ——. (P) Dodge B124
Castor oil ; Test for distinguishing —— from other oils and for determining its purity. Stocks B102
Chaulmoogra oil and allied oils ; Comparative analytical study of ——. Perkins and Cruz B342
Chaulmoogra oil and allied preparations ; Chemotherapeutic experiments with ——. Schöbl B342, B342
Chaulmoogra oil ; Comparison of antiseptic power of —— with that of other vegetable and animal oils. Schöbl .. B342
Chaulmoogra oil ; Toxicity of ——. Read B1029

Oils, Fatty—*continued.*
Chaulmoogra and other vegetable oils ; Mechanism of growth-inhibiting effect of —— towards acid-fast bacilli. Schöbl B995
Chufa oil from tubers of *Cyperus esculentus* : Constituents of ——. Baughman and Jamieson B139
Coconut oil ; Composition of ——. Elsdon B639
Coconut oil ; Detection of —— in chocolate. Härtel and Maranis B571
Coconut oil ; Detection of traces of alkali or soap in refined ——. Brooke B986
Coconut oil ; Determination of butter fat and —— in fat mixtures. Leopold and De Mooy B222
Coconut oil ; Hydrogenation of ——. Lush 54T
Coconut oil ; Influence of solvents on Hanus iodine value of ——. Bankston, jun., and Vilbrandt B681
Coconut oil ; Rancidity of ——. Boedtker B341
Coconut oil refining. Lee B430
Coconut oil ; Separation of octoic and decoic acids from ——. Walker B139
Cod liver oil ; Durability of vitamin A of ——. Poulsson .. B962
Cod liver oil ; Effect of storage of livers on vitamin A potency of ——. Holmes B390
Cod liver oil ; Highly unsaturated acids in ——. Tsujimoto and Kimura B139
Cod liver oil ; Influence of storage and of emulsification on vitamin A in ——. Drummond and others .. 236T, B954
Cod liver oil ; Relation of vitamin A potency of —— to sexual condition and age of the cod. Zilva and others B342
Cod liver oil ; Removing odour and flavour from —— or from like oils or the unsaponifiable portion thereof whilst retaining vitamin activity. (P) Pearson and Co., and Clark .. B681
Cod liver oil ; Stability of vitamin A of —— towards the hardening process. Zilva B962
Cod liver oil ; Vitamin content of ——. Stammers B349
Cod liver oil ; Vitamin A potency of ——. Holmes B431
Colorimetry of ——. Dickhart's reaction. Heller B877
Cottonseed oil ; Decomposition of —— in a closed vessel at 450° compared with hydrogenation of the oil by the Bergius method. Waterman and Perquin B525
Cottonseed oil ; Hydrogenation of ——. Lush 53T
Cottonseed oil ; Influence of solvents on Hanus iodine value of ——. Bankston, jun., and Vilbrandt B681
Cottonseed oil ; Production of ——. (P) Bollmann B603
Drying oils ; Permeability of films of ——. Bauer and Gonser B987
Drying oils ; Polymerisation of ——. Morrell 362T
Drying oils ; So-called polymerisation of ——. Wolff B916
Edible oils ; Deodorising ——. (P) La Bour, and Chemical Equipment Co. B719
Esterification of —— to neutralise free fatty acids (P) Bolton and others B224*
Fish oils ; Preparation of highly unsaturated acids of ——. Tsujimoto and Kimura B62
Fish oils ; Quantitative analysis of sardine blubber and its value as a paint vehicle. Eibner and Semmelbauer B986
Hake liver oil ; Vitamin A potency of ——. Holmes B431
Hardened oils ; Relation between iodine values and refractive indices of ——. Watson and Sudborough B755
Hydrogenated oils ; Manufacture of food products from ——. (P) Boyce, and American Cotton Oil Co. B310
Hydrogenated oils ; Recognition of ——. Williams and Bolton B952
Influence of water on course of reaction of alcoholic iodine solution with ——. Margosches and others B680
Linseed oil ; Crystalline bromides from ——. Toms .. B264
Linseed oil ; Effect of iron oxide pigments on rate of oxidation of ——. Rhodes and others B916
Linseed oil ; Filtering ——. (P) Ward B186
Linseed oil group and poppy seed oil group ; Differences between oils of —— as vehicles for artists' colours. Eibner and Wibelitz B641
Linseed oil ; Oxidation of lumbang oil and ——. West and De Leon B342
Linseed oil ; Polymerisation of ——. Friend and Alcock B525, B754
Linseed oil ; Quantitive analysis of a sample of ——. Eibner and Schmidinger B101
Linseed oil substitutes. (P) Bayer and Co. B434
Lumbang oil ; Oxidation of linseed oil and —— and of the principal compounds in lumbang oil. West and De Leon B342
Lupin seed oils. Guillaume B302
Marine animal oils ; Analysis of oxidised ——. Last B918
Marine animal oils ; Distillation of —— and separation of the fatty acids present in animal fats from those peculiar to marine animal oils. (P) Stiepel B479, B603
Marine animal oils ; Sulphonation of —— for preparation of fat-liquoring material. Rose and Keh B918
Marine animal oils from the zoological viewpoint. Van Gavers B390
Olive oil ; Action of catalysts with ——. Gill B183
Olive oil ; Condensation of mannitol with ——. Irvine and Gilchrist B263
Olive oil having a bitter taste. Shelley.. .. .. .. B681
Oncoba echinata (gorli) oil ; Medicinal value of ——. B342
Oncoba spinosa oil ; Medicinal value of ——. B342
Palm oil ; Commercial manufacture of ——. Aheele B564
Palm-kernel oil ; Glycerides of ——. Bömer and Schneider .. B478
Palm-kernel oil ; Hydrogenation of ——. Lush 55T
Pecan oil ; Chemical constituents of ——. Boone B183
Perilla oil ; Bromides of linolenic acid of ——. Bauer B264
Poppy seed oil group ; Differences between oils of linseed oil group and —— as vehicles for artists' colours. Eibner and Wibelitz B641
Queensland nut (*Macadamia ternifolia*) oil. Morrison and Morrison B915
Ray-fish liver oil ; Unsaponifiable constituents (higher alcohols) of ——. Toyama B431, B719

PAGE

Oils, Fatty—*continued*.
Rayan oil. Patel .. B795
Salvia plebeia oil. Rau and Simonsen .. B478
Seal oil. Bauer and Neth .. B183
Sesamé oil; Baudouin test for ——. Gravenhorst .. B183
Sesamé oil; Chemical composition of ——. Jamieson and Baughman .. B431
Sesamé oil; Crushing mills for refining crude ——. (P) Fahim .. B916
Shark liver oil; Unsaponifiable constituents (higher alcohols) of ——. Toyama .. B431, B710
Shark liver oils; Saturated hydrocarbon from ——. Toyama B224
Soya bean oil; Composition of ——. Wallis and Burrows .. B838
Soya bean miso oil. Kodama .. B564
Sulphonated oils of animal origin; Production of soluble ——. (P) Aische .. B140
Sulphonated oils and proposed methods of analysis for practical purposes of the leather industry. Stadler .. B65
Theory of polymerisation in ——. Morrell .. B754
Treatment of ——. (P) Bissell, and Vegetable Oil Securities Co. B1019
Treatment of —— by the Voltol process. Eichwald .. B754
Tung oil. Elbner and others .. B477
Tung oil; Alkali viscosity increase test for varnishes made with ——. Gardner and Holdt .. B682
Tung oil; Crushing experiments on production of —— from American seed. Gardner .. B639
Tung oil; Drying of ——. Schmidt .. B604
Tung oil; Drying of —— and its so-called "webbing." Wolff B565
Tung oil; Filtering ——. (P) Ward .. B186
Tung oil; Utilisation of —— in linoleum manufacture. Fritz B303
Vegetable oils; Disinfecting power of vapours of —— towards acid-fast bacteria. Schöbl and Kusama .. B765
Vegetable oils; Preparation of liquid fuels from ——. Gallo and Corelli .. B458
Vegetable oils; Refining ——. (P) Quick .. B302*
Vegetable oils; Removal of acids from —— by adsorption. Bechhold and others .. B264
Vegetable oils; Selective action of nickel catalyst in hydrogenation of ——. Richardson and others .. B564
Whale oil; Composition of ——. Milligan and others .. B223
Whale oils; Fatty acids of hump-backed and finner ——. Toyama .. B1019

Oils, Hydrocarbon:
Apparatus for refining ——:
(P) Johnson .. B550
(P) Reilly .. B626
Conversion of —— and of similar substances. (P) Emerson .. B410
Cracking ——:
(P) Davidson and Lewis .. B899
(P) Linton, and Linton Gasoline Process Co. .. B286*
Crude oils of Burmah and Assam. Wilson .. B701
Crude oils of the Empire. Dunstan and Kewley .. B776
Crude oils; Viscosity-temperature curves of fractions of typical American ——. Lane and Dean .. B858
Crude oils. *See also* Petroleum.
Cylinder oils; Determination of viscosity of ——. Berl and others .. B364
Decolorising ——. (P) Manning, and Manning Refining Equipment Corp. .. B821
Decomposing water and —— and re-composing the products therefrom. (P) Murrle .. B503
Determination of sludge value of ——. Schwarz and Marcusson B586
Distillation of ——. (P) Power Specialty Co. .. B9
Extraction of —— from oil-bearing earthy material. (P) Day B125*
Lowering viscosity of ——. (P) Culmer .. B821
Mineral oil distillates; Desulphurisation of —— by means of hypochlorite. Waterman and Heimel .. B739
Mineral oils; Apparatus for dehydrating —— by boiling. (P) Dehne .. B626
Mineral oils; Apparatus for distillation of ——:
(P) Billow and Allen .. B1005
(P) Power Specialty Co. .. B85
Mineral oils; Catalytic action of metals on ——. Stäger and Bohnenblust .. B898
Mineral oils; Dehydration and distillation of ——. (P) Thermal Industrial and Chemical (T.I.C.) Research Co., and Rider .. B934
Mineral oils; Determination of sludge value of ——. Bauerschäfer .. B818
Mineral oils; Distilling with catalytic chemicals for production of low-boiling ——. (P) Prichard and others .. B85
Minerals oils; Fluidity anomalies in refined ——. Bingham and others .. B162
Mineral oils; Process of making —— non-sludging. (P) Moody B9
Mineral oils; Production of solutions of non-mineral oils with ——. (P) Marshall .. B366
Mineral oils; Production of sulpho-compounds from ——. (P) Johansen, and Atlantic Refining Co. .. B124
Mineral oils; Purifying and hydrogenating heavy ——. (P) Internationale Bergin Co., and Hofsäss .. B503
Mineral oils; Purifying —— from sulphur. (P) Hillman .. B550
Mineral oils; Refining ——:
(P) Forward .. B9
(P) Hall, and De Laval Separator Co. .. B85
(P) Hütz .. B366, B503
(P) Oil Refining Improvements Co., and Hood .. B47
(P) Petty, and De Laval Separator Co. .. B779
(P) Rialland .. B209
Mineral oils; Removing acid constituents from ——. (P) Fischer .. B287
Mineral oils; Retorts or stills for ——. (P) Lamplough and Harper .. B326
Mineral oils and spirits; Treatment and purification of ——. (P) V.L. Oil Processes, Ltd., and Lucas .. B550

Oils, Hydrocarbon—*continued*.
Mineral oils; Treatment of ——:
(P) Hoyt .. B503
(P) V.L. Oil Processes, Ltd., and Lucas .. B366
Mineral oils; Treatment of —— by the Voltol process. Eichwald .. B754
Molecular conversion of —— and separation of the resulting products. (P) Lewis .. B460
Paraffin oil: Determination of —— in pharmaceutical preparations. Weichherz and Klinger .. B232
Production of low-boiling ——. (P) Richard and others .. B9
Recovery and refining of gases and light —— from oil wells. (P) Knox and Speer .. B366
Treatment of vapours of ——. (P) Lamplough .. B665
Oleanolc. Van der Haar .. B996
Olefines; Determination of —— in gas mixtures. Suida and Wesely .. B623
and mixtures containing them; Preparation of chemical products from ——. (P) Ramage, and Bostaph Engineering Corporation .. B410
Preparation of gaseous and liquid ——. (P) Chem. Fabr. Kalk. B821
Oleic acid; Action of catalysts with ——. Gill .. B183
compound; Preparation of ——. (P) Ellis .. B77
Hydrogenation of —— with nickel as catalyst. De Roubaix .. B603
Oleic alcohol. Toyama .. B223
Oleine; Hydrogenation of commercial —— with nickel as catalyst. De Roubaix .. B603
Oleo-resins. *See under* Resins.
Oleum; Apparatus for analysis of ——. Bosshard .. B376
Vapour pressures of —— and their application to problem of absorption of sulphur trioxide. McDavid .. 57T, B291
Olive oil. *See under* Oils, Fatty.
residues; Dry distillation of ——. Basanta .. B525
Olives; Composition of Corsican ——. Sujons .. B1018
Preservation of —— for oil production. Mareille .. B1018
Oncoba oils. *See under* Oils, Fatty.
Ooporphyrin. Fischer and Kögl .. B125
Opium alkaloids; Extraction of ——. Kanewskaja .. B1028
extracts; Preparation of permanently clear —— suitable for subcutaneous injection. (P) Byk-Guldenwerke Chem. Fabr. .. B849
Oppau ammonium sulphate-nitrate; Chemical and physical properties of ——. Robertson and others .. B494
ammonium sulphate-nitrate; Experiments to determine whether —— possesses explosive properties. Rotter .. B494
Orange juice as a source of vitamin B. Stammers .. B349
Orcinol content of *Lecanora tartarea*. Patterson .. 190T
Ore suspensions; Centrifugal separator for ——. (P) Eccleston, and Centrifugal National Concentrator Co. .. B60
Ores; Agglomerating ——. (P) Smidth & Co. .. B137, B262
Agglomerating mixtures of fine —— and fuel in shaft furnaces. (P) Giesecke .. B180
Agglomeration of pulverulent ——. (P) Poppe .. B837
Apparatus for concentrating —— by froth flotation. (P) Vereen. Kolenmaalschappij .. B587
Binding granular and other substances, such as —— which in their normal condition are incapable of being bound. (P) Jung .. B985
Briquetting ——. (P) Beasley and others .. B602
Combined sulphidation and flotation of ——. (P) Barrows .. B340
Concentration of ——:
(P) Dolbear, and Pneumatic Process Flotation Co. .. B222
(P) Dosenbach .. B100
(P) Eberenz and others .. B875
(P) Frederick and others .. B562

(P) Sulman and others .. B523*
(P) Tucker and others .. B602*
(P) Vogt, and Standard Chemical Co. .. B20
Concentration of —— by flotation:
(P) Elektro-Osmose-Humboldt A.-G. .. B680
(P) Emery .. B137
(P) Luckenbach, and Luckenbach Processes, Inc. .. B21
(P) Luckenbach Processes, Inc. .. B100
(P) Sayre, and Metals Recovery Co. .. B680
(P) Scott, and Minerals Separation North American Corp. .. B914
Concentration of mixed sulphide ——. (P) Pallanch, and Metals Recovery Co. .. B429
Concentration of —— and of metalliferous residues and the like. (P) Dyson and Aitchison .. B222*
Concentration of oxidised —— by flotation. (P) Eureka Metallurgical Co. .. B985
Decomposition of ——. (P) Gat .. B301*
Desulphurising sulphide ——. (P) A.-G. für Bergbau, Blei- und Zinkfabr. zu Stolberg .. B679
Dielectric separation: a new method for treatment of ——. Hatfield .. B261
Direct reduction of ——. (P) Basset .. B474
Electric smelting of ——. (P) Dow .. B21
Electrolysis of fused salts of metals and recovery of metals and acid radicals, and application to the recovery of valuable constituents from metal-bearing ——. (P) Ashcroft .. B179
Flotation of ——. (P) Ellis, and Ellis Flotation Co. .. B470
Flotation of —— containing sulphides and carbonates. (P) Wolf, and Elektro-Osmose A.-G. .. B100
Flotation of —— and materials therefor. (P) McCullough and others .. B100

PAGE

Ores—*continued.*
Flotation process of recovering values from ——. (P) Nokes, and Eureka Metallurgical Co. B602*
Furnacing process for recovery of volatile constituents from ——. (P) Fogh, and Ore Roasting Development Co. B21
Heat treatment of ——. (P) Clevengor, and Research Corp. .. B523
Laboratory testing of —— by dielectric separation. Holman and Shepherd B261
and the like; Apparatus for concentration of —— by froth flotation. (P) Jones and others B794*
and the like; Apparatus for washing ——:
(P) Wilmot B822*
(P) Wilmot and Blatch B822*
and the like; Froth-flotation concentration of ——. (P) Minerals Separation North American Corp. B717
Machines for sintering ——. (P) Lloyd, and Dwight and Lloyd Sintering Co. B222, B1018
Preparation of —— for leaching. (P) Hennes B339
Preparation and smelting of ——. (P) Diehl B340
Preparation of sulphur-containing —— especially for extraction of precious metals. (P) Soc. Metalurgica Chilena "Cuprum" B429
Preparation of —— for treatment for recovery of the metallic contents. (P) Soc. Metalurgica Chilena "Cuprum" .. B951
Process for making agglomerates of fine ——. (P) Giesecke .. B101*
Producing air-tight joints between receptacles and suction-boxes in apparatus for sintering and otherwise treating ——. (P) Stehli B951*
Recovering metallic values from —— by chloridising roasting. (P) Schmidt and others B950
Reducing powdered ——. (P) Wuensch B523
Reducing and refining ——. (P) Mill and Gray B602
Reduction of ——:
(P) Coley B601
(P) Girouard and Salisbury-Jones B389*
Reduction of —— and production of calcium carbide. (P) Reid, and International Nitrogen Co. B558
Roasting —— in shaft furnaces. (P) Plauson's Forschungsinst. B424
Roasting sulphide ——. (P) Middleton and Lalor B181
Selective flotation of ——. (P) Bragg, and Metals Recovery Co. B181
Selective flotation as applied to Canadian ——. Parsons .. B751
Sintering fine ——. (P) Holmberg, and Allmänna Ingeniörsbyran Torulf B914*, B949
Sintering fine and pulverous —— by means of portable sintering vessels. (P) Allmänna Ingeniörsbyran Torulf B985
Smelting ——. (P) Kapteyn, jun. B476
Treatment of ——:
(P) Gordon and Keith B602*
(P) Hirt, and Mexican Northern Mining and Railway Co. B638
(P) Mackay B61*
(P) Merryweather, and Bethlehem Steel Co. B428
(P) Moxham and Laffey B430*
(P) Soc. Anon. Cockerill, and Cousin B474
(P) Varley B389
Treatment of complex sulphide ——. (P) Perkins, and Metals Production Co. of North America B101*
Treatment of oxidised ——. (P) Perkins, and Metals Production Co. of North America B837*
Treatment of siliclous ——. (P) Wigton and others B340*
Treatment of sulphide —— and the like. (P) Ashcroft B476*
Treatment of sulphide —— with nitrates. (P) Libby B914
Treatment of sulphide and oxidised ——. (P) Hamilton .. B182*
Organic compounds; Manufacture of —— by reactions with liquid reagents. (P) Shannan and others B462
compounds; Oxidation of ——. (P) Badische Anilin u. Soda Fabr. B403*
compounds; Oxidation of aromatic ——. (P) Chem. Werke Grenzach A.-G. B401
compounds; Volumetric method of elementary analysis of ——. Hackspill and D'Huart B771
liquids; Preparation of homogeneous mixtures of ——. (P) Schrauth B704
liquids; Purification of ——. Nathanson B407
liquids; Treatment of —— with relatively small amounts of other liquids which give rise to injurious side reactions. (P) Deutsch, and Consortium für Elektrochem. Ind. B811
matter; Continuous reduction process for treating waste ——. (P) Maclachlan, and Maclachlan Reduction Process Co. .. B534*
substances in alkaline liquors; Oxidising ——. (P) D'Ans .. B743*
substances; Determination of purity of —— by the bichromate method. Grey B199
substances; Ease of oxidation of —— at the ordinary temperature. Gompel and others B445
Organisms; Metallisation of ——. Zelinsky B20
Orthophosphates; Simple and double metal ——. Applications to analysis. Travers and Perron B771
Osazones; Iodometric determination of nitrogen in ——. Nanji .. B190
Osmiridium; Assay method for —— in pyritic concentrates. Watson B426
recovery from banket. Stanley and Adam B177
Osmium; "Alcoholic fermentation" of formaldehyde by ——. Müller B232
Reactions for detection of ——. Wöhler and Metz B998
Osmium tetroxide as reagent for determination of tannins and their derivatives. Mitchell B481
Ovens, chamber-; Vertical ——:
(P) Hilby and van Haerst B820
(P) Otto B820
Distillation —— for manufacture of coke and gas. (P) Gewerkschaft ver. Constantin der Grosse B664
Overvoltage; Phenomena of passivity, and cathodic ——. Liebreich and Wiederholt B790
of zinc; Hydrogen ——. Westrip B837
Oxalates; Studies of sparingly soluble ——, readily obtained from hot solutions of reacting substances. Chatterjee and Dhar B964
Transformation of insoluble —— by means of sodium carbonate solution. Curtman and Hart B454
Oxalic acid; Influence of strong acids on solubility of ——. Herz and Neukirch B277
Preparation of ——:
(P) Badische Anilin und Soda Fabr. B848
(P) Deutsche Gold- u. Silber-Scheide-Anstalt B401
or its salts; Obtaining ——. (P) Bhopal Produce Trust, Ltd., and Fraymouth B577
Synthesis of ——. Matignon and Faurholt B768
Titration of —— with permanganates. Kolthoff B619
as a titration standard. Treadwell and Johner B580
Oxidation of aromatic compounds by means of oxygen-containing gases; Catalysts for ——. (P) Melgs and Ellis B493
of aromatic hydrocarbons; Electrochemical ——. Fichter .. B430
of aromatic organic compounds. (P) Chem. Werke Grenzach A.-G. B401
Catalytic and induced —— in presence of salts of cerium and of iron. Goard and Rideal B214
Induced —— and explanation of the internal use of iron salts and of fever. Dhar B925
of organic compounds. (P) Badische Anilin u. Soda Fabr. .. B403*
of organic substances at the ordinary temperature; Ease of ——. Gompel and others B445
potential; Benzidine as reagent for specific ——. Kolthoff .. B156
processes; Mechanism of ——. Wieland B74
-reduction processes manifest in biochemical processes; Mechanism of ——. Girard and Platard B455
Sulphochromic —— and β-oxidation. Polonovski B277
Oxidations induced by metals. Aloy and Valdiguié B705
Oxide, spent; Extraction of sulphur from ——. (P) Given, and Stevens Aylsworth Co. B124
Oxides; Absorption of gases by colloidal —— and mode of action of electric accumulators. Bary B263
Apparatus for reducing metal —— with hydrogen. (P) Perczel B793
Behaviour of —— in the flotation process. Berl and Pfannmüller B792
Dissociation of some —— by heat. Balarew B595
Manufacture of ——. (P) Thibault B257*
Production of plastic masses from non-plastic ——. (P) Ruff .. B96
Reduction of ——. (P) Coley B601
Reduction of metal ——. (P) Berlin B679
and similar products; Production of metal ——. (P) Gjersoe .. B711
Oxidised substances; Bunsen iodometric distillation method of determining highly ——. Jander and Beste B619
Oxidoketones; Production of ——. (P) Weitz B890
Oxycodeinone; Preparation of a reduction product of ——. (P) Freund and Speyer B200, B492
Oxydase of milk; Preparation and properties of xanthine ——. Dixon and Thurlow B960
of milk; Xanthine ——. Dynamics of the oxydase system. Dixon and Thurlow B960
of milk; Xanthine ——. Reduction of nitrates. Dixon and Thurlow B960
preparations; Applicability of guaiacol for measuring the activity of ——. Fleury B610
Oxydases, artificial; Hydrolysis of starch by ——. Biedermann and Jernakoff B991
and oxidation of quinol. Clarens B959
Oxygen; Activation of —— by metallic copper. Wieland and others B74
Activation of —— in slow oxidation of sodium sulphite. Jorissen and Van den Pol B1011
Case in which Winkler's manganous process for dissolved —— is untrustworthy. Coste and Andrews B31
Catalytic electrolytic generation of ——. Fink B631
Colorimetric detection and determination of available —— in oxygen-yielding salts and detergents. Jungkunz B877
Determination of dissolved —— in presence of iron salts. Buswell and Gallaher B72
Determination of dissolved —— in small samples of water. Winkler B573
Determination of hydrogen in electrolytic ——. Geberth .. B204
Direct union of sulphur and ——. Norrish and Rideal B172
Effect of absorption of carbon dioxide upon conductivity of sodium hydroxide electrolyte in cells for production of hydrogen and ——. Holmboe B61
Electrolyser for producing hydrogen and ——:
(P) Fauser B633
(P) Levin B138
Electrolytic manufacture of hydrogen and ——. (P) Scott .. B257
liquid; Devices for regulating evaporation of ——. (P) Kautny B621
Manufacture of durable compounds containing active ——. (P) Noll B980
Production of pure nitrogen and —— from air. (P) Barbet .. B512*
Solubility of —— in solutions of ammonium chloride. Coste and Andrews B398
Use of air enriched with —— in the blast furnace. Seigle .. B599
Use of —— and of oxygen-enriched air in pig-iron production. Schonck B517
Oxyhydrogen cell; Reactions occurring during the discharge of the ——. Fischer and Krönig B718
Oxysulpho-oleic acid; Preparation of ——. Sprenger B223
Ozone; Action of —— on hydrocarbons, with special reference to production of formaldehyde. Action of ozone on *n*-hexane. Blair and others 287T, B807
apparatus. (P) Quain B889, B795*
Apparatus for electrically producing ——. (P) Kuhlenschmidt, and Ozon-Technik A.-G. B680
Bromometric determination of ——. Manchot and Oberhauser B217

M

PAGE

Ozone—*continued.*
Determination of —— in presence of hydrogen peroxide. Bamberger and Trantzl B632
Electrical apparatus for generating ——. (P) McBlain B524, B795
Electrolytic preparation of —— with an alternating current superposed on a continuous current. Malquori B942
in flames. Manchot and Bauer B595
Formation of —— at low temperatures and pressures. Eucken .. B216
generators:
(P) Hartman B150
(P) Hartman, and Electric Water Sterilizer and Ozone Co. B795*
machines; Operation of —— and manufacture of ozonised air. (P) Todd and Tener B838
Manufacture of ——. (P) McEachron, and Trustees for Purdue University B711
Oxidation of saturated hydrocarbons by ——. Koetschau and Flemming B210
Oxidations with ——. Preparation of vanillin. Briner and others B277
Photochemical reactivity of —— in presence of other gases:
Griffith and MacWillie B93
Griffith and Shutt B93
Physical laws of formation of —— by the silent discharge. Chassy B524
Preparation of —— by means of flames as a lecture experiment. Hofmann and Kronenberg B745
Relation between glow of phosphorus and formation of ——. Downey B293
Thermal formation of ——. Riesenfeld and Beja B557
water-purifying apparatus; Mixer for ——. (P) Hartman, and Electric Water Sterilizer and Ozone Co. B150
Ozonised oxygen; Action of —— on mercury. Hodgson B293

P

Packing for rotating shafts, nozzles, and bearings; Gas- or fluid-tight ——. (P) Lancaster and Tonge, Ltd., and Butterworth B206*
Paint coatings; Degree of permeability of ——. Jaeger B303
films; Examination of lithopone ——. Wolff B640
films; Staining —— for microscopical examination. Maxwell .. B63
-removing compositions. (P) Mains B434
vehicle; Manufacture of ——. (P) "Friha" Farben-Komp. B682
vehicle; Manufacture of a —— from wool-scouring effluents. (P) Fink B104
vehicle; Sardine blubber as a ——. Ellmer and Semmelbauer .. B986
Paints; Case of colloidal thickening in varnish ——. Coffignier .. B839
Colloidal phenomena in —— due to polymerised oils. Coffignier B63
for decreasing or increasing heat radiation from surfaces; Emissive tests of ——. Coblentz and Hughes B719
De-livering ——. (P) Bradley B224
Determination of gloss of ——. Wolff B103
Determination of viscosity of ——. Wolff B916
Flow-meter for ——. Gardner and Holdt B140
of high luminosity to reduce refrigeration losses. Gardner and Parks B839
Lead ——. (P) Shimadzu B566
Manufacture of ——:
(P) Bachman B566
(P) Gardner B391
(P) Holzapfel B141
(P) Planson B103
(P) Rimmer B24
Manufacture of anti-corrosive ——. (P) Beer Söhne B879
Manufacture of black ——. (P) Uhde and Pirrmann B103
Manufacture of pigments for anti-rust ——. (P) Carteret and Devaux B185
Manufacture of priming and rust-resisting ——. (P) Welthöner, and Chem. Lab. für Anstrichstoffe B392
Manufacture of quick-drying, anti-corrosive oil ——. (P) Gelsenkirchener Bergwerks A.-G. B879
Manufacture of waterproof ——. (P) Mitchell and Mitchell .. B797
Manufacture of weather-resistant washable ——. (P) Mecke .. B133
Method of mixing rubber compounds as used in manufacture of insulating ——. (P) Russell and Broomfield B480
Microchemistry of white pigments and inerts occurring in mixed ——. Green B681
Mills for grinding ——. (P) Torrance B238
Preparation of oils for ——. (P) Calderwood and others .. B682
Relation of acidity to jellying of asphalt ——. Fisher B566
Submarine ——. (P) Gardner B682
Testing fluidity of ——. Wurth B603
Thickening of ——. Coffignier B265
Palladium; Determination of mercury, gold, and —— and separation of these metals from other metals. Moser and Niessner .. B202
electrodes for determination of hydrogen-ion concentration. Andrews B539
Promoting action of —— on copper. Hurst and Rideal B418, B418
Palladous oxide; Preparation of —— and its use as catalyst in reduction of organic compounds. Shriner and Adams .. B730
Palm oil. *See under* Oils, Fatty.
Palm-kernel oil. *See under* Oils, Fatty.
Palmitic anhydride. Holde and others B264
Panax repens, Maxim; Saponin of ——. Murayama and Itagaki .. B276
Pancreas; Aqueous extracts of ——. Physical and chemical behaviour of insulin. Piper and others B231
Aqueous extracts of ——. Precipitation reactions of insulin. Kimball and Murlin B231

PAGE

Pancreas—*continued.*
Preparation of an extract for treatment of *diabetes mellitus* from the mammalian —— or from the related glands of fishes. (P) Moloney and Findlay B34
Pancreatic juice; Effects of electrolysis on enzymes of ——. Maignon B227
Panification. *See* Bread-making.
Pansy; Colouring matter of the blue ——. Currey B780
Papaverine nitrite; Preparation of ——. (P) Boehringer Sohn .. B812
Papaverine-yohimbine tartrate; Preparation of ——. (P) Fleischer and Hirsch-Tabor B314
Paper; Ageing of rubber-latex ——. Shaw and Carson B506
Aluminium compound for sizing ——. (P) Bishop B334
Apparatus for treatment of waste ——. (P) Stevens, and Little, Inc. B331
Bleaching cellulose pulp for manufacture of ——. (P) Souchon B905
with colour effects fast to light; Manufacture of ——, (P) Meister, Lucius, u. Brüning B826
copying-; Damping medium for ——. (P) May and Ehrlich .. B708
De-inking printed ——. (P) Granton B977
Destruction of —— by ink. Herzberg B373
Detection of acids in ——. Schleicher and Rössler B553
Detection of animal size in surface-sized ——. Carson B506
Determination of mechanical wood pulp in printing ——. Teicher B938
Durability of rubber-latex ——. Kaye B938
Extracting from vegetable substances products for use in manufacture of —— and for other purposes. (P) Wuensch and Köppel B553
fibre composition standards. Merritt B904
filter-; Production of pure cellulose for the manufacture of ——. (P) Rabbow, Willink und Co. B826
filter-; Use of pulped —— in analysis. Wilke-Dörfurt and Locher B892
Flexible elastic ——. (P) Vater Papiergrosshandlung .. B374
Impregnating ——. (P) Koplin, and Thomas Phillips Co. B784
Impregnating —— with rubber. (P) Runge-Werke A.-G. B290
-like product; Manufacture of ——. (P) Moses B464
-making; Beating and refining apparatus for ——. (P) Leicester B629*
-making; Digesters used in ——. (P) Stewart and Brown .. B707
-making fibres; Behaviour of principal —— towards dyestuffs and iodine, and effect of beating. Huebner B463
-making fibres; Manufacture of ——. (P) Drewsen, and West Virginia Pulp and Paper Co. B977
-making; Flax straw for ——. De Rue and others .. B976
-making; Strainers for straining pulp for ——. (P) Milne .. B465*
-making; Treating fibrous materials for —— and for other purposes. (P) Weygang B905*
Manufacture of ——:
(P) Brooke and others B52
(P) Dolder B331
(P) Fues B743
(P) Howard and Belknap B291
(P) Kaye B708*
(P) Olander and Moisio B374
(P) Planson B628*
(P) Schidrowitz, and Vultex, Ltd. B743*
(P) Thomson, and Champion Coated Paper Co. .. B554
Manufacture of abrasive ——. (P) Jackson B129
Manufacture of chemically active ——. (P) Sauer B826
Manufacture of coated ——. (P) Roth B13
Manufacture of compact, thick ——. (P) Schwalbe B13
Manufacture of —— from peat. (P) Planson B52*
Manufacture of reinforced ——. (P) Jackson B465*
Manufacture of rubber ——. (P) Pelikan B1009
Manufacture of rubberised ——. (P) Schidrowitz B291
Manufacture of rubberised parchment ——. (P) Marshall and McClellan B1009
Manufacture of satin white for coating ——. (P) Ryan .. B13
Manufacture of translucent —— coated with varnish. (P) Brumby and others B465*
Manufacture of transparent, semi-transparent, or translucent ——. (P) Dickinson and Co., and Ellens B91*
Manufacture of waterproof abrasive ——. (P) Behr and Co., and Crupi B331
Manufacture of water-resisting ——. (P) Fues B290
Measure of the colour characteristics of white ——. Lofton B373
Parchment —— and substitutes as wrappers for foodstuffs. Weiss B230
parchment-; Treatment of ——. (P) Hough B784
Photographic ——. *See under* Photographic.
Printing sized ——. (P) Murray, and Todd Protectograph Co. B978
Production of colour effects on ——. (P) Meister, Lucius, und Brüning B332
Production of a linen or other fabric surface on ——. (P) Milne B374*
proof against forgery; Manufacture of banknote ——. (P) Gräfe and Wadewitz B820
pulp; Analysis of lime sludge from causticising in manufacture of ——. Walter and Gunkel B160
pulp; Analysis of newsprint ——. Tingle B904
pulp; Beating, sizing, colouring, and loading ——:
(P) Lorenz and others B826
(P) Planson's Forschungsinst. B52
pulp; Hydration of —— in the hollander by addition of chemical agents. Schwalbe B373
pulp or the like; Apparatus for straining ——. (P) Nebrich B708*
pulp and the like; Extraction of liquid from —— by suction. (P) Huebner and Ardern B939
pulp; Machines for straining ——. (P) Watford Engineering Works, and Paramor B629*

Paper—*continued.*
pulp; Manufacture of a pale-coloured —— suitable as a substitute for wood pulp. (P) Braun B826
pulp from maritime pine. Michel-Jaffard B783
pulp; Preservation of wood for use in manufacture of ——. (P) Audibert and others B1009
pulp; Preserving and treating ——. (P) De Cew, and Process Engineers, Inc. B415
pulp; Production of cooking liquors for manufacture of ——. (P) Plumstead, and Jessup and Moore Paper Co. B464
and pulp; Production of half-stuff and cellulose for manufacture of —— from vegetable fibres, including peat. (P) Koch and Runkel B593*
pulp; Rapid determination of degree of beating of ——. Jacobsen B1009
pulp; Refining or beating engines for ——. (P) Lindsay and Donaldson B91*
pulp; Washing apparatus suitable for treatment of —— and for other purposes. (P) McRae B415*
Recent methods of making —— from straw and reeds. Altmann B706
Removing printing colours from ——. (P) Ruffert B977
Rendering —— impervious to grease or to both grease and water. (P) Wright B90
safety-; Manufacture of ——. (P) Crane and Co. .. B251
sand-; Manufacture of ——. (P) Okie, and Minnesota Mining and Manuf. Co. B905
sheets; Manufacture of compound ——. (P) Roth B13
-sized with rubber latex; Permanence of ——. Beckerling-Vinckers B553
Sizing ——. (P) Kali Forschungs-Anstalt B939
sizing; Application of rubber latex to ——. Beckerling-Vinckers B506
Sizing —— in the form of pulp. (P) Pelzer B331
sizing; Rôle of electricity in mechanism of ——. Thiriet and Delcroix B784
sizing with rubber latex. Fenchel B742, B976
Sizing tests for ——. Caust B250
stock; Means for recovering —— from refuse. (P) American Reduction Co. B170*
Supply of pulp to beaters or poachers in manufacture of ——. (P) Medhurst B213*
Theory of rosin sizing of ——. Schwalbe B11
Vulcanisation of rubber-latex ——. (P) Kaye B593*
Weighting —— in bulk. (P) Rohland and Stolze B977
Paraffin; Conversion of solid —— by heating under pressure in the presence of hydrogen, methane, and other gases. Waterman and Perquin B500
hydrocarbons; Determination of —— in technical gas analysis. Tropsch and Dittrich B897
hydrocarbons; Physical properties of ——. Wilson and Bahlke B243
oil. *See under* Oils, Hydrocarbon.
wax; Adsorption of resinous substances and ——. Gurwitsch and Tschernojukow B661
wax; Apparatus for sweating or crystallising ——. (P) Burmah Oil Co., and others B165
wax; Centrifugal bowls for separating —— from mineral oils. (P) Hapgood, and De Laval Separator Co. .. B47
wax; Centrifugal removal of —— from petroleum lubricating oils. Jones B7
wax; Determination of setting time of ——. Fricke .. B858
wax; Extracting —— from oils. (P) Weir B822
wax; Filtration of —— from chilled oil. (P) Glair and others B47
wax or the like; Apparatus for sweating or crystallising ——. (P) Allan and others B780*
wax; Removal of —— from mixtures of hydrocarbons. (P) Neumann B48
wax; Solvent-index of refraction method of determining oil in ——. Wilson and Wilkin B162
wax; Transformations caused by heating mixtures of brown coal and —— in the presence of hydrogen or carbon monoxide in closed vessels. Waterman and Kortlandt B898
wax; Treatment of —— by heating under pressure with sodium formate and with carbon monoxide and water respectively. Waterman and Kortlandt B898
wax; Treatment of —— with steam. Von Walther and Steinbrecher B777
wax; Velocity of oxidation of ——. Francis and others .. B285
Paraffins: Ignition of mixtures of —— with air by a heated surface. Mason and Wheeler B897
Ignition of mixtures of —— with air by the impulsive electrical discharge. Wheeler B897
Solid —— of petroleum. Rakusin B702
Solubility of solid —— and solidifying temperatures of material containing them. Ssachanow and Wassiliew .. B1003
Paraldehyde; Action of —— upon proteins and lipins. Cooper B964
Manufacture of resinous substances from ——. (P) Ellis .. B756
Parasiticides; Manufacture of arsenical ——. (P) Vogel .. B995
Parchment paper. *See under* Paper.
Particle size; Determination of distribution of ——. Kelly .. B892
size; Determination of —— and of distribution of size of particles by centrifugal methods. Svedberg and Nichols B117
Passivity of metals, especially of iron. Müller B912
Phenomena of —— and cathodic overvoltage. Liebreich and Wiederholt B790
Pasteboard; Production of —— from disintegrated straw, peat, heather, etc. (P) Planson's Forschungsinst. B52
Pavement composition. (P) Fairlie, and Tennessee Copper and Chemical Corp. B831
Pavo cristatus; Fat from ——. Rae B264

PAGE

Peach; Non-volatile acids of the ——. Nelson B996
Peafowl; Fat from ——. Rae B264
Pea-nuts; Treating —— for food. (P) Townsend, and Lever Bros. B1026
Pearl, mother-of-; Manufacture of imitation ——. (P) Paisseau B507
Pearlite in steel; Troostite, sorbite, and ——. Schrader B385
Peat: Availability of nitrogen in ——. Lipman and Wank .. B1022
-bogs; Reducing the percentage of water in ——. (P) Ten Bosch B163
-briquettes. *See under* Briquettes.
Cellulose from fibrous ——. (P) Koch A.-G. B374
of the chalky valleys of the North of France; Characters of the ——. Demolon and Dupont B721
deposits; Stratigraphic study of ——. Dachnowski B394
Dry distillation and carbonisation of ——. (P) Pohl B8
dryers:
(P) Hoffman B662
(P) Lumsden B740
Drying, carbonisation, and distillation of ——. Roux B776
Drying —— with steam. (P) Strache B898
Enrichment of ——. Stadnikow B545
-forming plants; Production of salts of water-soluble acids from ——. (P) Brat B537
hydro-; Coagulation of —— by means of gypsum and its effect on rate of dehydration and condition of the drying beds. Stadnikov and Ivanovsky B973
and the like; Preparation of uniformly dehydrated ——. (P) Jirotka B878
and like substances; Distilling and gasifying ——. (P) Seigle B780*
Machine for drying ——. (P) Brien and Plamondon B325
Manufacture of decolorising carbon from ——. (P) Leadbeater B900*
Manufacture of high-quality fuel from raw ——. (P) Linker .. B662
Manufacture of paper from ——. (P) Planson B52*
Manufacture of useful products from ——. (P) Hinselmann .. B548
and other vegetable substances; Saccharification of —— by dilute acids. (P) Moser and Von Pezold B844
Preparation of a decomposition product of humic acid from ——. (P) Dyckerhoff B769
Preparation of plastic masses suitable for insulating purposes from ——. (P) Planson B641
Production of air-dried ——. Report of Fuel Research Board B284
Production of cellulose from fibrous ——:
(P) Koch A.-G. B1009
(P) Runkel, and Koch A.-G. B1009
Production of cellulose and half-stuff for manufacture of paper pulp and paper from ——. (P) Koch and Runkel B593*
Rapid drying of ——. (P) Hinchley and others B1003
Reduction or hydrogenation of ——. (P) Fischer and Schrader B84
Remedy for treatment of disease from ——. (P) Tilton and Timms B692
Separating water from ——. (P) Soderlund and others B780*
Treatment of ——. (P) Hindshaw, and Hindshaw Engineering and Development Co. B547
Utilisation of ——. (P) Brandes B45
Wet-carbonisation of ——. Odén and Unnerstad B817
Pecan oil. *See under* Oils, Fatty.
Pectic substance of sugar cane fibre. Farnell B106
Pectin content of cane juice, syrup, and molasses, and its removal. Farnell B920
Determination of —— in fruit and fruit products. Wichmann B70
Dry powdered jelly base containing ——. (P) Leo and Leo .. B1027
Extraction of —— from the fruit rind of the lime. Hardy .. B533
free from protein and starch. (P) Crawford B1027
gels containing sugar and acid; Effect of calcium chloride on ——. Halliday and Bailey B650
product. (P) Jameson and others B727
solutions; Gel-forming power of ——. Wendelmuth B612
solutions used in jam making; Presence of starch in ——. Perrier B689
Pectins; Application of biochemical method of characterising galactose to study of composition of ——. Charpentier .. B27
Preparation of ——. (P) Ehrlich and Kutzner B440
Pelargonidin chloride; Synthesis of ——. Pratt and Robinson .. B246
Peltophorum africanum; Composition of wood of ——. English .. B742
Pentaborates; Manufacture of alkali ——. (P) Kelly B173
Pentaerythritol; Production of ——. (P) Rheinisch-Westfälische Sprengstoff A.-G. B538
Pentathionic acid; Preparation of ——. Raschig B827
Pentosan content of cane juice, syrup, and molasses, and its removal. Farnell B920
Pentosans; Action of dilute sodium hydroxide and cuprammonium solutions on ——. Schorger B250
Caustic potash fusion of xylan. Heuser and Roth B395
Determination of ——:
Macheleidt B116
Pervier and Gortner B68
Development of —— in barley during germination. Van Laer and Masschelein B271
Utilisation of vegetable materials containing —— for production of furfural etc. (P) La Forge and others B76
in wood cellulose; Determination of ——. Powell and Whittaker 35T, B373
Pentose sugars; Fermentation of solutions containing —— with the production of acetic acid and lactic and other organic acids. (P) Fred and Peterson B569
Pentoses; Detection of ——. Sumner B204
Determination of ——. Pervier and Gortner B68
Fermentation of —— by *Bac. granulobacter pectinovorum*. Peterson and others B383
Light absorption of pigment formed in orcinol reaction for ——. Scheff B724
Spectrophotometric determination of ——. Scheff B724

PAGE

Pepper substances. Chavicine of black pepper. Ott and Lüdemann .. B276
substitutes; Production of ——:
(P) Ott B493
(P) Staudinger B397
taste: Relations between chemical constitution and ——. Riccomanni B443

Peppermint oils. *See under* Oils, Essential.
Volatile oil of Manchurian ——. Nakao and Shibue B33

Pepsin; Determination of —— and its behaviour in the body. Voigt B32
digestion; Application of Folin's method for determination of amino-nitrogen to ——. Uwatoko B961
Evaluation of ——. Van Urk B444

Peptone; Active principles of ——. Clark B488
Properties of constituents of ——. Abel and Geiling B488
Rôle of bacteria in lactic acid fermentation of dextrose by ——:
Acklin B28, B69
Baur B28

Perchlorate; Microchemical determination of ——. Pamfilov and Jofinov B828

Per-compounds; Anode for forming ——. (P) Baum, and Chem. Fabr. Weissenstein B101*

Perfumery extract. (P) Grunenberg and others B732
extracts; Preparation of ——. Schiftan B926
substances; Analysis of ——. Durrans B731

Perfumes; Bactericidal value of ——. Bryant B765

Perhydrol. *See* Hydrogen peroxide.

Perilla oil. *See under* Oils, Fatty.

Periodate; Formation of —— by action of permanganate on iodine compounds. Lang B214

Permalloy; Reluctivity of ——. Kennelly B560

Permanganate and manganate ions; Equilibrium between ——. Schlesinger and Siems B940

Peroxides; Obtaining organic —— in a finely divided condition. (P) Ver. Chem. Werke, and others B576

Peroxydase of the mangold; Thermostability of the ——. Gallagher .. B346

Peroxydases; Investigation of substances which are capable of behaving as ——. Gallagher B346

Per-salts; Improving the stability of ——. (P) Noll B980

Persilicates; Preparation of ——. Erdenbrecher B556

Persulphate; Detection of —— in flour. Miller 239T

Perylene; Manufacture of ——. (P) Comp. Nat. de Matières Colorantes et Prod. Chim. B654

3.10-Perylenequinone; Manufacture of ——. (P) Pereira B368

Perylenetetracarboxylic acid and its derivatives; Preparation of ——. (P) Kalle and Co. B825, B825*

Petree process of sugar manufacture; Report on ——. Peck .. B437

Petroleum; Adsorption of resinous substances and paraffin wax from ——. Gurwitsch and Tschernojukow B661
Apparatus for refining ——. (P) Watson B47
Aromatic hydrocarbons in Burmah ——. Mulaney and Watson 310T, B1002
ash. Thomas B547
of Burmah and Assam; Crude ——. Wilson B701
of Byoritsu, Formosa; Aromatic hydrocarbons in ——. Kurihara B1002
Composition of Japanese ——:
Komatsu and Kusumoto B408
Komatsu and Tanaka B499
containing paraffin wax; Properties of Grosny ——. Tytschinin and others B1003
Cracking of ——. Catalytic decomposition of hexahydro-aromatic and saturated aliphatic hydrocarbons. Grignard and Stratford B661
cracking process of Burton. Waterman and Reus B207
Crude —— of Maidan-i-Naftun. Dunstan B362
Crude —— of Sarawak. Kewley B363
from Czechoslovakia. Chorkavlev and Prunet B363
and its derivatives; Treatment of ——. (P) Setzler, and National Refining Co. B550
Destructive distillation of ——. (P) Stalli B459
distillates; Bauxite as a refining agent for ——. Dunstan and others 179T
distillates; Catalytic treatment of cracked —— in the vapour phase. Gray and Mandelbaum B857
distillates; Desulphurisation of Mexican —— by the "doctor" treatment. Sissingh B776
distillates; Hypochlorite process for purifying ——. Dunstan .. B500
distillates; Problems in refining of cracked ——. Morrell .. B547
Distilling and cracking ——. (P) Gray B47
emulsions; Electrical dehydrator for ——. (P) Harris, and Petroleum Rectifying Co. B210
Extraction of —— from petroleum-bearing sand. (P) Coogan B411
Formation of artificial —— from squalene and cholesterol. Kawai and Kobayashi B121
Fractional distillation for separation of constituents of ——. Peters, jun. B1002
fractions; Determination of unsaturated olefinic hydrocarbons, aromatic hydrocarbons, and saturated hydrocarbons in ——. Danaila and others B857
fractions; Manufacture of alcohols etc. from cracked ——. (P) Ellis and others B492
fractions; Purification of light ——. (P) Demoulins and Garner B665
hydrocarbons; Combustion of ——. Mabery B857
hydrocarbons; Solubility of ——. Mabery B857
and the like; Dehydrating crude ——. (P) Wikner, and Newcastle-upon-Tyne and Gateshead Gas Co. B590*
Lubricant and asphaltic hydrocarbons in ——. Mabery .. B120
Methods of decreasing evaporation losses of ——. Wiggins .. B242

PAGE

Petroleum—*continued.*
naphtha; Vapour pressure of light ——. Rhodes and McConnell B120
oils; Oxidation of —— by air. Tütünnikoff B624
oils; Production of water-soluble sulphonic acids from ——. (P) Humphreys and others B47
oils; Testing of —— for gasification. Holmes B363
oils; Treatment of ——:
(P) Clark and others B165
(P) Donaldson and others B899
(P) Weir B1005
Origin of ——. Formation of ceresin hydrocarbons from montan wax. Marcusson B660
of Plaza Huincul, Argentina. Izquierdo B586
Process for receiving volatile products from ——. (P) Bertsch, and Bertsch Process Co. B704
products; Bleaching —— with clay. (P) Stratford B900
products; Chemistry of "sweetening" of —— with sodium plumbite. Wendt and Diggs B1002
products; Cracking ——. (P) Kroll B286*
products; Interfacial tension between water and ——. Johansen B243
Reduction or hydrogenation of ——. (P) Fischer and Schrader B84
refinery emulsions; Centrifuging ——. Ayres, jun. .. B7
-refining agents; Action of —— on pure organic sulphur compounds dissolved in naphtha. Wood and others B1002
Refining —— with liquid sulphur dioxide. Edeleanu .. B44
refining; Rôle of adsorption in ——. Kauffman .. B243
Refining —— by sulphuric acid absorbed by capillary-active substances. Schulz B363
refining; Technical use of bauxite in ——. O'Brien .. 188T
refining; Treating acid sludge from ——. (P) Higgins, jun., and others B411
Relation between low-temperature tar, coke-oven tar, and ——. Schütz B461
residues; "Blowing" (oxidation) of ——. Marcusson and Picard B624
and similar hydrocarbons; Fractional distillation of ——. (P) Schmid and Fuchs B779
Solid paraffins of ——. Rakusin B702
spirit; Determination of naphthenes in ——. Ormandy and Craven B363
spirit; Examination of mixtures containing benzene, turpentine oil, and ——. Pritzker and Jungkunz B666
spirit; Reaction of cracked —— with formaldehyde. Ormandy and Craven B364
spirit. *See also* Benzine.
still gases; Treating —— to prepare chlorhydrins. (P) Brooks, and Chadeloid Chemical Co. B808
Supplies of crude —— in the Empire. Dunstan and Kewley B776
Treatment of ——:
(P) Clark B460*
(P) Dubbs, and Universal Oil Products Co. B460
(P) Hoge, and Bash Oil and Refining Co. B47
Treatment of crude ——. (P) Von Ditmar B704*

Petroleums; Viscosity-temperature curves of fractions of typical American ——. Lane and Dean B858

Phellandrenes; Smith and others B492

Phenanthrene series; Dyestuffs of the ——. Brass B246

Phenanthraquinone; Dyestuffs derived from ——. Sircar and Roy B412

Phenetidine salts of α- and β-naphthalenesulphonic acids; The o- and p- ——. Forster and Keyworth 301T

p-Phenetidine benzenemonosulphonate. Keyworth 342T
salts of 2·7- and 2·6-naphthalenedisulphonic acids. Forster and Keyworth 168T

o-Phenetidine 2·6-naphthalenedisulphonate. Forster and Keyworth 168T

p-Phenetolecarbamide. *See* p-Phenetoleurea.

p-Phenetoleurea; Detection of —— in vinegar or foodstuffs containing vinegar. Reif B111
Determination of —— in foodstuffs by means of xanthydrol. Reif B571
Manufacture of ——. (P) Sonn B34

Phenol; Catalytic reduction of —— under high pressure. Inoue B504
Electrochemical oxidation of alkyl ethers of ——. Fichter and Dietrich B277
-formaldehyde condensation product type; Production of articles of the ——. (P) Indurite Products Co., and Fairgrieve B756
and formaldehyde; Viscosity of syrupy condensation products of ——. Drummond 323T
Manufacture of ——. (P) Tyrer B705
Mononitration of ——. Arnall B462
Production of —— by bacteria. Sieke B147
Synthesis of ——. Killeffer B936
Vapour density of ——. Bürk B823
Velocity of nitration of ——. Arnall B201

Phenol-diketopiperazine complexes. Nature of the tanning process. Powarnin and Tichomirow B643

Phenolic condensation products; Manufacture of resinous ——. (P) Karpen and Bros. B953
substances; Manufacture of ——. (P) Tyrer B705

Phenols and aldehydes; Manufacture of derivatives of resinous condensation products of ——. (P) Meister, Lucius, u. Brüning B797, B840
and aldehydes; Manufacture of resinous condensation products from ——:
(P) Deutsch and others B604
(P) Meister, Lucius, und Brüning .. B604, B797, B797

PAGE

Phenols—*continued*.
and aldehydes; Reactions between ——. Van Itallie and Harmsma .. B730
Catalytic condensation of acetylene with ——. Wenzke and Nieuwland .. B247
Determination of hydrogenated —— in presence of some organic solvents, particularly hydronaphthalenes. Lindner and Zickermann .. B768
Extraction of —— from low-temperature tar oils. (P) Ges. für Teerverwertung, and others .. B589
and formaldehyde; Manufacture of artificial resins from ——. (P) Pollack and Möhring .. B63
and formaldehyde; Manufacture of resinous condensation products from ——. (P) Perl und Co. .. B879
and formaldehyde; Manufacture of resins from ——. (P) Bakelite Ges., and Hessen .. B566
Identification of —— by means of the spectroscope. Palkin and Wales .. B667
Preparation of ——. (P) Raschig .. B825
Preparation of —— which do not darken on standing. (P) Badische Anilin u. Soda Fabr. .. B367
present in peat tar. Börnstein and Kartzow .. B627
Purification of low-temperature tar ——. (P) Zeche Stinnes B740
Reduction of —— by heating with hydrogen sulphide under pressure. Schrader .. B327
Reduction of —— with tin at low temperatures. Zerbe .. B327
Thermal reduction of low-temperature tar ——. Fischer and others .. B287
Phenolsulphonic acids; Action of bromine on methyl esters of ——. Simon and Frèrejacque .. B444
Phenolsulphonic esters and salts; Determination of sulphur in ——. Simon and Frèrejacque .. B444
Phenoxides; Action of carbon dioxide on ——. Meyer .. B627
Phenyl styryl ketone. *See* Chalkone.
CC-Phenylalkylmethanedialkylsulphones; Preparation of ——. (P) Chem. Fabr. von Heyden .. B354
Phenylammonium salts; Mercuration of substituted ——. Kharasch and Chalkley, jun. .. B574
α-Phenylbiguanide; Salts of —— as accelators of vulcanisation. Romani .. B104
1-Phenyl-2·3-dimethyl-5-pyrazolone; Preparation of a liquid derivative of ——. (P) Kessler .. B811
See also Antipyrine.
Phenylenediamine; Benzenemonosulphonates of *m*- and *p*- ——. Keyworth .. 342T
salts of α- and β-naphthalenesulphonic acids; The *p*- and *m*- ——. Forster and Keyworth .. 302T
Phenylenediamines and their monoacetyl derivatives; Solubility of ——. Sidgwick and Neill .. B126
α-Phenylethylamine; Production of —— by electrolytic reduction of acetophenoneoxime. Ramsberg and Hemmerz .. B846
Phenylethylbarbituric acid; Characteristic reactions of ——. Ranwez .. B767, B846
Phenylguanidines; Reactions of —— with sulphur. Bruni and Levi .. B113
Phenylhydrazine salts of α- and β-naphthalenesulphonic acids. Forster and Keyworth .. 301T
2-Phenylquinoline-4-carboxylic acid; Hydriodides of esters of ——. (P) Shoule and others .. B890
Phenylureas; Preparation of derivatives of *p*-substituted ——. (P) Boehringer und Söhne .. B355
Phillipp continuous process for extraction of juice from beets. Danckwerts .. B67
Phlobotannins; Stiasny's test for ——. Ware .. B805
Phloroglucinol; Reaction of —— with formaldehyde. Zamparo B445
Phocenic acid; Identity of valeric acid and ——. André .. B479
Phosgene. *See* Carbonyl chloride.
Phosphate; Acid ——. *See* Superphosphate.
Phosphates; Comparative susceptibility of natural —— towards acids and its determination with citric acid. André and Copaux .. B990
Comparative susceptibility of natural — towards acids and its potentiometric determination. Copaux and Daric .. B990
Determination of chromium in natural ——. Grammont .. B460
Direct determination of secondary —— in presence of primary phosphates. Kugelmass and Rothwell .. B292
Dissociation of some acid —— by heat. Balarew .. B595
Effect of —— on respiration of plants. Lyon .. B269
Enrichment of —— by flotation. Berl and Pfannmüller .. B836
Fertilising action of disintegrated —— containing sodium and potassium. Graftiau and others .. B900
in highly ferruginous soils; Influence of silica, lime, and soil reaction upon availability of ——. McGeorge .. B759
Manufacture of ——. (P) Bramson .. B557
Manurial value of different ——. Niklas and others .. B842
Preparation and chemical nature of calcined ——. Guernsey and Yee .. B394
Preparation and mechanical treatment of ——. Verchovsky B1022
Preparation of precipitated —— from solutions of crude phosphates containing fluorine. (P) Badische Anilin u. Soda Fabr. .. B760
Rapid determination of available —— in soils. Atkins .. B483
Relative availability of phosphorus of superphosphate and raw rock ——. Wolkoff .. B345
Rhenania-; Valuation of ——. Volhard .. B346
Separation of —— from fluorides. Müller and Wagner .. B54
Solubility of natural —— in acid humus soils. Brioux .. B801
Treating mineral ——. (P) Bramson .. B557
Utilisation of indigenous —— as fertilisers in India. Hutchinson .. B269

PAGE

Phosphates—*continued*.
Utilisation of sulphur dioxide in waste gases for production of ——. (P) Spiegelmannfaktur Waldhof A.-G. .. B842
See also Hexametaphosphates, Metaphosphates, *and* Orthophosphates.
Phosphatic materials; Apparatus for smelting ——. (P) Klugh, and Federal Phosphorus Co. .. B633
Phosphine; Determination of —— in acetylene. Perks .. B161
Phosphor prints for detecting phosphorus segregation in steel. Canfield .. B424
Phosphor-bronze; Rapid determination of phosphorus in ——. Lindemann .. B872
Phosphor-bronzes; Analysis of ——. Guillissen .. B259
Phosphor-emetic. Sternlieb .. B312
Phosphor-manganese slag. *See under* Slag.
Phosphorescent zinc sulphide; Manufacture of ——. (P) "Alchemia" Allgem. Chem. Ind. A.-G., and Jahoda .. B1019
Phosphoric acid; Colorimetric micro-determination of ——. Terada .. B620
Detection of —— with benzidine. Frey .. B495
Determination of calcium, magnesium, potassium, and —— in grain and feeding-stuffs. Gilmour .. B651
Determination of —— by means of uranyl acetate. Jander and Reeh .. B80
Determination of —— in plant ashes by the conductivity method. Deshusses and Deshusses .. B1030
in eggs; Determination of acid-soluble ——. Plue .. B884
in fertilisers; Determination ——. Breckenridge .. B1022
Improvement in the lead method of separating —— in qualitative analysis. Balarew and Dotschewa .. B814
Influence of varying ratios of potash and —— on crop yield and nitrogen recovery. Blair and Prince .. B645
Manufacture of ——:
(P) Alcock, and Laporte, Ltd. .. B941*
(P) Bramson .. B557
(P) Klugh, and Federal Phosphorus Co. .. B632
Manufacture of anhydrous ——. (P) Gravell .. B787
Manufacture of pure ——. (P) Laporte, Ltd., and Alcock .. B596
Manufacture of —— by the volatilisation process. Waggaman B269
Micro-detection of ——. Feigl .. B236
Modification of Bell-Doisy-Briggs method for colorimetric determination of ——. Sjollema and Gieteling .. B357
in plant ashes; Conductometric determination of ——. Deshusses and Deshusses .. B928
Rapid determination of —— by the Copaux method. Daric B495
Removal of fluorine compounds from ——. (P) Carothers and others .. B419
Replacement of —— by potash silicates in volatilisation process of making ——. Ross and others .. B630
Volumetric determination of ——. Lematte and Delacroix .. B771
Phosphoric esters of phenols; Preparation of pure ——. (P) Badische Anilin und Soda Fabrik .. B891
Phosphorous acid; Bromometric determination of ——. Manchot and Steinhäuser .. B939
Determination of hypophosphorous acid and ——. Brukl and Behr .. B690
Oxidation of ——. Wieland and Wingler .. B74
Phosphorus; Application of a method of determining molybdenum to ammonium phosphomolybdate for indirect titration of ——. Vila .. B203
and arsenic; Separation of —— from mixtures. (P) Michael und Co. .. B944, B944
-arsenic smoke developers; Production of arsenic trioxide and phosphorus pentoxide from ——. (P) Chem. Fabr. Griesheim-Elektron .. B829
-arsenic smoke developers; Utilisation of ——. (P) Chem. Fabr. Griesheim-Elektron .. B36
in coal: its distribution and removal. Cawley .. B585
Colorimetric determination of ——. Briggs .. B581
-containing nuclear substance of milk casein; Preparation of the ——. (P) Soc. of Chem. Ind. in Basle .. B966
Determination of ——. Mudge, jun. .. B696
Determination of —— in ferrovanadium. Swoboda .. B715
Determination of organic ——. Baumann .. B582
Determination of small quantities of —— and its application to ammonium phosphomolybdate. Vila .. B37
Evolution of —— during course of germination of barley. Van Laer and Duvinage .. B101
Failure of test for —— in a case of phosphorus poisoning. Bartschat .. B496
Manufacture of potassium compounds and ——. (P) Klugh, and Federal Phosphorus Co. .. B557
in organic materials; Determination of ——. Garola .. B38
in organic substances; Micro-determination of ——. Lieb and Wintersteiner .. B970
in phosphor-bronze; Rapid determination of ——. Lindemann .. B872
Relation between glow of —— and formation of ozone. Downoy .. B293
in soils; Organic ——. Auten .. B26
vapour; Oxidation of ——. (P) Hechenbleikner, and Southern Electro-Chemical Co. .. B672
Phosphorus compound of milk casein; Manufacture of alkaline-earth compounds of organic ——. (P) Soc. of Chem. Ind. in Basle .. B314
Phosphorus oxides; Production of ——. (P) Klugh, and Federal Phosphorus Co. .. B557
Phosphorus pentachloride; Formation of —— from phosphorus trichloride and chlorine. Taylor .. B828

PAGE

Phosphorus pentoxide; Production of arsenic trioxide and —— from arsenic-phosphorus smoke developers. (P) Chem. Fabr. Griesheim-Elektron .. B829
Photochemical decomposition of silver chloride. Schwarz and Gross .. B618
Photoelectric activity; Formation of films of cuprous oxide having ——. Plonchon and Demora .. B718
cells; Coating composition for wires for ——. (P) Wood, and Fototone Co. .. B876
Photographic action of Becquerel rays. Wälder .. B314
after-processes; Simplicity of mechanism of reaction as one of factors conditioning catalysis in ——. Bullock .. B279
behaviour of silver halides in relation to their dispersity. Germann and Hylan .. B850
blue-print paper; Increasing the sensitiveness to light of ——. (P) Renker und Co. .. B813
blue-print paper; Preparation of ferro-prussiate ——. (P) Renker und Co. .. B538
coatings; Preparation of ——. (P) Boehringer Sohn .. B279
colour images; Preparation of direct and reversed ——. (P) Luther and Von Holleben .. B813
colour screens; Manufacture of ——. (P) Wieland .. B656
density; Measurement of ——. Bull and Cartwright .. B116
developing and fixing compositions; Combined ——. (P) Hashimoto .. B998
developing processes. (P) Troland, and Kalmus, Comstock, and Wescott, Inc. .. B655
development; Influence of stirring on rate and course of ——. Sheppard and Elliott .. B927
development; Method of quickly stopping ——. (P) Rehländer, and Projections A.-G. "Union" Filmfabr. B279
development papers; Time required for fixing ——. Lumière and others .. B538
diazotypes; Preparation of ——. (P) Kalle und Co. .. B356
dry plates; Protection of —— against depreciation by ageing. (P) Sonnenberg .. B356
dye-mordanting; Theory of ——. Bullock .. B997
emulsions; Cause of sensitivity of silver bromide ——. Thorne-Baker .. B770
emulsions; Desensitising silver bromide-gelatin ——. Stenger and Staammreich .. B655
emulsions; Factors affecting grain size in ——. Renwick .. B693
emulsions; Latent fog in ——. Lüppo-Cramer .. B234
emulsions; Preparation of colour sensitisers for ——. Richard and Abribat .. B77
emulsions; Preparation of gelatin for ——. (P) Kraus .. B78
emulsions; Relation between exposure and number of developable centres in ——. Svedberg and others .. B618
emulsions; Sedimentary analysis of ——. Renwick and Sease .. B770
emulsions; Sensitising silver bromide —— for green rays. (P) Meister, Lucius, u. Brüning .. B813
emulsions; Sensitiveness of the silver halide grains of ——. Clark .. B234
emulsions; Simplified method of making slow bromide ——. Scharlow .. B493
emulsions; Size-frequency distribution of grains of silver halide in —— and its relation to sensitometric characteristics. Photographic densities derived from size-frequency data. Wightman and others .. B732
films. (P) Haste, and Eastman Kodak Co. .. B618
films of asphalt and asphalt mixtures; Increasing the sensitiveness of ——. (P) Rieder .. B579
films with coloured laminated base. (P) Haste and others .. B451
films; Manufacture of ——:
(P) De' Sperati .. B655
(P) Morse .. B693
films; Manufacture of dull or roughened ——. (P) Oertel and others .. B812
films; Mensuration characteristics of ——. Ross .. B154
films; Non-inflammable celluloid for ——. (P) Auryunger .. B655
films; Preparation of non-shrinking ——. (P) Sulzer, and Eastman Kodak Co. .. B451
films and process of making them. (P) Kalle und Co. .. B315*
films; Process of treating ——. (P) Seel, and Eastman Kodak Co. .. B656
films; Progressive and retrogressive processes in silver halide ——. Schaum and Langerhanns .. B655
films; Thin films of nitrocellulose for ——. (P) Oertel and others .. B928
films for X-ray work. (P) Sulzer, and Eastman Kodak Co. B356
fixing solutions. (P) Bolton, and Cavendish's, Ltd. .. B693
fogging agents; Theory of action of hydrogen peroxide and ozone as ——. Clark .. B116
image; Development of the latent —— after fixing. Lumière and others .. B579
image; Latent ——. Lumière and others .. B732
images; Cause of coloration of whites in sulphiding of silver —— and means for its elimination. Lumière and others B234
images; Direct sulphiding of silver —— on paper by means of liver of sulphur. Lumière and others .. B234
images; Fixation of colouring matters by positive silver —— on glass or on film. Seyewetz .. B812
images; Preparation of coloured ——. (P) Naturfarben-Film Ges. .. B813
images; Production of —— by gradation of the action of chemical reagents. Stenger and Herz .. B235
images; Sulphide toning or intensifying of ——. (P) Shaw .. B494
iron printing processes. (P) Allott, and Allott, Jones and Co. B770
line and half-tone images; Production of ——. (P) Rieder .. B451
materials; Cyanide method for determination of silver in ——. Eggert .. B235
materials; Preparations for sensitising ——. (P) Eder .. B451

Photographic—*continued*.
materials; Removal of dust and moisture from air for treating ——. (P) Schmies, and Deutsche Luftfilter-Bauges. B655
negatives; Process for producing —— from non-transparent originals for use in preparing printing plates. (P) Ullmann and Werth .. B403*
paper for the ink-process; Preparation of ——. (P) Renker und Co. .. B579
papers; Manufacture of ——:
(P) Exportingenieure für Papier- u. Zellstofftechnik B315
(P) Jahn .. B813
(P) Schloemann .. B812
paper; Sensitising composition for blue-print ——. (P) Bertsch .. B771
pictures and diapositives; Production of single- and multi-colour ——. (P) Gleichmar and Vobach .. B618
pictures; Support with coating sensitive to light for production of coloured ——. (P) Schapovaloff .. B36
plate; Sodium arsenite and the ——. Clark .. B77
plates. (P) Hatt .. B656
plates; Fixing of ——. Limit of usefulness of fixing baths. Lumière and others .. B693
plates; Preparation of colour filters from ——. Schaede .. B279
plates; Prevention of halation on ——. (P) Zeltzy .. B771
plates; Properties of ——. Fabry and Buisson .. B693
plates; Reducibility of silver bromide in ——. Reychler .. B356
plates; Regeneration of fogged ——. Millhauer and Fiek .. B314
plates; Solarisation of ——. Scheffers .. B450
preparations; Titration method for determination of silver in ——. Marasco .. B928
print-out papers; Selenium toning of ——. Lumière and others .. B451
prints in colours; Production of ——. (P) Dufay .. B538
prints; Development of —— by use of diazoanhydrides. (P) Kalle und Co. .. B155*
process. (P) Ives .. B770
processes for obtaining direct positives by reversal. (P) Pathé Cinema .. B579
production of patterns on surfaces by means of sand-blasting. (P) Rieder .. B579
production of warm-tone lantern slides; relation between exposure, development, colour, and gradation. Thorne-Baker and Davidson .. B279
reproduction; Multiple-step process of ——. (P) John, and Daylight Film Corp. .. B356
reproduction process. (P) Doelker .. B78
reproduction processes, and media therefor. (P) Beebe and others .. B493
reproduction; Processes of ——, and photographic emulsions. (P) John, and Daylight Film Corp. .. B315*
reversal by hydrogen peroxide, sodium arsenite, and light. Clark .. B770
reversal processes. (P) Capstaff, and Kodak, Ltd. .. B967
screens; Production of multicolour ——. (P) Christensen .. B403*
sensitiveness of silver iodide. Germann and Hylan .. B35
sensitivity. Effect of oxidisers on the sensitivity and on the latent image. Sheppard and others .. B997
sensitivity; Grain size and ——. Rawling .. B693
sensitivity. Topochemistry of development and sensitising nuclei. Sheppard and others .. B154
silver images; Composition for toning ——. (P) Rehländer B770
silver images with a metallic base. (P) Chem. Fabr. Schering B813
solutions; Corrosion of Monel metal in ——. Crabtree and Matthews .. B733
solutions; Effect of electrolysis on rate of corrosion of metals in ——. Crabtree and others .. B200
toning baths; Compound for making ——. (P) Rehländer .. B538
toning; Method of nitro-sulphide ——. Shaw .. B116
toning process. (P) Rotophot A.-G. für Graphische Ind. .. B155
transfer films; Preparation of ——. (P) Fritz .. B967
Photography; Colloid chemistry and ——. Adsorption replacement and the latent image. Lüppo-Cramer .. B78
Colloid chemistry and ——. Development with ammonia. Lüppo-Cramer .. B927
colour-; Preparation of screens for ——. (P) Naturfarben-Film Ges. .. B279
Direct colour ——. (P) Martinez .. B997
Manufacture of multicolour screens for ——. (P) Christensen B998
Photomechanical printing. (P) John .. B451*
Photomechanical process. (P) Schwartz and Lentz .. B655
Photometer; Optical pyrometer as a brightness ——. Forsythe .. B452
Photometers. (P) Lux .. B772*
Absorption and diffusion ——. (P) Yernes and others .. B620*
Photometric determinations; Combined apparatus for polarimetric, spectrometric, and ——. (P) Jobin and Yvon .. B814*
Photosynthesis; Water content as a factor in ——. Dastur .. B1023
Photosynthetic sugars; Examination of —— by the methylation method. Irvine and Francis .. B957
Phthalein dyestuffs; Sulphonefluorescein and some derivatives. Orndorff and Vose .. B823
Phthaleins; Effect of sulphur on colour of certain ——. Holt and Reid .. B975
Phthalic acid; Removal of carboxyl groups from ——. Schrader and Wolter .. B575
Phthalic anhydride; Manufacture of ——. (P) Craver, and Barrett Co. .. B552
as reagent for hydrolysing proteins. Brigl and Klenk .. B31
Phthalimide; Manufacture of ——. (P) Green and others .. B370*
Phyllodulcin, a sweet principle of the leaves of *Hydrangea Thunbergii*, Sieb. Maniwn .. B729

Physiological activity; Relations between molecular weight and ——. Hypnotic properties of hydrobenzoin and its alkylated derivatives. Tiffeneau and Torres B197
Phytelephas macrocarpa; Hydrolysis of endosperm of —— by its own enzymes. Paton and others B532
Phytosterols; Detection and distribution of ——. Klein and Pirschle B197
of endosperm of maize. Anderson B691
of wheat endosperm. Anderson and Nabenhauer B729
Phytotoxins; Protoin ——, with special reference to "modeccin." Green and Kamerman B491
Picric acid; Manufacture of ——. Reed B201
Precipitate formed by adding strong acids to aqueous solutions of —— as a test for picric acid and for strong acids. Denigès B235
Preparation of —— from phenol. Olsen and Goldstein .. B201
Production of normal lead salt of ——. (P) Thomas and others B618
Specific heats of trinitrotoluene, tetryl, and —— and their molecular complexes. Taylor and Rinkenbach .. B693
Picrolonic acid; Use of —— for micro- and histological detection of calcium. Kisser B202
Picryl sulphide; Industrial preparation of ——. Giua B579
Pigment colours; Preparation of ——. (P) Badische Anilin und Soda Fabrik B392
Pigments; Antimony oxide ——. Coffignier B796
of Australian acacias; Yellow ——. Petrie B935
Chemico-mechanical process for production of unalterable white ——. (P) Dworzak B604
Effect of iron oxide —— on rate of oxidation of linseed oil. Rhodes and others B916
Enzymic formation of —— as an aid to classification. Schmalfuss B935
Formation of ——. Schmalfuss and Werner B935
Identification of insoluble azo ——. Rowe and Levin .. B704
Manufacture of ——:
(P) Bachman B566
(P) Eberlein B141, B480
(P) Fireman, and Magnetic Pigment Co. B520
Manufacture of —— for anti-rust paints. (P) Carteret and Devaux B185
Manufacture of ferric ——. (P) Saunders, and Chemical Specialties Co. B641
Manufacture of ferruginous black ——. (P) Elbe B433
Manufacture of red cadmium ——. (P) Bayer und Co. .. B433
Manufacture of titanium ——. (P) Bachman B500
Manufacture of —— together with hydrogen chloride. (P) Chem. Fabr. Griesheim-Elektron B392
Manufacture of white ——. (P) Tyrer B720
Manufacture of zinc oxide and zinc-lead oxide —— from complex ores. Hall B338
Microchemistry of white ——. Green B681
Mills for grinding ——. (P) Torrance B238
Plant ——. Heilbron 89T, B935
Properties of titanium oxide ——. Binder B796
Size of particles, with special reference to ——. Klein and Parrish B526
U.S. Government specification for dry and paste titanium —— B432
d-Pimaric acid. Ruzicka and Balas B965
l-Pimaric acid. Ruzicka and others B570
Pine; Acids contained in oleo-resin of Aleppo ——:
Dupont B839
Dupont and Desalbres B839
Paper pulp from maritime ——. Michel-Jaffard B783
wood; Alkoxyl groups of —— and of the lignin prepared from it. Hägglund and Sundroos B592
wood oil. *See under* Oils, Essential.
Pinene; Synthesis of α- and δ- ——. Ruzicka and Pontalti .. B576
β-Pinene; Oxidation products of ——. Henderson and Chisholm B278
Pinenes; Determination of chlorine in commercial ——. Gawalowski B996
Pinoresinol and the natural resin of pine. Zinke and others .. B878
Pinus maritima; Resins and oils from wood of ——. Dupont and Michaud B796
Pinus pinea; Essential oil of ——. Dupont and Barrand .. B015
Piper methysticum; Chemistry and pharmacology of ——. Schübel B760
Piperitone; Constitution of ——. Read and others B278
Electrolytic reduction of ——. Penfold and Morrison .. B926
Reduction of ——. Hughesdon and others B153
Piperonal. *See* Heliotropin.
Pipes for conveying acids and gases; Preparation of ——. (P) Zerkowitz B407
Lining of pitch etc. for —— and method of applying it. (P) Brown B774*
for use when immersed in chemical liquids. (P) Judson and others B82
Pipette; Absorption —— for gas analysis. Saunders B110
Pita fibre; Colombian ——. Bunting B741
Pitch; Artificial bitumen from coal-tar —— (P) Lacau .. B900
Carbonisation of ——. (P) Rhodes and others B820
Determination of softening point of ——, especially of high-melting pitch, and of constituents insoluble in pyridine. Dunkel B627
lining for pipes and method of applying it. (P) Talbot .. B774*
Obtaining stable aqueous emulsions of ——. (P) Thornley and others B780

Pitch—*continued*.
Production of colloidal dispersions of ——. (P) Plauson's Forschungsinst. B327, B503
Removing acid constituents from ——. (P) Fischer .. B287
for roofing; U.S. Government specification for coal-tar —— B860
for waterproofing and damp-proofing; U.S. Government specification for coal-tar ——. B666
Plant cell-membrane; Determination of —— in efficiency experiments. Thomas and Kapfhammer B309
cells; Extraction of nitrogenous constituents from ——. Tottingham and others B319
growth; Comparison of sand and solution cultures with soils as media for ——. Hoagland and Martin B189
growth-promoting substances; Formation of —— by micro-organisms. Mockeridge B1023
juices; Method for determining hydrophilic colloid content of expressed ——. Newton and Gortner B309
materials; Treatment of liquors obtained in alkali treatment of ——. (P) Colas and others B70
parasites; Means for combating animal and ——. (P) Meister, Lucius, u. Brüning B845
pigments. Heilbron 89T, B935
tissue; Effects of methods of desiccation on nitrogenous constituents of ——. Link and Schulz B885
tissue fluids; Determination of moisture content of expressed ——. Gortner and Hoffman B309
tissues; Effect of certain extracts of —— on florid rickets. Shipley and others B444
Plants; Absorption of carbon by roots of ——. Breazeale .. B305
Absorption of ions by ——. Hoagland .. B143
Absorption of ions by root systems of ——. Stoklasa .. B882
Action of end products of metabolism on ——. Sigmund .. B773
Auxinones and the growth of green ——. Clark and Roller B484
Carbon dioxide production of plant roots as a factor in the feeding power of ——. Parker B484
Coagulation, and life of ——. Amar B437
Do green —— have the power of fixing elementary nitrogen from the atmosphere? Lipman and Taylor B956
Improving the adhesion of disinfectants on ——. (P) Tietz B843
Influence of —— on the air in greenhouses. Rigg and others B722
Isolation of an inhibitory substance from ——. Mallmann and Hemstreet B1023
Mechanism of oxidation in ——. Gallagher B346, B346
Method for sterile culture of higher ——. Bobko B305
Nitrate-reducing properties of ——. Anderson B1023
Photoperiodism in relation to hydrogen-ion concentration of cell sap and carbohydrate content of ——. Garner and others B607
Pot-culture experiments on —— with an electric discharge. Blackman and Legg B483
Response of —— in soil- and water-cultures to aeration of the roots. Knight B606
Solutions for spraying ——. (P) Raschig B442
Theory of assimilation of carbon dioxide by ——. Ostwald B143
Plaster flooring-; Colloidal theory of setting of ——. Haddon and Brown 14T
Inadequate hardening of lime ——. Nussbaum B517
and the like containing rubber. (P) Lefebure B676
Manufacture of ——. (P) Mulligan B176, B789*
and method of controlling its setting. (P) Wiggin's Sons Co. B911*
of Paris; Heat-effects which accompany the setting of ——. Chassevent B714
of Paris; Means for prolonging the setting time of ——. (P) Kirchner, and Landshoff und Meyer B1014
of Paris; Setting of ——. Jolibois and Chassevent B517
Preventing efflorescence on gypsum ——. Welch B830
sheets and moulded articles; Cementitious composition for making ——. (P) Dunstan B176
wall board. (P) Haggarty B1014
Wall ——: Ingredients, preparation, and properties .. B599

Platinum—*continued.*
substitutes. Gawalowski B984
Substitution of Borchers' metal for —— in electro-analysis. Bleesen B202
-tantalum alloys. (P) Duparc B388
Platinum oxide as catalyst in reduction of organic compounds. Preparation of primary alcohols by catalytic hydrogenation of aldehydes. Carothers and Adams B730
as catalyst in reduction of organic compounds. Reduction of furfural and its derivatives. Kaufmann and Adams B152
Podophyllin. Dott B113
Poison gases; Preparation of dyestuffs from —— through 2-aminothiazoles as intermediates. Bogert and Chertcoff .. B1006
Poisons; Purification, and identification by micro-analysis, of vegetable —— isolated from bodies. Yllner B963
Polarimetric apparatus. (P) Hilger, Ltd. B540*
determinations; Combined apparatus for photometric, spectrometric, and ——. (P) Jobin and Yvon B814*
Pollopas, a new synthetic colloid. Pollak and Ripper B878
Polyalkoxyarylaminopropanes and their N-monoalkyl derivatives; Preparation of ——. (P) Wolfes and others B891
Polyamyloses; Constitution of ——. Pringsheim and Leibowitz .. B530
Halogen compounds of ——. Pringsheim and Steingroever .. B921
Polyfatty-acid esters; Manufacture of ——. (P) Zollinger and Grün B343*
Polygala amara; Saponins of ——. Glaser and Krauter B924
Polypeptides composed of amino-acids not yet found among the degradation products of proteins; Enzymic degradation of ——. Abderhalden and Moschini B227
Titration of amino and carboxyl groups in ——. Harris.. .. B203
Polysaccharides. Cleavage of lichenin into dextrose. Karrer and Staub B568
Constitution of ——. Esparto cellulose. Irvine and Hirst .. B249
Constitution of ——. Molecular structure of β-hexa-amylose. Irvine and others B531
Lichenase. Karrer and Staub B957
Lichenase and reserve cellulose (lichenin). Karrer and others .. B249
Methylation products of reserve-cellulose (lichenin). Karrer and Nishida B373
Occurrence of lichenin in lichens and other plants. Karrer and others B250
Properties of γδ-dihydroxycarbonyl derivatives and their bearing on the polymerisation of ——. Hibbert and Timm.. .. B168
Reserve cellulose (lichenin). Karrer and Staub B957
Separation of lichenase into its constituent enzymes. Karrer and others B272
Polysaccum crassipes, D. C.; Colouring matter in ——. Marchaud .. B861
Polysulphides; Manufacture of alkali ——. (P) Sutherst, and Herbert and Herbert, Inc. B511
Polythionates; Formation and decomposition of ——. Josephy .. B594
Polythionic acids; Preparation and properties of ——. Raschig .. B827
Pousol Blue G. *See under* Anthracene dyestuffs.
Poppyseed oil. *See under* Oils, Fatty.
Porcelain; Burning ——. (P) Dressler, and American Dressler Tunnel Kilns, Inc. B335
Electric arc furnace for burning ——. (P) Siemens-Schuckertwerke Ges. B134
Genuine hard ——. Reichau B712
glazes. *See under* Glazes.
Glazing and waterproofing ——. (P) Potter and others B58
Metallising —— with aluminium. (P) Kraus und Co. B914
Properties of technical —— from the State Porcelain Factory, Berlin. Rieke B168
substitute; Production of ——:
(P) Claasz B515
(P) Hoskins, and Economy Fuse and Manuf. Co. .. B1013
Pork; Biological value for maintenance and growth of proteins of ——. Mitchell and Carman B884
frozen; Vitamin A in ——. Wright B110
Porosimeter; Simple brick ——. Pressler B381
Porous bodies; Liquid-tight coating on ——. (P) Soc. Anon. le Carbone B986
bricks, blocks, slabs, and the like; Manufacture of ——. (P) McDermott and McLaren B676
building materials; Manufacture of ——. (P) Bayer .. •.. B1014
materials; Impregnating ——. (P) Besenfelder B831
materials; Manufacture of —— for use in electric batteries etc. (P) Hilditch and others B22
Porphyrins; Natural ——. Ooporphyrin. Fischer and Kögl .. B125
Posidonia fibre; Cellulose of ——. Earl B782
fibre; Chemistry of ——. Earl B168
Potash; Absorption of —— by humic acid. Charriou B920
from cement dust; Concentration by elutriation. Fox and Whittaker B944
Determination of —— in soils. Dodd B269
Extraction of —— from orthoclase felspar. Whyte B253
industry waste liquors; Manufacture of magnesite from ——. (P) Brinkhuff B95, B421
Influence of a deficiency of —— on development of barley when manured with different amounts of sodium nitrate. Wiessmann B305
Influence of varying ratios of phosphoric acid and —— on crop yield and nitrogen recovery. Blair and Prince B645
works; Utilisation of end liquors from ——. (P) Klermayor .. B133
Potassium; Crystal precipitation reactions of ——. • Rosenthaler .. B851
Detection of sodium and —— by a wet method. Longinescu and Chaborski B317
Determination of phosphoric acid, calcium, magnesium, and —— in grain and feeding-stuffs. Gilmour.. .. .. B651

PAGE

Potassium—*continued.*
Gravimetric and volumetric determination of ——. Strecker and Jungck B37
Hicks' method of determining ——. Wells and others B893
Light filter for use in detection of ——. McCoy B156
Perchloric acid method for determining —— in soils, fertilisers, etc. Page B269
Rapid determination of ——. Bulli and Fernandes B453
Replacement of —— from solutions of its salts by magnesium and aluminium. Bergstrom B132
Sodium 6-chloro-5-nitro-*m*-toluenesulphonate, a new reagent for ——. Davies and Davies B36
and sodium and their fused chlorides; Equilibrium between ——, and production of alloys of alkaline-earth metals and lead. Jellinek and Tomoff B873
Supposed liberation of —— from the soil by calcic and magnesic additions. MacIntire and others B27
Potassium aluminium silicates; Utilisation of ——. Montemartini and Losana B130
Potassium ammonium nitrate; Manufacture of ——. (P) Meister, Lucius, und Brüning B95
Potassium antimoniate; Preparation of ——. Schou B594
Potassium bicarbonate; Electrolytic production of ——. (P) Chem. Fabr. Griesheim-Elektron B95*
as standard in acidimetry. Bruhns B316
Potassium bichromate; Antiseptic power of ——. Sartory and Sartory B442
Decomposition of —— in aqueous solution. Sabalitschka and Kubisch B556
Potassium carbonate; Action of —— on lead glass. Coad-Pryor 27T, B944
Solubility of —— in water. Rubtzow B54
solution and carbon dioxide. Sieverts and Fritzsche .. B594, B594
as standard in acidimetry. Bruhns B316
Potassium chlorate; Accurate evaluation of —— by Bunsen's method. Wagner B631
Decomposition of —— and its catalysis by potassium chloride. Otto and Fry B377
Potassium chloride; Application of van't Hoff's diagrams to study of problems connected with production of ——. Walter .. B866
Composition of sylvinite and of the —— produced therefrom. Horst B940
Development of production of —— in the Upper Rhine since 1919, and the present problems attached thereto. Bucherer B866
Equilibria used in manufacture of —— from kelp brines. Turrentine and Tanner B376
field in the quinternary system of oceanic salt deposits; Polytherms of the four-salt points of the ——. Scrowy B630
-potassium hydroxide-water; The system ——. Von Antropoff B1011
Preparation of —— from *Hartsalz* and sylvinite. (P) Kali-Forschungs-Anstalt, and Friedrich B511
Production of —— from carnallite. (P) Kali-Forschungsanstalt, and Friedrich B421
-sodium chromate and sodium chloride-potassium chromate; The reciprocal salt-pair ——. Robertson 334T
The system water-magnesium chloride ——. Keitel B54
Potassium chromate-sodium chloride and sodium chromate-potassium chloride; The reciprocal salt-pair ——. Robertson .. 334T
Use of —— in iodometry. Jander and Beste B619
Potassium compounds; Manufacture of —— and of phosphorus. (P) Klugh, and Federal Phosphorus Co. B557
Potassium fluoride as preservative for blood. Major B614
Potassium guaiacolsulphonate; Preparation of ——. Decio .. B964
Potassium hydroxide-potassium chloride-water; The system ——. Von Antropoff B1011
solution; Manufacture of —— with simultaneous production of a highly basic base-exchanging aluminosilicate. (P) Rhenania Ver. Chem. Fabr. A.-G., and Messerschmitt B204
Potassium nitrate; Manufacture of ——:
(P) Hampel, and Wolf und Co. B909
(P) Michael und Co. B507*
Production of ammonium chloride and ——. (P) De Haën .. B420
Production of calcium chloride and ——. (P) De Haën .. B421
Production of —— from crude potassium salts:
(P) Hampel B420
(P) Hampel, and Wolf und Co. B1013
Production of —— from sodium nitrate. (P) Michael und Co. .. B420
solutions; Photolysis of ——. Anderson, jun. B465
Potassium perchlorate; Influence of catalysts on production of —— by action of heat on potassium chlorate. Farmor and Firth B253
Preparation of —— from waste ammunition. (P) Carbonit A.-G., and Köhler B452
Potassium permanganate; Production of manganite for use in manufacture of ——. (P) Verein für Chem. u. Metall. Produktion B334
Reaction between arsenite and —— in alkaline solution. Feigl and Weiner B852
solutions; Stability of ——. Kolthoff and Smit B317
Spontaneous decomposition of ——. Kolthoff B404
as standard for iodimetry. Hendel B317
Standardisation of ——. Kolthoff B771
Standardisation of —— with ferrous ammonium sulphate. Kolthoff and Van Dijk B580
Standardisation of —— by means of metallic silver. Tananaeff B784
Potassium phosphate; Commercial preparation of ——. (P) Ross and Hazen B144
Potassium pyrosulphite; Manufacture of ——. (P) Michael und Co. B95
Potassium salts; Grain size of sludges produced in manufacture of ——. Kayser B906
salts; Recovery of magnesium salts and —— from natural brines and calcareous muds. (P) Silsbee B870

Procain—*continued.*
Local anæsthetic properties of isocaine, cocaine, butyn, and ——. Schmitz and Loevenhart B996
Proline; Importance of —— for growth. Sure B571
Propantriol. *See* Glycerol.
Propellants. *See under* Explosives.
Propionates; Production of —— by fermentation. (P) Sherman and Shaw B29
Propionic acid; Determination of acetic acid, butyric acid, and ——. Fyleman 142T, B399
Production of —— by fermentation. (P) Sherman and Shaw .. B29
Propionic fermentation. *See under* Fermentation.
Propylene as an anæsthetic. Brown B889
Prosopis juliflora beans; Chemical and structural study of ——. Walton B195
Protecting bodies affected by heat by means of substances which undergo chemical change with absorption of heat. (P) Lodemann B119
Protein degradation products; Derivatives of —— insoluble in gastric fluid. (P) Budde B770
molecule; Structure of the ——. Abderhalden and Komm B611, B611, B729
phytotoxins, with special reference to "modeccin." Green and Kamerman B491
potato-; Preparation of dry —— of good colour. (P) Presskartoffel-Werke Koehlmann B490
from spinach leaves; Spinacin, a new ——. Chibnall B961
-tannin compounds; Preparation of ——. (P) Bayer und Co. B402
Yeast —— as antigen. Lüers and Ottensooser B843
Proteins; Action of paraldehyde upon ——. Cooper B964
Action of quinones on ——. Morgan and others 354T
Analysis of ——. Plimmer and Shimamura B529
Analysis of ——. Action of nitrous acid upon the hexone bases. Plimmer B349
Analysis of ——. Determination of histidine and tyrosine by bromination. Plimmer and Phillips B532
Anhydride structure of ——. Aberhalden and Komm B925
Behaviour of —— on solution in phenols. Herzog and Krahn B644
Biological value of —— at different levels of intake. Mitchell B309
Constitution of ——. Troensegaard and Schmidt B312
Determination of biological value of ——. Mitchell B309
Determination of tryptophan content of ——. Fürth and Dische B611
Determination of tyrosine content of ——. Fürth B610
Enzymic degradation of polypeptides composed of amino-acids not yet found among the degradation products of ——. Abderhalden and Moschini B227
Formation of carbon dioxide during breakdown of —— in the autoclave. Ssadikov B188
Halogenated ——. Bromogluten. Vandevelde B1026
Humin formed by acid hydrolysis of ——. Condensation of indole derivatives with aldehydes. Burr and Gortner .. B574
Hydrolysis of —— in an autoclave containing nitrogen. Ssadikov B199
and their hydrolysis products; Determination of ammoniacal nitrogen in ——. Froidevaux B38
and their hydrolysis products; Possibilities of acidimetry applied to ——. Hirsch B772
Isoelectric points of some plant ——. Pearsall and Ewing .. B533
Method of determining isoelectric point of —— and its application to serum albumins of various animals. Michaelis and Nakashima B195
of milk serum; Separation of —— by the acetone method. Piettre B194
Nitration of ——. Lieben B611, B611
of oats. Lüers and Siegert B308
Oxidative and reductive decomposition of ——. Edlbacher and Erbach B611
Partial hydrolysis of ——. Aberhalden B148
Phthalic anhydride as reagent for hydrolysing ——. Brigl and Klenk B31
Physical chemistry of ——. Relation between amino-acid composition of casein and its capacity to combine with base. Cohn and Berggren B961
Physical chemistry of ——. Relation between composition of zein and its acid and basic properties. Cohn and others .. B961
Preparation of active digestive enzymes from ——. (P) Ehrenberg B762
Preparation of compounds of silver iodide and ——. (P) Parke, Davis and Co. B76
Reductive decomposition of —— and toxicity of the decomposition products. Troensegaard B611
Specific ash of ——. Mirsee B71
Structure of ——. Abderhalden and Stix B352
Supplementary relations among ——. Mitchell B309
Utilisation of decomposition products of —— in dyeing etc. (P) Bennert B906
of wheat bran. Isolation and elementary analysis of a globulin, albumin, and prolamine. Jones and Gersdorff B228
of white of egg; Separation of —— by the acetone method. Piettre B148
of whole wheat, eggs, and pork; Biological value for maintenance and growth of ——. Mitchell and Carman .. B884
Protopectin and some other constituents of lemon peel. Sucharipa B230
Prunol; Identity of urson and ——. Van der Haar B996
Prussian blue; Analysis of ——. Schmidt and Rassow .. B640
Extraction of hydrogen cyanide from coal gas and its direct conversion into ——. Delcève B5
Psicaine; Microchemical detection of ——. Rosenthaler B969
Synthesis of ——. Willstätter B846

Quebrachine. *See* Yohimbine.
Quebracho extract; Effect of sulphiting on properties of ——. Stiasny and Orth B528
extracts; Reactions of pure and sulphited —— and their mixtures with sulphite-cellulose extract B643
tannin; Presence of resorcinol nucleus in ——. Nierenstein B267
wood; Effect of sulphiting on tannin in ——. Moeller .. B343
Queensland nut (*Macadamia ternifolia*); Fatty oil of ——. Morrison and Morrison B915
Quicklime; Comparative test of —— for silica brick manufacture. Trostel B674
Specification for —— for manufacture of sand-lime brick. U.S. Bureau of Standards B383
Specification for —— for manufacture of silica brick. U.S. Bureau of Standards B383
Specification for —— manufacture of sulphite pulp B91
Specification for —— for use in causticising B91
Quinhydrone electrode; Application of —— to electrometric acid-base titrations in presence of air, and factors limiting its use in alkaline solutions. La Mer and Parsons B79
electrode; Use of —— for determination of amino-acids and of acid and basic functions. Harris B203
electrode; Use of —— for measuring hydrogen-ion concentration of tanning liquors. Hugonin B1020
Quinizarin and the like; Manufacture of ——. (P) Thomas, and Scottish Dyes, Ltd. B741*
Quinol; Oxidation of —— induced by metals. Aloy and Valdiguié B705
Oxydases, and oxidation of ——. Clarens B959
Preparation of ——. (P) Chem. Fabr. Schering B402
Quinoline; Preparation of aminoalkyl derivatives of ——. (P) Loewe B448
Quinoline dyestuffs:
Apocyanine, carbocyanine, and isocyanine series; Antiseptic action of compounds of the ——. Browning and others B691
Azocyanine; Synthesis of an ——. Hamer B667
2.4-Carbocyanine; Synthesis of a ——. Mills and Odams .. B934
Carbocyanines; New method of formation of ——. Mills and Braunholtz B155
Cyanine dyes. Mills and Braunholtz B155
Desensitising dyestuffs; Manufacture of ——. (P) Meister, Lucius, und Brüning B902
Dicyanines; Constitution of the ——. Mills and Odams .. B934
Kryptocyanine; Constitution of ——. Mills and Braunholtz B155
Studies on ——. Rosenhauer and others B551
Thioisocyanines; Constitution of the ——. Mills and Braunholtz B155
Quinone-imide dyestuffs; New syntheses of ——. Kehrmann and others B551
Syntheses in the group of ——. Colour of the simple quinone-imines. Kehrmann and Cordone B125
Syntheses in the group of ——. Steric influence in condensation of hydroxyquinones with *o*-diamines. Kehrmann and Buffat B125

Quinone-imide dyestuffs—*continued.*
Syntheses in the group of ——. Syntheses with 1-chloro-2.4-dinitronaphthalene. Kehrmann and Van Baerle .. B125
Syntheses in the group of ——. Syntheses of Induline 3B and 6B. Kehrmann and Klopfenstein B125
Quinonelmines. *See under* Quinoneimide dyestuffs.
Quinones; Action of —— on proteins. Morgan and others .. 354T
and allied compounds; Bactericidal action of ——. Morgan and Cooper 352T
Tanning with ——. Thomas and Kelly B918

R

Racemic amino-acids; Biochemical method for resolving ——. Hoppert B768, U1029
Radiating apparatus; Corrugated pipes for ——. (P) Amor .. B699*
Radioactive hides and skins, leather, furs and the like. (P) Tapparelli B481
Radioactivity and nitrogen-fixing bacteria. Kayser and Delaval B722
Radium; Action of —— on electric storage batteries. Hartenheim B430
Analytical methods for ——. Moore and others B620*
Determination of —— in natural titano-niobates. Karl and Lombard B15
Distribution of active deposit of —— in helium and argon in an electric field. Briggs U907
emanation; Absorbing ——. (P) Palmer B35
emanation; Apparatus for purification of ——. Hess .. B418
Extraction and recovery of —— from typical American carnotite ores. Barker and Schlundt U426
Extraction of uranium, vanadium, and —— from carnotite. Thews and Heinle B55
Separation of barium and ——. Chlopine B55
Raffinase; Identity of invertase and ——. Josephson B724
Raffinose; Constitution of ——. Haworth and others B190
content of molasses. Saillard B886
Determination of —— in sugars. Saillard B686
Rambutan tallow; Preparation of *n*-eicosanic acid from ——. Morgan and Bowen 347T
Ramie; Mercerising, dyeing, and finishing of ——. Marshall .. B170
Rancid fats; Compounds developed in —— and mechanism of their formation. Powick B302
Rancidity: Development of —— in fats. Tschirch and Barben .. B719
of fats; Quantitative aspects of Kreis test for ——. Holm and Greenbank B564
Rare earths. *See under* Earths.
Ray-liver oil. *See under* Oils, Fatty.
Rayan oil. *See under* Oils, Fatty.
Reactions; Effecting chemical —— in the interior of compressors. (P) Brutzkus B698
between gases and liquids; Apparatus for accomplishing physical and chemical ——. (P) Boulogne and Meillassoux U88
Catalytic ——. *See under* Reactions.
Facilitating physical and chemical —— in masses of loose material. (P) Deschamps B497, B697
Producing chemical ——. (P) Wittenstein U82
Recording or indicating any quantities or qualities at a distance; Apparatus for ——. (P) Roucka B454*
a number of physical or chemical values by means of the same recording apparatus; Apparatus for ——. (P) Roucka .. B496*
Recuperators for furnaces, and blocks for building them. (P) Posnack B498*
Red lead; Bromometric analysis of ——. Rupp and Siebler .. B466
as a paint pigment. Hickson and Snoke B755
Reductase test of milk; Influence of colloids in the ——. Virtanen B960
Reduction; Catalytic-electrolytic method of ——. Ishiwari .. B768
Irreversible —— and catalytic hydrogenation. Conant and Cutter B964
of metallic halides by hydrogen. De Carli B941
of organic compounds; Platinum oxide as catalyst in ——. Preparation of primary alcohols by catalytic hydrogenation of aldehydes. Carothers and Adams B730
of organic compounds: Preparation of palladous oxide and its use as catalyst in ——. Shriner and Adams B730
-oxidation processes manifest in biochemical processes; Mechanism of ——. Girard and Platard B455
Reductor; Use of cool solutions in the Jones ——. Lundell and Knowles B771
Redwood bark waste; Manufacture of artificial silk from ——. Greenbaum B904
Reeds; Manufacture of cellulose from ——. (P) Von Ordody B826, B826
Recent methods of making paper from ——. Altmann .. B706
Refractive index of a liquid; Determining the approximate —— with a common microscope. Kiplinger B495
Refractometers; Butyro and immersion ——. (P) Perry and Roberts B357
with temperature-compensating device. (P) Goerz A.-G. .. B734*
Refractories; Analysis of ——. Underwood B175
Behaviour of —— in glass-melting furnaces. Insley .. B910
Bonding high-temperature ——. Gosreau B1013

Refractories—*continued.*
Causes of variation in sizes of ——. Mellor B674
Determination of thermal conductivity of ——. Hersey and Butzler B468
Electrical resistivity of ——. Henry B981
for gas retorts, with special reference to silica. Emery .. B674
Influence of fluorine in the deoxidising slag on —— in basic electric furnace steel practice. Sisco B945
Manufacture of basic —— for open-hearth furnaces. (P) Meyer, and Davison Co. B514
Quantitative laboratory slag test for ——. Norton B910
Storage of silica ——. Rees B674
Refractoriness under load. Mellor B673
Refractory articles; Manufacture of ——:
(P) Brockbank, and Ross-Tacony Crucible Co. B423, B782
(P) Buffalo Refractory Corp. B134
(P) Cooper and Komet Laboratories Co. B559
(P) Forse, and Carborundum Co. B17
(P) Harty, and Exolon Co. U58
blocks and bricks for coke-oven walls, furnace linings, and the like. (P) Thornton and Illingworth B675
bricks; Comparative tests of porosity and specific gravity on different types of ——. Pressler B674
bricks; Manufacture of ——. (P) Sleurin B748
bricks etc.; Manufacture of —— from materials possessing plasticity at high temperature. (P) Duffield B1013
composition. (P) Ohman, and Buffalo Refractory Corp. .. B469
investment material. (P) McIntosh B134
materials; Behaviour of —— on heating. Desmasure .. B673
materials; Burning ——. (P) Buhl B423
materials; Effect of salty coal upon ——. Wilson B514
materials; Electric arc furnace for burning ——. (P) Siemens-Schuckertwerke Ges. B134
materials; Manufacture of highly ——. (P) Crawford .. B382
materials; Method of studying attack of molten slags and glasses upon ——. Rose B174
materials; Production of ——. (P) Schnabel B944
materials; Production of metallic coatings on ——. (P) Gronqvist B382
materials; Relation between ordinary refractories, under-load refractories, and composition, physical and chemical, of ——. Dale B673
materials; Softening of ——. Hirsch and Pulfrich B133
materials; Thermal conductivities of some ——. Buckner .. B218
metallic body; Composite ——. (P) Yessler B475
products:
(P) Kallen B982
(P) Taylor, and Taylor Sons Co. B598
substances; Action of high temperatures on some ——. Matignon B93
ware; Combustion in kilns burning ——. Sherman B381
Refrigerating apparatus:
(P) Brauer B240*
(P) Duclaux B973*
(P) Kasley, and Westinghouse Electric and Manuf. Co. B999
(P) McNutt, and Kitson Engineering Co. (London), Ltd. B543
(P) Norton, and Jeffries Norton Corp. B543
(P) Rumpler B39
(P) Smith and Marshall B456
(P) Smith and Riotte B321
apparatus; Absorption ——:
(P) Aktiebolaget Zander & Ingeström, and Hylander B999
(P) Siemens-Schuckertwerke Ges., and Altenkirch .. B4*
(P) Von Platen and others B321
fish and other substances by immersion in cooled brine. (P) Petersen U31*
machines:
(P) Lundgaard, and Automatic Refrigerating Co. U931
(P) Schmidt, and Westinghouse Electric and Manuf Co. U407
machines: Lubricant for ——. (P) Edwards, and Carbide and Carbon Chemicals Corp. B698
meat and other provisions. (P) Ogura U490
plants; Regulating flow of cooling water through ——. (P) Escher, Wyss, und Co. B737*
process:
(P) Buch and Groff B973*
(P) Kucher U621
process and machine. (P) Stewart B119*
system:
(P) Osbourn B118
(P) Thompson, and Carbide and Carbon Chemicals Corp. B621
systems; Preventing emulsification of the refrigerating agent in the sealing oil in ——. (P) Smith B360
Refrigerators. (P) Kasley, and Westinghouse Electric and Manuf. Co. B82, B896
Absorption ——. (P) Rumpler and Rennan B240*
Evaporators for ——. (P) Orr, and General Electric Co. .. B657
Paints of high luminosity for ——. Gardner and Parks .. B839
Refuse; Destructive distillation of house and other —— and recovery of products therefrom. (P) Box B46
destructor furnaces. (P) Lindsay B196*
Plant for treatment of urban ——. Bigot B490
Regenerators. (P) Tone, and Carborundum Co. B622
Continuous ——. (P) Hollings B405
Reinsch test for arsenic and antimony; Chemistry of —— and its extension to bismuth. Evans B37
Rennet; Action of heat and of —— on milk. Wright B348
Rennin; Destruction of —— by agitation: a case of catalysis at an air-liquid interface. Rideal and Wolf B726

Preparation of therapeutically active constituents of ——. (P) Boedecker .. B234
Solvent for ——. (P) Chem. Fabr. Kalk, and Oehme .. B527
used for varnish making; Microscopical examination of ——. Nicolardot and Coffignier .. B566
from wood of *Pinus maritima*. Dupont and Michaud .. B796

Resorcinol; Diphenceins from substituted diphenic anhydrides and ——. Adkins and others .. B823
Reaction of —— and its application to detection of nitroprussides and ammonia. Caseneuve .. B454
Reaction of —— with formaldehyde. Zamparo .. B445
Retort furnaces. *See under* Furnaces.

Retorts:
(P) Lamplough and Harper .. B698*
(P) Stahmann .. B458
Apparatus for charging —— used in manufacture of coal gas. (P) Drakes, Ltd., and Drake .. B460*
for carbonisation of solid fuels. (P) Queneau .. B974
Carbonising and revivifying ——. (P) Vachler .. B778
for continuous destructive distillation of carbonaceous substances; Vertical ——. (P) Glover and West .. B460*
for destructive distillation; Furnace for heating ——. (P) Morrison, and Dow Chemical Co. .. B8
for destructive distillation and oxidation. (P) Ott .. B209
for distillation of carbonaceous materials and for like purposes. (P) Hutchins .. B123
for distillation of shale, bituminous coal, and other materials. (P) Garland .. B8
for distilling corrosive liquids. (P) Howard, and Grasselli Chemical Co. .. B159
Furnace ——:
(P) McIntire, and International Coal Products Corp. .. B245
(P) McLaughlin and others .. B1004
and furnaces. (P) Bonnard .. B698*
for gasifying oil and tar. (P) Sharp and Bassett .. B625
Influence of construction of revolving —— on composition of low-temperature tar and motor spirit from coal. Hoffman .. B897
and the like; Manufacture of ——. (P) Hodson .. B748
Means for discharging granular and like material from ——. (P) Hutchins .. B83*
for mineral oils. (P) Lamplough and Harper .. B326
Rotary ——. (P) Nielsen and Laing .. B455
Rotary distillation ——. (P) Heyl .. B663
for treatment of materials such as shale, coal, and the like. (P) Guy-Pell .. B1004
Vertical ——. (P) Wallace, and Economic Carbonization Co. .. B933
Vertical —— for distillation and gasification of coal. (P) Stürmer .. B286

Retting flax, hemp, and other textile substances. (P) Kayser .. B128
of vegetable substances; Preparation of products for ——. (P) Carbone .. B13*
of vegetable substances; Preparation of products for ——. (P) Istituto Sieroterapico Milanese, and Carbone .. B11
Rhenania phosphates; Valuation of ——. Volhard .. B346
Rhetinols, a new class of phenols isolated from low-temperature tar. Edwards .. 153T
Rhodinol; Synthesis of inactive ——. Verley .. B615

PAGE

Rhodium; Separation of —— from platinum. Wichers .. B854
Rice husk in wheat bran; Detection and determination of ——. Marchadier and Goujon B844
 meal and husks; Composition and digestibility of ——. Honcamp and Pfaff B763
 plant; Action of gases produced by decomposition of genge (*Astralagus sinicus*) on growth of the ——. Onodera .. B647
 plant; Preventing harmful action on —— of gases produced by decomposition of genge (*Astralagus sinicus*). Onodera B647
Rice, wild; Nutritive properties of ——. Kennedy B488
Ricin. Karrer and others B614
Ricinine; Synthesis of ——. Späth and Koller B151
Rickets; Effect of certain extracts of plant tissues on florid ——. Shipley and others B444
Road-making; Binding material for use in ——. (P) Wake and Spence B219
 -making materials; Apparatus for making asphaltic ——. (P) Armstrong, Whitworth, and Co., and others B159
 -making materials; Drying and coating ——. (P) Baxter, Ltd., and Baxter B832*
 -making materials; Production of —— from tar. (P) Houffel B328
Roads; Compositions for making or waterproofing ——. (P) Meadows B676
Roaster residues; Preparation and smelting of ——. (P) Diehl B340
Rocks; Calcining ——. (P) Shaw and Bole B632
 Physical properties of silicate glasses and their possible bearing on the history of igneous ——. Turner B980
Roofing elements; Manufacture of —— by electrolysis. (P) Gillis, and Anaconda Sales Co. B749
 felt; Production of ——. (P) Commin B945*
Root systems of plants; Absorption of ions by ——. Stoklasa .. B882
Rosin; Extracting turpentine and —— from wood. (P) Sherwood and others B840
 Manufacture of ——. (P) Greenwood, and Pine Waste Products B987
 See also Colophony *and* Resin.
Rosemary oil. *See under* Oils, Essential.
Rubber; Acidity of raw ——. Whitby B917
 Action of anti-oxidisers on ageing of vulcanised ——. Pelizzola B435
 Ageing properties of sprayed ——. Stevens B187
 ageing test involving oxidation under pressure. Bierer and Davis B683
 Ageing test on fine Para and smoked sheet ——. Stevens .. B682
 Alteration in colloidal condition of —— by vulcanisation and by calcined magnesia as accelerator of vulcanisation. Feuchter B343
 articles; Manufacture of —— avoiding vulcanisation. (P) Wills B606
 articles; Manufacture of vulcanised ——. (P) Miller Rubber Co. B225*, B225*
 articles; Method of forming hollow inflated ——. (P) Dabney, and Miller Rubber Co. B187
 articles; Production of a compound for sealing pneumatic tyres and for preserving ——. (P) Warmund B64
 -benzene solutions; Consistency of ——. Herschel .. B917
 Bird-lime from halogen-substituted ——. (P) Thieme .. B64
 from buddings. Variability of rubber from individual buddings compared with rubber from seedlings. De Vries .. B604
 Changes in —— during vulcanisation by the hot process. Nauck and Lange B605
 coagulated with sodium silicofluoride; Effect of accelerators on ——. Stevens B756
 coatings; Electrodeposition of ——. (P) Sheppard and others B104
 coatings and fabrics; Application of Schopper tensile testing machine to measurement of adhesion of ——. Hock .. B798
 Colloid-chemistry of vulcanisation of ——. Kröger .. B64
 Colouring —— and production of coloured rubber-coated materials. (P) Plauson B266
 compositions:
  (P) Elektrizitätswerk Lonza B65
  (P) Lamb B567
 compositions; Manufacture of ——:
  (P) Acheson, and Acheson Corp. B343
  (P) Feldenheimer and Plowman B757
  (P) Fisher, and Goodrich Co. B25
  (P) Trumbull and others B641
 compositions; Manufacture of hard ——. (P) Felten und Guilleaume Carlswerk A.-G. B527
 compositions; Treating fabrics with ——. (P) Stevens and Dyer B527
 compositions for use in manufacture of boots, shoes, etc. (P) Russell and Broomfield B606
 Components of the serum of Hevea latex and their influence on the properties of the ——. De Vries and Spoon .. B104
 compounds containing sulphur; Producing metallic surfaces on ——. (P) Warren B841
 compounds; Method of mixing —— as used in manufacture of rubber goods, insulating paints and varnishes. (P) Russell and Broomfield B480
 Concretes, cements, plasters, and the like containing ——. (P) Lefebure B676
 Constitution of vulcanised ——. Boiry B187
 Covering —— with cellulose esters. (P) Ketschendorfer Kunstlederfabr. A.-G. B528
 Determination of free sulphur in ——. Zilchert B527
 Effect of opening new cuts in the tree on the properties of the —— produced. Stevens B24

PAGE

Rubber—*continued.*
 Effect of resting of trees from tapping on properties of ——. Stevens B64, B840
 emulsons; Manufacture of ——. (P) Kirschbraun B721
 Factors affecting the rate of vulcanisation of plantation ——. Bishop B141
 filaments or threads; Manufacture of ——. (P) Draemann .. B24
 goods; Manufacture of —— from latex. (P) Loomis and Stump B1020
 goods; Vulcanising ——. (P) Duke B954
 Hard ——. *See* Vulcanite.
 Hopkinson sprayed latex ——. B879
 Hydrogenation of natural and artificial ——. (P) Siemens und Halske A.-G. B435
 Important variable in raw ——. Twiss and Jones B64
 Impregnating fibres, fibrous and cellular materials, textile fabrics, paper, and similar materials with ——. (P) Runge-Werke A.-G. B290
 Influence of acetone-soluble constituents of —— on physical and chemical properties of accelerated rubber stocks. Sebrell and Vogt B798
 Influence of glue on reinforcing effect of light magnesium carbonate in ——. Greider B266
 Influence of seasonal variations on latex and ——. De Vries and Spoon B104
 latex; Application of —— to paper sizing. Beckering-Vinckers B506
 latex; Coagulation of Hevea ——. Belgrave B265
 latex; Coagulation of —— by organic bases. Pelizzola .. B304
 latex; Coagulation phenomena in Hevea ——. De Vries .. B798
 latex; Compositions containing —— for sealing the seams of containers. (P) Dewey and others B304*
 latex; Constituents of Hevea ——. Belgrave and Bishop B265
 latex; Flocculating and coagulating powers of coagulating agents for ——. Heim and Audubert B917
 latex; Halogenating —— and compositions and articles made therefrom. (P) Hopkinson B527
 latex or the like; Halogenating dry ——. (P) Hopkinson, and Naugatuck Chemical Co. B918*
 latex and the like; Mixing compounding ingredients with ——. (P) Hopkinson B480
 latex; Manufacture of asbestos or asbestos products impregnated with ——. (P) Russell and Broomfield B880
 -latex paper; Ageing of ——. Shaw and Carson B506
 -latex paper; Durability of ——. Kaye B938
 latex; Paper sizing with ——. Fenchel B742, B976
 -latex paper; Vulcanisation of ——. (P) Kaye B593*
 -latex particles. Hauser B682
 latex; Permanence of paper sized with ——. Beckering-Vinckers B553
 latex; Preservation of —— by ammonia B879
 latex; Rate of separations of emulsions such as ——. Sakurei B763, B1026
 latex; Rôle of enzymes in coagulation of Hevea ——. De Vries B797
 latex or similar materials; Concentrating ——:
  (P) Gibbons and others B757
  (P) McGavack, and General Rubber Co. B840
 and latex of transplanted trees. De Vries B604
 latex; Viscosity of —— without and with ammonia. De Vries B104
 latex; Vulcanisation of ——. Davey B64
 latex; Waterproofing materials by means of ——. (P) Russell and Broomfield B343
 and leather articles; Adhesive for ——. (P) Bühling and Druemann B527
 and the like; Mills for washing ——. (P) Young B105*
 or like plastic materials; Apparatus for crushing, grinding, masticating or mixing —— or for washing scrap rubber or the like. (P) Robinson and Co., and others B918*
 or like substances; Accelerating vulcanisation of ——. (P) Russell, and Norwalk Tire and Rubber Co. B799
 and the like; Vulcanisation of ——. (P) Cadwell, and Naugatuck Chemical Co. B104*
 LS ——, a new crude rubber. Hopkinson B104
 Manufacture of ——:
  (P) Schidrowitz B142
  (P) Schidrowitz and Stutchbury B880
  (P) Williams B142
 Manufacture of artificial silk from ——. (P) Marriott B12
 Manufacture of compounded ——. (P) New Jersey Zinc Co. B606
 Manufacture of hard ——. (P) Geer, and Goodrich Co. .. B954
 Masticating ——. (P) Dunlop Rubber Co., and others B567*
 material for chewing; Production of disinfectant ——. (P) Thieme B918
 materials; Manufacture of spongy or cellular ——. (P) Lefebure B757
 Methods of road and pavement construction and road block manufacture in which the surface is formed of ——. (P) Case, and Novocretes, Ltd. B841*
 p-Nitrophenol as mould preventive for ——. Pinching .. B953
 Obtaining —— from latex. (P) Oltmans B527
 Occurrence of —— in Mid-German lignite deposits. Kindscher B757
 paper; Manufacture of ——. (P) Pelikan B1009
 Plantation —— vulcanised with organic accelerators. Stevens B720
 Plasticity of —— and its measurement. Williams B480
 Pre-determination of properties of vulcanised ——. Le Blanc and Kröger B141
 prepared by the Kerbosch process. De Vries B605
 Printing on —— and production of articles thereby. (P) Plantation Rubber Manuf. Co., and Dessau B527
 Production of aqueous dispersions of ——. (P) Pratt B757
 Production of chlorinated ——. (P) Edison B641
 Production of decorative or other effects in vulcanised ——. (P) Luff, and North British Rubber Co. B840
 products; Soft ——. (P) Benjamin B683
 Rate of absorption of water by ——. Andrews and Johnston .. B392
 Reclaiming ——. (P) Russell, and Rubber Regenerating Co. B1020

PAGE

Rubber *continued.*
- Relation between elastic after-effect and temperature with raw and vulcanised ——. Hock .. B798
- Resistance of pigmented crêpe —— to atmospheric influences, particularly sunlight. Stevens .. B224
- Significance of "slope" of ——. Lunn .. B480
- and similar materials; Compounding of ——. (P) Cadwell and others .. B605
- and similar materials; Manufacture of vulcanised ——. (P) Morgan and Wright .. B142*
- Solubility of sulphur in ——. Kelly and Ayers .. B266
- sponge or the like; Manufacture of articles of ——. (P) Pfleumer .. B104*
- sponge; Manufacture of hot-vulcanised ——. (P) Pfleumer .. B24
- Sprayed ——. Stevens .. B24, B225, B480
- stocks; Influence of accelerators on plasticity of uncured ——. Krall .. B917
- substance; Manufacture of gas expanded vulcanised ——. (P) Marshall .. B757*
- substitutes; Manufacture of ——. (P) Plauson .. B142*
- Tensile strength of ——. De Vries .. 17T, B266
- Test for crude ——. Viscosity in acidified benzene. De Vries B605
- Testing rate of cure of raw ——. Sanderson .. B917
- Tobacco extract as mould preventive for ——. Stevens .. B810
- Treating fibres or fibrous materials with ——. (P) Spijker .. B954
- Treatment of ——:
  - (P) Spear, and Goodyear Tire and Rubber Co. .. B987
  - (P) Zertuche .. B566
- Treatment of articles or material with gases, *e.g.*, in vulcanising ——. (P) Peachey Process Co., and others .. B757
- Variability of raw —— as regards plasticity. Marzetti .. B840
- Vulcanisation of ——:
  - (P) Dunlop Rubber Co., and Twiss .. B605
  - (P) Feibelmann .. B25
  - (P) Morton .. B799
  - (P) Naugatuck Chemical Co. .. B435*
  - (P) Pirelli & Co. .. B187, B187
  - (P) Ricard, Allenet, et Cie. .. B683
  - (P) Russell .. B799*
  - (P) Winkelmann and others .. B142
- vulcanisation; Accelerator for ——, process of manufacturing it, and vulcanising process. (P) Shepard and others .. B480
- vulcanisation accelerators; Analysis of organic ——. Callan and Strafford .. B186
- vulcanisation accelerators; Manufacture of ——. (P) Peachey B225*
- Vulcanisation of —— with condensation products of ammonia and aldehydes as accelerators. (P) Cadwell, and Naugatuck Chemical Co. .. B64, B757*
- Vulcanisation and depolymerisation of ——. Kirchhof .. B186
- Vulcanisation of natural and synthetic ——. (P) Calmon A.-G., and Rimpel .. B641
- vulcanisation; Reaction of accelerators during ——. Organic acids and inorganic accelerators. Bedford and Winkelmann B186
- Vulcanisation of —— in sol and gel form. Boiry .. B953
- Vulcanisation of ——. *See also under* Vulcanisation.
- waste; Utilisation of vulcanised ——. (P) Wild .. B954
- *See also* Caoutchouc.

Rubberised fabric; Manufacture of ——. (P) Meade .. B187
- fibre compositions; Manufacture of ——:
  - (P) Beebe, and Goodyear Tire and Rubber Co. .. B435
  - (P) Yackee, and Goodyear Tire and Rubber Co. .. B343
- paper and other fibrous compositions; Manufacture of ——. (P) Schidrowitz .. B291
- parchment paper; Manufacture of ——. (P) Marshall and McClellan .. B1009

Rubberising filamentary material. (P) Hopkinson and others .. B879

Rubidium; Reaction of magnesium and calcium with ——. Mormann .. B37

Rue; Oil of ——. *See under* Oils, Essential.

Rust; Mixtures for removing —— from iron and steel. (P) Siegel and Podder .. B679
- preventives. (P) Dubois and Kaufmann .. B286
- proofing by coating with cadmium. (P) Wissler and others .. B794*
- -proofing process. (P) Abraham .. B562
- Removing —— from iron and steel. (P) Von Karlowski .. B752
- -resisting paint; Manufacture of ——. (P) Welthoner, and Chem. Lab. für Anstrichstoffe .. B392

Rusting of iron; Mechanism of ——. Evans .. B336
- Treatment of metals to prevent ——. (P) Green, and Parker Rust-Proof Co. .. B475

Ruthenium; Reactions for detection of ——. Weiler and Metz .. B998

Rutin; Biochemical hydrolysis of —— and formation of a new glucoside, rutinose. Charaux .. B443
- Isolation of —— from flowers of elder (*Sambucus canadensis*, L.). Sando and Lloyd .. B288
- Presence of —— in plants, and identification of the glucoside and its products of hydrolysis. Charaux .. B924

Rutinose; Biochemical hydrolysis of rutin and formation of a new glucoside ——. Charaux .. B443

Rye ears; Nitrogenous substances in ripening ——. Kiesel .. B611
- flour. *See under* Flour.

S

Saccharides; Process of treating ——. (P) Fowler, and National Candy Co. .. B686

Saccharification of cellulose and of material containing it; Recovery of sulphuric acid used in ——. (P) Benesch .. B396

Saccharimeter; Re-testing the 100° point of the ——. Polarisation of the normal solution. Kraisy and Traegel .. B608

Saccharin; Detection of —— in vinegar or foodstuffs containing vinegar. Reif .. B111
- Preparation of ——. (P) Altwegg and others .. B927*
- Sweetening foodstuffs with ——. Neumann .. B671

Saccharine juices; Electro-osmotic purification of ——. (P) Elektro-Osmose A.-G. .. B921
- materials; Decolorising and purification of ——. (P) Hood and others .. B958*
- powder; Manufacture of an amorphous —— containing impalpable solids. (P) Washington .. B1024

Safranines. *See under* Azine dyestuffs.

Salicylaldehyde; Electrolytic preparation of —— from salicylic acid. Tesh and Lowy .. B535

Salicylic acid; Heat of combustion of —— and its use as a secondary standard substance in calorimetry. Verkade and Coops, jun. .. B1028
- Molecular compound of caffeine and ——. Regenbogen and Schoorl .. B197
- and its salts; Antiseptic action of ——. Waterman and Kuiper .. B534

Salicylosalicylates; Preparation of —— for use as analgesics. (P) Merck & Co. .. B448

Saline sludges; Grain size of ——. Kayser .. B906

Salipyrine; Constitution of ——. Bodforss and Guthe .. B534

Salmon; Chemical study of canned ——. Variations in composition of Pacific Coast salmons and steelhead trout as influenced by species and locality where caught. Shostrom and others .. B439

Salt; Apparatus for evaporating salt solutions for production of ——. (P) A.-G. Kummler u. Matter .. B95
- Apparatus for production of —— from sea water by means of the radiant heat of the sun. (P) Siemens-Schuckertwerke Ges. .. B422
- bath for heat treatment of metals; Fused eutectic ——. (P) Bellis, and Bellis Heat Treating Co. .. B562
- deposits; Polytherms of the four-salt points of potassium chloride field in the quinternary system of oceanic ——. Serowy .. B630
- Manufacture of ——. (P) Weil .. B217
- Manufacture of pure, light table —— from rock salt. (P) Pappée .. B943
- Manufacture of table —— from rock salt. (P) Heldburg A.-G. B17
- Process for making pure table —— in conjunction with electrolysis of salt solutions. (P) Angel .. B980
- Recovery of ——. (P) Schilling .. B908
- rock-; Process for working up ——. (P) Illig .. B512

Salt-cake. *See* Sodium sulphate.

Saltpetre; Chile ——. *See* Sodium nitrate.
- Refining of crude ——. Rao and others .. B333

Salts; Analysis of mixed —— by the freezing-point method. Batsford .. B131
- Discontinuity in dehydration of hydrated ——. Crowther and Coutts .. B828
- Recovering various —— from saline liquors. (P) Burnham .. B467
- Separation of alkali —— by aqueous ammonia. (P) Dolbear, and Industrial Research Co. .. B1012
- Separation of soluble ——. (P) Dolbear, and Industrial Research Co. .. B632, B633
- Studies of sparingly soluble ——, readily obtained from hot solutions of reacting substances. Chatterjee and Dhar .. B964
- of water-soluble acids; Production of —— from peat-forming plants. (P) Brat .. B537

Salvarsan; Biological standardisation of ——. Roth .. B767
- Separation of —— from acid solutions with exclusion of air. (P) Dohr, and Kober Chemical Co. .. B1030
- solutions; Acid-base equilibria of ——. Elvove and Clark .. B767
- solutions; Osmotic pressure of ——. Johnston .. B767
- solutions; Viscosity and toxicity of ——. Voegtlin and others B691

Salvia plebeia, R.Br.; Fatty oil from seeds of ——. Rau and Simonsen .. B478

Sambhur fat. Rae .. B264

Sambucus canadensis; Isolation of rutin from flowers of ——. Sando and Lloyd .. B288

Sand-lime brick; Specification for quicklime and hydrated lime for manufacture of ——. U.S. Bureau of Standards .. B383
- -paper. *See under* Paper.
- Testing —— for use in Portland cement mixtures. Morrison B871

Santonin; Determination of —— in tansy. Schaap .. B349

Sapogenin of the white soapwort. Karrer and others .. B887

Saponin of chestnut seeds; Saccharides and acids produced by hydrolysis of ——. Van der Haar .. B31
- drugs; Valuation of ——. Brandt .. B361
- from *Gypsophila paniculata* (large white soapwort). Kofler and Dafert .. B73
- of *Panax repens*, Maxim. Murayama and Itagaki .. B276

Saponins of *Polygala amara*. Glaser and Kraules .. B924
- and related compounds. Urson. Van der Haar .. B534
- and related substances. Van der Haar .. B996
- Sapogenin of the white soapwort. Karrer and others .. B887
- of sarsaparilla root. Kaufmann and Fuchs .. B151
- Valuation of —— as foam-producing materials. Kofler .. B443

Sarawak; Crude oil of ——. Kewley .. B363

Sardine blubber; Quantitative analysis of —— and its value as a paint vehicle. Eibner and Semmelbauer .. B986

Sarsaparilla root; Saponins of ——. Kaufmann and Fuchs .. B151

Satin white; Manufacture of —— for coating paper. (P) Ryan .. B13

Sauerkraut; Value of Bezssonoff's reaction for indicating the presence of vitamin C in the juice of ——. Wedgwood and Ford .. B571

PAGE

Sausage meat; Value of Feder's ratio number for detection of —— with water. Juckenack B570
Sausages; Moisture content of ——. Behre B488
Sawdust; Alteration of —— during storage. Bergström B373
  Gas producers for ——. (P) Dormand B859
Saxifraga crassifolia. *See* Badan.
Scale and like deposits in boilers and the like; Electrical prevention of ——. (P) Heberlein B1001*
Schizosaccharomyces liquefaciens, n. sp., a yeast resistant to free sulphurous acid. Osterwalder B648
Science, religion, and workshop. Second Messel memorial lecture. Leverhulme 242T
Scouring, bleaching, dyeing and like operations; Agents for ——. (P) Moseley B629
  composition and method. (P) Phair, and Kohnstamm and Co. B416
Screening and grading apparatus. (P) Raahauge B973*
Scrubbers for gas producer plants. (P) Ruston and Hornsby, Ltd., and others B46
Scrubbing columns. (P) Mackenzie and others B360
  towers; Design and operation of gas ——. Drane 329T, B971
Seal oil. *See under* Oils, Fatty.
Sealing chambers used in treatment of material in sheet form by air or gas. (P) Young and others B973*
Seaweed; Carbonisation of —— preliminary to extraction of iodine and potassium salts. King B700
  Glue from ——. Blasweiler B881
  Manufacture of an adhesive from ——. (P) Thornley and others B347, B883*
  Treatment of ——. (P) Freundler B56
Sebacic acid. Boedtker B478
Seedlings; Changes in hydrogen ion concentration produced by growing —— in acid solutions. Davidson and Wherry .. B484
Seeds; Action of nitrogen-free end-products of plant metabolism (essential oils, terpenes, etc.) on germination of ——. Sigmund B723
  Disinfecting ——:
    (P) Bayer und Co. B843
    (P) Engelmann, and Du Pont de Nemours and Co. B485
    (P) Fahlberg, List und Co. B842
    (P) Pichler and Wöber B962
  Liquid for treating ——. (P) Eggers and Burlin B106
  New materials for "pickling" ——. Plaut B723
  Significance of oxygen for formation of enzymes in germinating plant ——. Oparin and Bach B920
  Solutions for treating ——. (P) Meyer B530
Selenium; Critical studies on methods of determining ——. Coughon and Bray B496
  Determination of ——. Strecker and Schartow B694
  Distillation method of separating tellurium from ——. Lenher and Smith B853
  in glass; Determination of ——. Cousen B217
  Gravimetric separation of tellurium from ——. Moser and Miksch B852
Selenium compounds; Preparation of organic —— from primary, aromatic amines. (P) Meister, Lucius, und Brüning .. B617
Selenium oxychloride; Use of —— for dissolving substances, separation of saturated and unsaturated hydrocarbons, and removing coatings from bodies. (P) Lenher B47
Selenium trioxide; Preparation and properties of ——. Worsley and Baker B93
Senegenic acid. *See* Senegenin.
Senegenin, the ultimate sapogenin from *Radix Senegae*. Wedekind and Krecke B766
Separating and classifying solid materials; Apparatus for ——. (P) Pinoche and Radelet B544*
  chemicals and minerals by oil flotation and removal of oil from chemicals. Traube and others B895
  components of mixtures of liquids and solids; Means for ——. (P) Arbuckle B283*
  excess liquid from subdivided solid material. (P) Futers, and Semet-Solvay and Piette Coke Oven Co. B602
  floating and other impurities in suspension from liquids; Apparatus for ——. (P) Petree B83*
  granular material such as coal, ores, or the like. (P) Lequeux B896*
  intermixed divided materials of different specific gravities. (P) Peale and others B999
  liquids of different density:
    (P) Bateman B736
    (P) Knight and Smith B323*
  liquids, *e.g.*, oil from water. (P) Pink B699*
  liquids and solids of different densities; Mechanical ——. (P) Linden B698
  materials of different specific gravities. (P) Bongardt .. B119*
  mixed liquids of different volatility. (P) Rlalland B205
  mixed materials; Pneumatic process for ——. (P) Arpin .. B361*
  one or more substances from other substances. (P) Aktiebolaget Separator B117
  particles; Electrostatic method of ——. (P) South Metropolitan Gas Co., and others B785
  substances from one another. (P) Hatfield, and Imperial Trust for Encouragement of Scientific and Industrial Research .. B698*
  washing, and classifying solid materials. (P) Maison Beer, and Charlier B281
Separators; Centrifugal ——:
    (P) Aktiebolaget Separator B81, B282
    (P) Bachmann B282
    (P) Baker, Sons and Perkins, Ltd., and others B895

PAGE

Separators—*continued*.
    (P) Barnes and Morgan B119*
    (P) Hapgood, and De Laval Separator Co. B282
    (P) Hellmers, and West End Chemical Co. B999
    (P) Karpinsky and Andersen B885
    (P) Lilleshall Co., and Bishop B657, B972
    (P) McEntire B239
    (P) Mauss B40, B361*
    (P) Schneier B697
    (P) Ter Meer B972
  centrifugal; Apparatus for cleaning the drums of ——. (P) Svensson and Norling B158
  Centrifugal —— for dehydrating or otherwise purifying oils. (P) De Laval Chadburn Co., and Johnstone B1005
  Centrifugal —— for liquids. (P) Aktiebolaget Separator .. B736
  Centrifugal —— for oil and water. (P) Aktiebolaget Separator .. B9
  Centrifugal —— for ore suspensions. (P) Eccleston, and Centrifugal National Concentrator Co. B60
  centrifugal; Preventing contamination of separated liquids by one another in ——. (P) Forsberg, and De Laval Separator Co. B323*
  Centrifugal —— for recovering precious metals. (P) West and others B718
  centrifugal; Self-discharging ——. (P) Grange Iron Co., and Hoyte B40
  Centrifugal ——, *e.g.*, for separating coke from clinker. (P) Arpin B158
  Centrifugal —— for separating refrigerated ingredients. (P) Hapgood, and De Laval Separator Co. B47
  Centrifugal —— for separating solids from liquids; Apparatus for ——. (P) Avrutik B406
  Centrifugal —— for use in sugar refining. (P) Roberts B992
  Electro-centrifugal ——. (P) Marx B117
  for mixtures of fluids of different densities. (P) Lenz and Jupp .. B42*
Sera; Stable preparations from —— suitable for internal use. (P) Wintsch B812
Sericite; Dehydration temperature of ——. Stuckey B982
Serum albumins of various animals; Method of determining isoelectric point of proteins, and its application to ——. Michaelis and Nakashima B195
Sesamé oil. *See under* Oils, Fatty.
Settling apparatus; Scraping mechanism for non-circular ——. (P) Piper, and Dorr Co. B774*
  tanks. (P) Elliott and Jacobsen B160
Sewage; Aerating and activating ——. (P) Ruth, jun. B534
  analysis; Alterations in methods of ——. Lührig B652
  effluents; Royal Commission test for ——. Johnson B613
  Electrochemical treatment of ——. (P) Landreth B1027
  filters; Chemical changes occurring in sprinkling ——. Campbell and Rudolfs B690
  and the like; Apparatus for treating ——. (P) Overton .. B534
  and like liquids; Bacteria bed for treatment of ——. (P) Girard B573*
  and like liquids; Treatment of ——. (P) O'Shaughnessy .. B766
  Manufacture of fertilisers and colouring matters from ——. (P) Bechelli B614
  purification. (P) Perry B804
  Purification of —— by aeration in the presence of activated sludge. Baslakina B310
  purification; Chemical factors in denitrification in ——. Fowler and Kotwal B728
  purification tests; Direct oxidation ——. Dallyn and others .. B613
  Rendering odourless the foul gases from chambers for treating ——. (P) Bach B442
  sludge; Dehydration of —— utilising the gases produced from the sludge. (P) Imhoff and others B31
  sludge; Dewatering activated ——. Pearse B765
  sludge; Filtration of activated ——. Mohlman B398
  sludge; Formation of methane from ——. Bach and Sierp .. B275
  sludge; Hygienic aspects of use of —— as fertiliser. Wolman .. B275
  sludge and the like; Extracting liquid from —— by suction. (P) Huebner and Ardern B939
  sludge and other like materials; Apparatus for drying and destroying —— by their own combustion. (P) Linden B845
  sludge; Treatment of ——:
    (P) Maclachlan, and Maclachlan Reduction Process Co. B231, B963*
    (P) Moerk and Landreth B804
Shale; Apparatus for distillation of ——:
    (P) Catlin, and Catlin Shale Products Co. B779
    (P) Groves and Lain B502
    (P) Lamplough B1003
  Apparatus for extracting oil from ——. (P) Wallace and others B165
  Apparatus for extracting volatile matter from oil ——. (P) American Shale Reduction Co. B245*
  Apparatus for separating oil from ——. (P) Smith B502
  clinker; Manufacture of artificial stone from oil ——. (P) Jura Oelschiefer-Werke A.-G. B336
  clinker; Manufacture of a binding agent resembling cement from oil ——. (P) Jura Oelschiefer-Werke A.-G. B336
  and coal; Electrostatic separation of mixtures of ——. (P) South Metropolitan Gas Co., and others B735
  Coal from an oil ——. Galsser B817
  Concentration of oil ——. (P) Dolbear and Oliver B1004
  Destructive distillation of oil from ——. (P) Stalli B459
  Destructive distillation of —— and recovery of products therefrom. (P) Box B46
  Device for deflecting, opening, and crushing —— during distillation or semi-distillation. (P) Wollaston B209
  Distillation of ——. (P) S. E. Co. B280*
  Extracting oil from ——:
    (P) Coogan B411
    (P) Holzverkohlungs-Ind. A.-G. B410
    (P) Jenkins B779

Shale—*continued.*
Isolation of bituminous substances from oil ——. (P) Holzverkohlungs-Ind. A.-G. .. B589
Isolation of high-grade oil and tar from ——. (P) Engler .. B48
and the like; Apparatus for distilling ——. (P) Davis and others B503
Low- or medium-temperature distillation of oil ——. (P) Starkey .. B365
Manufacture of hydraulic cement from oil ——:
(P) Jura Oelschieferwerke A.-G. .. B297
(P) Plauson's Forschungsinst. .. B297
Manufacture of useful products from oil ——. (P) Hinselmann .. B548
Obtaining oils from ——. (P) Edwards and Young .. B84
oils; Apparatus for fractional distillation of ——. (P) Fairweather .. B410
oils or tars; Desulphurisation of ——. (P) Escherich and others B589
Production of aluminium chloride and other products from carbonaceous ——. (P) Wolcott, and Texas Co. .. B830*
Recovery of ammonia from ——. (P) Cooper .. B665
Refining oil ——. Bailey .. B776
retorts:
(P) Bennett .. B821
(P) Dunten .. B327
(P) Francis .. B779
(P) Garland .. B8
(P) Guy-Bell .. B1004
(P) Jenson .. B550
slag; Manufacture of artificial stone and hydraulic cement from ——. (P) Schmidt and Dahnle .. B911
Treatment of oil ——:
(P) Backstaff .. B410
(P) Jenson .. B502
Utilisation of low-grade coal and ——. (P) Hampton .. B662
Utilisation of oil ——. (P) Beyschlag and Ganssen .. B365

Shark liver oils. *See under* Oils, Fatty.
meal; Urea in ——. Dill .. B885

Sheep dips; Dry arsenical compositions for preparation of ——. (P) Pratt .. B804
dips and the like. (P) Bagnall-Bull .. B573

Sheet material; Sealing chambers used in treatment of —— by air or gas. (P) Young and others .. B973*

Shellac; Resinic nature of ——, and attempts to effect a partial synthesis. Harries and Nagel .. B796

Sherardising metals in wire or strip form. (P) Petrie, and Petrie and McNaught, Ltd. .. B340*

Sherries and their substitutes; Manufacture, composition, and valuation of ——. Kickton and Koru .. B725

Siccatives; Manufacture of ——. (P) Pohl, and Jäger Ges. .. B392

Sieves; Effect of wear on small-mesh wire ——. Keen and Haines .. B39

Sifting granular or pulverulent materials. (P) Harrison and Harrison B83*

Silage; Comparative values of green fodder, hay, and ——. Crasemann .. B688
Maize ——. Woodman and Amos .. B885
Production of —— from a mixture of Sudan grass and a legume. Wright and Shaw .. B962

Silica; Action of —— on calcium sulphate. Marchal .. B92
-alumina; The system ——. Bowen and Greig .. B512
Behaviour of —— in the flotation process. Berl and Pfannmüller .. B678
brick manufacture; Comparative test of quicklime for ——. Trostel .. B674
bricks; Effect of repeated burning on structure and properties of lime-bonded ——. Hugill and Rees .. B674
bricks; Grading of ——. Robinson and Rees .. B513
bricks; Specification for quicklime and hydrated lime for manufacture of ——. U.S. Bureau of Standards .. B383
bricks; Testing ——. Steinhoff .. B981
Colloidal ——. Diénert and Wandenbulcke .. B254
gel; Absorption of benzene by ——. (P) Somerville and Williams B860
gel and activated carbon for recovering benzol from gas. Urbain B739
gel; Drying and coating —— for use as an adsorbent or catalyst. (P) Fitzpatrick .. B972
gel; Esterification in presence of ——. Milligan and others .. B847
gel as an industrial adsorbent. Williams .. 97T, B931
Manufacture and application of ——. (P) Somerville and Williams .. B787
gels; Ageing phenomena in ——. Schwarz and Stöwener .. B595
and lime; Influence of certain fluxes on softening temperature and fluidity of a monosilicate mixture of ——. Patterson and Summers .. B261
Production of masses or bricks of ——. (P) Pohl .. B944
refractories for gas retorts. Emery .. B674
refractories; Storage of ——. Rees .. B674
-sodium metasilicate; The binary system ——. Morey and Bowen .. B1011

Silicate melts; Formation of eutectic and similar structures in ——. Hallimond .. B981
rocks; Determination of total sulphur in ——. Shaw and MacIntire .. B66

Silicates of basic dyestuffs; Manufacture of ——:
(P) Eberlein .. B526
(P) Kochelwerk Ges. für Chem. Erzeugnisse, and Eberlein .. B1008
of copper, nickel, etc.; Process of decomposing, dissolving, or rendering soluble ——. (P) Rankin and Sloss .. B16
Electrical conductivity of fused ——. Farup and others .. B745
Manufacture of exchange ——. (P) Wherry .. B886
Obtaining metal compounds from ——. (P) Brown .. B511
Preparation of solutions of alkali —— suitable for intravenous injection. (P) Kühn .. B616

Silicates—*continued.*
Production of solutions of alkali ——. (P) Codd .. B56
Separating constituents of mineral ——:
(P) La Rue and Scofield .. B420
(P) Scofield and La Rue .. B558
Treatment of —— to produce glass-making materials. (P) Frink .. B749*

Silicic acid granulate; Preparation of a colloidal soluble ——. (P) Chem.-pharm. Werke Bad Homburg .. B617
in Portland cement. Hart .. B296, B516
Preparation of ——. (P) Govers .. B870
Retention of organic dyestuffs by ——. Berl and Pfannmüller .. B901
sol and a method for its preparation. Schwarz .. B292

Silicic acids. Schwarz and Menner .. B908

Siliceous earths; Decomposing —— by heating with gaseous acids. (P) Blakkolb and Maag .. B943
material; Preparation of ——. (P) Govers .. B829
metal-bearing minerals; Treatment of ——. (P) Moxham .. B388

Silico-manganese steel. *See under* Steel.

Silicon in aluminium-silicon alloys; Determination of ——. Gat B872
Determination of —— in ferrosilicon. Dubovitz .. B135
Determination of —— in high-speed tool steels. Vernay .. B635
-iron alloys; Specific gravity of —— in relation to composition. Hengstenberg .. B750
in iron-silicon alloys; Determination of —— by their physical properties. Yensen .. B946
Micro-determination of —— and its concentration in certain organs. Bertrand .. B894
Micro-method for determination of —— in tissues. Isaacs .. B454
mirror; Production of a ——. (P) Siemens u. Halske A.-G. B788
obtained from cooled molten aluminium; Action of nitrogen on ——. Funk .. B596
Production of aluminium and —— and other elements from clay, bauxite, etc. (P) Hooper .. B717
-steel. *See under* Steel.

Silicon carbide crystals; Purifying ——. (P) Brockbank, and Abrasive Co. .. B515

Silicon halides; Use of iron alloys for production of ——. De Carli .. B466

Silk, artificial; Adsorption of dyestuffs by ——. Paneth and Radu .. B741
artificial; Apparatus for filtering solutions used in manufacture of ——. (P) Dreaper .. B52
artificial; Apparatus for sizing and drying ——. (P) Dean B905*
artificial; Dyeing cellulose acetate ——. Lawrie .. B331
artificial; Dyeing cellulose acetate —— in deep fast shades in direct dyeing. (P) British Dyestuffs Corp., and others B129
artificial; Dyeing and printing cellulose acetate ——. (P) Green and others .. B291*
artificial; Gutter for treating yarns of ——. (P) Bemberg A.-G. .. B251
artificial; Increasing the strength and, especially, the water-resisting properties of ——. (P) Karplus .. B90
artificial; Manufacture of ——:
(P) Bayer und Co. .. B51
(P) Dreyfus .. B251
(P) Hölken, jun. .. B554*, B554*
(P) N.V. Hollandsche Kunstzijde Ind. .. B825
artificial; Manufacture of —— from bark waste of Redwood. Greenbaum .. B904
artificial; Manufacture of cellulose acetate ——. (P) Stevenson .. B129*
artificial; Manufacture of —— from cuprammonium cellulose solutions. (P) Hölken, jun. .. B52
artificial; Manufacture of —— by the cuprammonium process. (P) Zellstoff-Verwertungs-A.-G., and Wagner .. B331
artificial; Manufacture of fabrics containing cellulose acetate ——. (P) Marshall .. B290, B939*
artificial; Manufacture of —— from rubber. (P) Marriott B12
artificial; Manufacture of —— and of similar products. (P) Bassett and Banigan .. B706
artificial; Manufacture of threads of ——:
(P) Converse, and Atlas Powder Co. .. B415
(P) Hölken, jun. .. B374
artificial; Manufacture of threads of —— of any desired thickness from viscose. (P) Bronnert .. B905*
artificial; Manufacture of viscose ——:
(P) Bronnert .. B374*
(P) Dreaper .. B592
(P) Morlondi .. B593
(P) Schadee, and N. V. Hollandsche Kunstzijde Ind. B51
artificial; Production of fine threads of —— from cuprammonium solutions. (P) Zellstoff-Verwertungs-A.-G., and Wagner .. B707
artificial; Production of patterns on fabrics containing —— by mercerisation. (P) Calico Printers' Assoc., Ltd., and Roberts .. B593
artificial; Rapid and economical washing and drying of bobbins of ——. (P) Pinel .. B330
artificial; Recovery of ammonia and other valuable chemicals from waste denitration liquors in manufacture of ——. (P) Bindschedler, and Tubize Artificial Silk Co. of America .. B507
artificial; Removing size from cellulose acetate ——. (P) Soc. Chim. Usines du Rhône .. B250
artificial; Spinning of ——. (P) Loewe .. B742
artificial; Treatment of ——. (P) Snyder .. B90
artificial; Treatment of viscose ——. (P) N. V. Nederlandsche Kunstzijdefabr. .. B1009
cocoons; Destruction of life within —— by means of chloropicrin. Bertrand .. B741
Composition of spinning ——. Abderhalden .. B127

PAGE

Silk—continued.
Dyeing —— black. (P) Seyer, and Standard Silk Dyeing Co. .. B978
Dyeing raw ——. (P) Maupai.. .. .. B609
fibroin. Brill B50
fibroin; Anhydride structure of ——. Abderhalden and Schwab B903
fibroin; Determination of molecular weight of ——. Herzog and Kobel B628
fibroin; Enzymic decomposition of ——. Wessely.. .. B692
Increasing the weight of —— which has been previously weighted by the tin phosphate-silicate process. (P) Textilausrüstungs-Ges. B291
materials; Electroscopic method and apparatus for testing the genuineness of ——. (P) Bernini B91*
Methods of treating ——. (P) Mendelsohn, and Carpenter Chemical Co. B373
piece goods; Dyeing ——. (P) Seyer, and Standard Silk Dyeing Co. B629
piece goods; Production of washable dyed ——. (P) Seyer, and Standard Silk Dyeing Co. B1010
Process of treating ——;
(P) Cole, jun. B743*
(P) Maupai B699
Recovery of —— from silk crop waste. (P) Strona Cugnolio Piaua B51
Removing size from cellulose acetate artificial silk and from mixed fabrics of cellulose acetate and raw natural —— and ungumming such fabrics. (P) Soc. Chim Usines du Rhône B250
Treatment of ——. (P) Genstein, and Kem Products Co. B653
Weighting ——:
(P) Elöd B708
(P) Ges. für Verwertung Chem. Produkte B91
Weighting of mineral-weighted —— with logwood or hæmatoxylin. (P) Müller-Meis B594
weighting; Rôle of sodium phosphate in stannic acid-phosphate process of ——. Fichter and Heusler B554
sillimanite development in some typical slags. Kraner B981
Preparation of artificial —— for refractory uses. Sims and others B981
silos; Drainage from tower ——. Godden B71
silver alloys; Slags produced in melting ——. Phelps B472
colloidal; Preparation of ——. Reblère B848
colloidal; Staining wood by means of ——. Von Weimarn B629
Electrolytic deposition of ——. (P) Barth B753
Examination of course of recrystallisation of —— by means of X-rays. Glocker and Kaupp B1016
ions; Titration of —— with dyestuff indicators:
Böttger and Schmitt B851
Fajans and Hassel B79
Fajans and Wolff B851
-lead anodes for electrolysis of brine. Fink and Pan .. B906
Micro-electrolytic determination of zinc and ——. Neumann-Spallart B969
ores; Preparation of —— for leaching. (P) Heunes .. B20
Partition of —— between two different liquid metallic phases. Tammann and Schafmeister B873
in photographic materials; Cyanide method for determination of ——. Eggert B235
in photographic preparations; Titration method for determination of ——. Marasco B928
Precipitation of —— from cyanide solution. (P) Hirschkind, and International Precipitation Co. B181
Precipitation process for ——. Steigmann B98
Preparation of sulphur-containing ores for extraction of gold and —— (P) Soc. Metalurgica Chilena "Cuprum" .. B429
preparations; Concentration of silver ions in solutions of colloidal and complex ——, with special reference to their medicinal use. Schiee B925
Rapid electro-analytical separation of copper, bismuth, and —— by means of graded potentials. Lassieur B540
Solubility of silver chloride, and titration of —— by Gay Lussac's method. Lorenz and Bergheimer B803
solutions; Use of ammoniacal —— in qualitative micro-analysis. Denigès B968
Treating sulphide ores of lead, copper, and ——. (P) Christensen B388
ilver borondisalicylate; Preparation of ——. (P) Schulz and Joerrens B769
ilver bromide; Photochemical reduction of —— in presence of gelatin. Reychler B356
Susceptibility to reduction of ——. Reychler B279
ilver chloride; Photochemical decomposition of ——. Schwarz and Gross B618
Solubility of —— and titration of silver by Gay Lussac's method. Lorenz and Bergheimer B893
ilver halides; Dispersity of —— in relation to their photographic behaviour. Germann and Hylam B850
ilver iodide; Photographic sensitiveness of ——. Germann and Hylam B36
Preparation of compounds of proteins and ——. (P) Parke, Davis and Co. B76
ilver nitride. Olmer and Dervin B418
ilver-protein preparations; Production of stable, readily soluble ——. (P) Bayer und Co. B598
ilver salts; Action of light on dissolved —— in presence of zinc oxide. Baur and Perret B941
intering. See under Ores.
itostanol. See Dihydrositosterol.
itosterol. Anderson and Nabenhauer B888
Reduction of ——. Anderson and Nabenhauer B846

Size; Casein ——. (P) Regnier and Bird B920
Sizing glue; Preparation of ——. (P) Leonhardt B920
materials; Effect of —— on strength of yarn. Owen .. B50
wood, leather, and the like; Production of material for ——. (P) Eggers and Burlin B104
Skin, calf-; Chemistry of soaking of ——. McLaughlin and Theis B642
calf-; Effect of long contact of —— with saturated lime water. Wilson and Daub B642
Composition of animal ——. McLaughlin and Theis .. B799
Enzymes of the ——. Yamasaki B762
goat-; Chemistry of soaking of ——. McLaughlin and Theis B641
swelling; Biochemistry of skin and chemical basis of ——. Kaye and Lloyd B954
Skins; Adsorption of hydroxyl ions by sun-dried ——. Don and Pringle B988
and the like; Treatment of ——. (P) Le Petit and others B644
Radioactive ——. (P) Tappareili B481
Swelling of ——. Meunier B841
Treatment of ——. (P) Duckworth B267, B482
See also Hides.
Slag, basic; Report on availability of phosphoric acid in ——. Haskins and others B394
blast-furnace; Conversion of acid —— into Portland cement or into basic slag for manufacture of blast-furnace cement. (P) Grün B831
blast-furnace; Development of hydraulic properties in granulated ——. Kühl B296
blast-furnace; Manufacture of cement from ——. (P) Grün B297
blast-furnace; Manufacture of Portland cement from ——. (P) Andrews B384
blast-furnace; Preparation of reactive ——. (P) Grün .. B831
Granulating liquid ——. (P) Opderbeck B301
Granulating —— by means of water in centrifugal mills. (P) Gelsenkirchener Bergwerks A.-G., Abt. Schalke, and Opderbeck B638*
inclusions in relation to fatigue of metals. Haigh B473
Influence of certain fluxes on softening temperature and fluidity of a monosilicate lime ——. Patterson and Summers B261
Machines for granulating ——. (P) Bonnor, and Newell and Co. B718*
melts; Tempering cooling strains in ——. (P) Schlitz .. B423
Phosphor-manganese —— as fertiliser. Ongaro B484
Reducing fused —— to granular form. (P) Maguet .. B749*
-sand as aggregate in concrete and ferro-concrete. Burchartz B599
test for refractories; Quantitative laboratory ——. Norton B910
Slags; Checker-bricks for resisting alkaline ——. Booze and Flint B910
Formation of eutectic and similar structures in silicate ——. Hallimond B981
from lead, copper, and other blast furnaces. Rigg B474
Method of studying attack of molten —— upon refractory materials. Rose B174
Preparation and smelting of ——. (P) Diehl B340
produced in melting silver alloys. Phelps B472
Slide rule for apparent purity calculations in sugar analysis. Bastone B271
Slime-pulp thickener. (P) Allen B42
Slimes; Dressing or concentrating carbonaceous ——. (P) Coppée et Cie. B7
Sludges; Apparatus for continuous cooling and purification of hot ——. (P) Meister, Lucius, und Brüning B4
Smell; Psycho-galvanic measurement of ——. Auld B38
Smelter gases; Decomposing sulphur dioxide in ——. (P) Carson B340
Smelting apparatus. (P) Rodrian, and Rodrian Electro-Metallurgical Co. B875
and electrolysing processes. (P) Rodrian B476*
Smithsonite; Germanium in ——. Müller B636
Smoke; Analysis of ——. Salmang B319
developers; Utilisation of phosphorus-arsenic ——. (P) Chem. Fabr. Griesheim-Elektron B36
Soap; Discoloration in maize oil —— and the possibility of preventing its development. Ardagh and others B223
Fractional salting-out of —— from solution. Goldschmidt B264
Hydration of curd fibres of sodium palmitate ——. Bennett B1010
Manufacture of ——:
(P) Bodman, and Garrigue and Co. B24
(P) Tseng B62*
(P) Weiter B986
(P) Ziegler und Co. B681
Manufacture of curd ——. (P) Morgenstern B986
Manufacture of —— from drying and semi-drying oils. (P) Petroff B665
Manufacture of a formaldehyde potassium ——. (P) Becker B390
Manufacture of —— poor in water. (P) Lagradi B681
Manufacture of powdered ——. (P) Lund and others .. B565*
-nicotine preparations; Deterioration of ——. McDonnell and Nealon B803
powder; Rapid analysis of ——. Flanders and Truitt B62
Preparation for adding to shaving ——. (P) Wolf B640
solutions; Fungicidal action of ——. Schmidt B766
solutions; Surface tension of ——. Lascary B432
-water systems; Electrical resistance of —— at the setting point. Fischer B390
Soaps; Benzine ——. Thomson B248
Decomposition of potassium or sodium —— by ammonium chloride in aqueous solution. Stüpel B565
Determination of total alkali in ——. Stüpel B565

PAGE

Soap—*continued.*
in dry alcohol; Behaviour of solutions of ——. Laing and McBain B755
Drying of ——. Lederer B952
Manufacture of disinfectant ——. (P) Riedel A.-G. .. B987
Manufacture of glycerin and alkali ——. (P) Schmidt .. B102*
Manufacture of sodium or potassium —— from ammonium soaps. (P) Zipser B102
Manufacture of solvent —— from sulphonated oils. (P) Alsche B565
Resin ——. *See under* Resin.
Structure of ——. Kratz B432
Soapwort; Saponin from the large white ——. Kofler and Dafert B73
Soda, caustic: Electric cells for production of ——. (P) Allen, and Electron Chemical Co. B467
caustic; Manufacture of ——. (P) Jones, and Courtaulds, Ltd. B712*
caustic; Recovery of —— from mercerised fabrics. (P) Farrell B53
· Colouring matter of Magadi natural ——. Nishikawa and Miyake B130
crystals; Manufacture of ——. (P) Hilgart B256
Production of —— containing water of crystallisation or mixtures thereof with other substances. (P) Welter .. B422*
Recovery of —— from black liquors. (P) Creighton and Darco Corp. B291
Recovery of —— from solutions used in treating esparto. (P) Wallace B707
Soda-cellulose lyes; Removal of silicic acid from waste ——. Schwalbe B128
Soda-lime granules for gas masks; Coating ——. (P) McNeil, and Secretary of War of United States B351
Sodium in aluminium; Determination of ——. Fairlie and Brook B872
amalgam; Decomposition of liquid —— in aqueous solutions. Klein B867
Detection of potassium and —— by a wet method. Longinescu and Chaborski B317
Electrolytic preparation of —— from fused sodium chloride. (P) Danneel B636
flame; Device for producing a ——. Dolid B202
Iodometric determination of ——:
Bálint and Petow B317
Müller B771
Manufacture of ——. (P) Ewan B752
Manufacture of metallic —— from borax. (P) Peacock and Waldo B562
and potassium and their fused chlorides; Equilibrium between ——, and production of alloys of alkaline-earth metals and lead. Jellinek and Tomoff B873
Qualitative test for ——. Kolthoff B79
Replacement of —— from solutions of its salts by magnesium and aluminium. Bergstrom B132
Volumetric micro-method for determination of ——. Müller B156
-wire press. Patterson 283T
Sodium alizarate and alumina. Williamson B826
Sodium anthraquinone-1- and -2-sulphonates; Products of destructive distillation of ——. Perkin and Sewell .. B126
Sodium arsenite; Action of —— on photographic plates. Clark B77
Sodium bicarbonate; Alternate precipitation of ammonium chloride and ——. (P) Claude, and L'Air Liquide .. B380*
containing sodium carbonate; Volumetric analysis of ——. Chiarino B377
Conversion of —— into sodium carbonate. (P) Glund, and Ges. für Kohlentechnik B421
Conversion of —— into sodium carbonate in aqueous solution at various temperatures. Sabalitschka and Kubisch .. B669
Detection of sodium carbonate in —— by means of phenolphthalein. Macri B940
Manufacture of ——. (P) Glund and others B909
solutions for intravenous injections; Preparation of ——. Guerbet B75
Sodium-bismuth tartrates. Corfield and Adams B807
Sodium bisulphate: Method of packing ——. (P) Chem. Fabr. von Heyden B17
Sodium bisulphite; Decomposition of —— in aqueous solution. Sabalitschka and Kubisch B670
Manufacture of ——. (P) Drewsen, and West Virginia Pulp and Paper Co. B334
solution; Determination of sulphur dioxide in ——. Debucquet B253
Sodium borates; Manufacture of ——. (P) Knight and others B558
Sodium carbide; Manufacture of ——. (P) Parsons B16
Sodium carbonate compound; Manufacture of a ——:
(P) Cocksedge B16
(P) Cocksedge and others B257
(P) Sundstrom and others B56
Conversion of sodium bicarbonate into ——. (P) Glund, and Ges. für Kohlentechnik B421
Detection of —— in sodium bicarbonate by means of phenolphthalein. Macri B940
Manufacture of ——:
(P) Cocksedge B980
(P) Cocksedge and Solvay Process Co. B788
(P) Glund and others B909
Separation of —— from solutions containing caustic soda. (P) Jones, and Courtaulds, Ltd. B712*
See also Soda.

Sodium hypochlorite. Sanfourche and Gardent B97
Electrolysers for production of ——. (P) Mather and Platt, Ltd., and Barclay B51
solutions; Kinetics of decomposition of ——. Giordani .. B94
Sodium metasilicate-silica; The binary system ——. Morey and Bowen B101
Sodium naphtholate; Detection and determination of ——. Callan and Strafford 2
Sodium nitrate; Alleged beneficial action of the iodine content and radioactivity on the fertilising value of ——. Von Feilitzen and Egner B56
Influence of a deficiency of potash on development of barley when manured with different amounts of ——. Wiessmann B30
Leaching caliche for recovery of ——. (P) Burdick, and Guggenheim Bros. B9
Manufacture of ——. (P) Smith, and Guggenheim Bros. .. B9
solutions; Evaporation rate of ——. Bagster 63
Sodium nitrite; Action of —— in the soil. Robinson B18
Production of ——. (P) Nitrum A.-G. B71
Sodium oxalate: Preparation of —— from sodium formate. (P) Chem. Fabr. Grünau B35
Pyrogenic dissociation of ——. Ott B57
Sodium palmitate; Hydration of curd fibres of ——. Bennett .. B101
Sodium perchlorate; Ternary and quaternary equilibria in the system ammonium sulphate and perchlorate, sodium sulphate, water, and ——. Freeth B377
Sodium peroxide; Analysis of ——. Bosshard and Furrer B556
Sodium phenolate: Detection and determination of ——. Callan and Strafford 2T
Sodium phosphate: Manufacture of mono- ——. (P) Glaeser .. B829
Sodium pyrosulphite; Manufacture of ——. (P) Michael und Co. B257
Sodium silicate; Heat of formation of ——. Matignon B214
Manufacture of aluminium chloride and ——. (P) Peacock and Waldo B942
Sodium sulphate-magnesium sulphate-water; The system —— and a method of separating the salts. Archibald and Gale .. B827
Manufacture of ——:
(P) A.-G. der Chem. Prod.-Fabr. Pommerensdorf, and Schüler B788
Kali-Forschungs-Anstalt B256
(P) Skinner B380
Manufacture of hydrochloric acid and ——:
(P) Bayer und Co. B422*
(P) Grasselli, and Grasselli Chemical Co. B632
Reciprocal salt pair ammonium nitrate and ——. Perman and Harrison B292
and sodium fluoride; Manufacture of a double salt of ——. (P) Howard, and Grasselli Chemical Co. B980
solutions; Evaporation rate of ——. Bagster 63T
Ternary and quaternary equilibria in the system, ammonium perchlorate and sulphate, sodium perchlorate, water, and ——. Freeth B377
See also Thenardite.
Sodium sulphide; Analysis of ——. Crespi B465
Influence of sodium bisulphate on yield of —— obtained by fusion of sodium sulphate with carbon. Budnikoff B465
Iodometric determination of ——. Berl and Pfannmüller .. B292
Manufacture of ——. (P) Alvord, and Grasselli Chemical Co. .. B788
and similar substances; Quick method for analysis of ——. Benesch B866
solutions; Purifying ——. (P) Howard, and Grasselli Chemical Co. B633
Volumetric determination of ——. Hassreidter B92
Sodium sulphite; Action of heat in a vacuum on hydrated ——. Picon B510
Activation of oxygen in slow oxidation of ——. Jorissen and Ven den Pol B1011
Sodium sulphites; Manufacture of ——. (P) Drewsen, and West Virginia Pulp and Paper Co. B334
Sodium thiosulphate; Action of heat in a vacuum on hydrated ——. Picon B510
Electrometric investigation of reaction between silver nitrate and ——. Müller B556
solutions; Ageing of volumetric ——. Skrabal B694
solutions; Standardisation of ——. Bray and Miller B968

Sodium tolueneaulphochloramide as substitute for iodine in the cellulose industry. Noll .. B863

Sodium trithionate; Preparation of ——. Raschig .. B827

Sodium tungstate; Continuous process for manufacture of —— from wolframite. Gordon and Spring .. B631

Softening temperatures of plastic materials; Determination of —— by the fluidity method. Bingham .. B390

Soil acidity; Comparison of several qualitative tests for ——. Harper and Jacobson .. B989
acids; Methods of studying strength of ——. Tidmore and Parker .. B1021
atmosphere; Carbon dioxide content of ——. Haselhoff und Liehr .. B606
colloids; Factors influencing binding power of ——. Middleton B1021
drainage investigations. Hendrick .. B304
drainage water; Effect of plants on concentration of ——. Wilson .. B345
gases; Carbon dioxide in ——. Mukerjee .. B482
extracts; Colorimetric determination of nitrate nitrogen in ——. Scales and Harrison .. B646
material; Statistical study of distribution of —— in the United States according to the size of its particles. Jennings .. B760*
materials; Thermal diffusivity and conductivity of some ——. Ingersoll and Koepp .. B760
micro-organisms; Preparation of a nutrient material for ——. (P) Hagermann .. B760
minerals; Influence of oxidation of sulphur on solubility of ——. Stephenson and Powers .. B1021
particles; Influence of electrolytes on total surface of ——. Smolik .. B920
preparation; Possibility of making a bacterial —— for non-legume crops. Makrinoff .. B346
profiles; Organic ——. McCool and Weldemann .. B988
reaction ranges of crop plants; Optimum ——. Wherry .. B801
solution of Hawaiian soils; Iron, aluminium, and manganese in the ——. McGeorge .. B881
solution; Secular and seasonal changes in the ——. Burd and Martin .. B988
suspensions; Effect of —— on solubility of sulphate radical in the system, $Ca(OH)_2$-$CaSO_4$-H_2O. MacIntire and Shaw .. B345

Soils; Absorption of bases by ——. Comber and Saint .. B988
acid; Factors affecting growth of crops on ——. Conner .. B268
acid; Nature of acidity of colloidal clay from ——. Bradfield .. B188
Action of acid fumes on ——. Wieler .. B646
Action of salt solutions on ——. Nolte and Sander .. B685
Action of sodium nitrite in ——. Robinson .. B189
Active acidity of ——. Wherry .. B645
Adsorption and absorption of bases by ——. Jones .. B483
alkali-; Action of sulphur on ——. Kalnuski and Ssolnijewa B801
alkali-; Chemical effects of various treatments of ——. Joffe and McLean .. B989
alkali-; Colloidal phenomena in ——. Joffe and McLean .. B721
alkali-; Comparison of soil solution obtained by displacement method and water extract of ——. Hibbard .. B344
alkali; Leaching of ——. Greaves and others .. B345
alkali-; Origin of ——, and physical effects of treatments. Joffe and McLean .. B881
alkali-; Wood decay in ——. Schmitz .. B645
Ammonia and nitric acid content of ——. Haselhoff and Haun B606
Ammonifying power of arable ——. Perotti and Aureli.. B800
Analysis of —— by means of bacteria. Chouchack .. B722
Apparatus for mechanical analysis of ——. Johnson .. B189
Aqueous vapour pressure of ——. Thomas .. B344
Autotaxic curve as a means of classifying —— and studying their colloidal properties. Vinson and Catlin .. B188
Available state of plant nutrients in ——. Murray .. B646
Behaviour of lime in ——. Lemmermann and Fresenius .. B304
Calcium content of —— in relation to absolute reaction. Swanson and others .. B483
Carbon dioxide content of air above unmanured and dunged ——. Lemmermann and Kalm .. B305
Changes in —— caused by lime and their influence on crops. Drushinin .. B483
Coagulation of clay and phenomena of base exchange and hydration in ——. Gallaly .. B1022
Colorimetric determination of acidity of ——. Barnette and others .. B394
Colorimetric determination of humic matter in mineral ——. Eden .. B881
Colorimetric determination of hydrogen-ion concentration of ——. Kolthoff .. B106
Comparative effects of additions of nitrogen, phosphorus, and potassium on nitrogen economy of silt loam ——. Morris .. B990
Comparative value of dyestuffs of American and German manufacture as indicators in determining acidity of ——. Ramann and Sallinger .. B304
Comparison of sand and solution cultures with —— as media for plant growth. Hoagland and Martin.. B189
Decomposition of organic matter in ——. Starkey .. B645
Desiccation of —— in the open air. Lebediantzeff .. B305
Determination of ammonia in ——. Bengtsson .. B1022
Determination of carbonic acid present as carbonate in ——. Sanyal .. B483
Determination of dye adsorption of ——. (P) Lord .. B1023
Determination of humus content of ——. Fallot .. B645
Determination of hydrogen-ion concentration of ——. Barnette and others .. B989
Determination of inorganic compounds of gel-complex in ——. Tamm .. B66
Determination of nitrate nitrogen in —— in presence of cyanamide and its derivatives. Jacob .. B66
Determination of nitrates in ——. Van Wijk .. B394

Soils—*continued.* PAGE
Distribution of nitrates in —— under maize culture. Blair and Prince .. B645
Determination of nitrates in —— by the phenoldisulphonic acid method. Harper .. B268
Determination of number of bacteria in ——. Methods for disintegration of soil aggregates and preparation of soil suspensions. Whittles .. B881
Determination of potash in ——. Dodd .. B269
Determination of total sulphur in ——. Shaw and MacIntire B66
Direct method of studying microbiology of ——. Winogradsky .. B26, B344
Distribution of fertility in arable —— according to depth. Lebediantzeff .. B436
dried in the air; Modifications in ——. Lebediantzeff .. B436
Easily soluble calcium in —— in relation to acidity and returns from liming. Duley .. B483
Effect of aeration of heavy clay —— upon development of barley. Allison .. B394
Effect of concentration of colloidal clay of —— upon its hydrogen-ion concentration. Bradfield .. B268
Effect of ignition at various temperatures upon certain physical properties of ——. Bouyoucos .. B394
Effect of lime on decomposition of organic matter in ——. White and Holben .. B990
Effect of moisture on colour of ——. O'Neal .. B26
Effect of movement of soil salts on standardisation value of electrodes used in determination of moisture in ——. Deighton .. B66
Effect on present reaction of —— of long-continued applications of equivalent amounts of high-calcium and high-magnesium limes. Burgess .. B990
Effect of sulphur on ——. Adams .. B990
Electrical conductivity of extracts from —— of various types and its use in detecting infertility. Atkins .. B483
Imbibitional moisture of ——. Fisher .. B482
Importance of hydrogen-ion concentration control in physico-chemical studies of heavy ——. Bradfield .. B721
Increase of fertility by desiccation of —— in air under natural conditions. Lebediantzeff .. B436
Influence of nitrogen in —— on azofication. Greaves and Nelson .. B721
Influence of nutritive elements on development of bacteria in ——. Chouchack .. B722
Influence of organic matter on development of fungi, actinomycetes, and bacteria in ——. Waksman and Starkey B721
Influence of removal of colloids on properties of ——. McCool and Wheeting .. B988
Influence of silica, lime, and soil reaction upon availability of phosphates in highly ferruginous ——. McGeorge.. B759
Influence of various salts of calcium, sodium, and potassium on plant growth in acid mineral ——. Miyake and others .. B1022
Influence of water on granulation in ——. Bouyoucos .. B988
Intensity of assimilation of atmospheric nitrogen by forest ——. Němec and Kvapil .. B760
Liberation of potassium and carbon dioxide from —— by fertiliser and acid treatments. Vandecaveye .. B345
Lime requirement, and method for chemical and mechanical analysis of ——. Sokolowski .. B529
Loss of calcium carbonate in drainage water from —— as affected by different chemical fertilisers. Morse .. B483
Lysimetric studies on sub-soils and —— on calcium-magnesium interchange. MacIntire and others .. B106
Measurement of hydrogen-ion concentration in —— by means of the quinhydrone electrode. Billmann .. B482
Measurement of nitrifying power of arable ——. Perotti and Grandis .. B800
Measuring the potential alkalinity of irrigated ——. Scofield B567
Method for directly estimating water-supplying power of —— in the field. Hardy .. B66
Microbiological analysis of —— as an index of soil fertility. Carbon dioxide evolution. Waksman and Starkey .. B394
Microbiological analysis of —— as an index of soil fertility. Decomposition of cellulose. Waksman and Heukelekian B645
Microbiological analysis of —— as an index of soil fertility. Nitrogen fixation and mannitol-decomposition. Waksman and Karunakar .. B721
Microbiological studies of frozen ——. Lochhead .. B1021
Microscopical study of ——. Winogradsky .. B1021
Moisture relationships in ideal ——. Keen .. B482
Neutralisation in —— of sulphuric acid used for destroying weeds. Brioux .. B722
Nitrates and nitrification in field ——. Gowda .. B645
Nitrates and organic matter in ——. Sievers .. B722
Nitrification in some South African ——. Hall .. B989
Nitrification in Sudan ——. Martin and Massey .. B27
Nitrogen balance in arable ——. Rippel .. B800
Nitrogen economy of arable ——. Haselhoff .. B606
Organic phosphorus in ——. Auten .. B26
Partial sterilisation of —— by antiseptics. Matthews .. B268
Partial sterilisation of ——. Microbiological activities and soil fertility. Waksman and Starkey .. B106, B143
Perchloric acid method for determining potassium in ——. Page .. B269
Physical properties of Transvaal ——. Marchand .. B482
Rapid determination of available phosphate in ——. Atkins B483
Reaction of —— in relation to adsorption of calcium. Swanson .. B189
Reciprocal depression exerted by calcic and magnesic additions upon solubility of native materials in surface ——. MacIntire and others .. B345
Replacement of potassium in ——. Vandecaveye .. B345
Resistance of —— to acidification. Demolon and Dupont B1021

Soils—*continued.*
Seasonal variation of nitrates in black turf ——. Van Wijk B882
Shrinkage of ——. Fisher B268
Solubility of natural phosphates in acid humus ——. Brioux B801
Sorghum as an indicator of available nitrogen in ——. Pinckney B645
Sterilisation of greenhouse ——. Brown and others B645
Studies on flora of ——. Martin B344
Studies on virgin and depleted ——. Millar B344
Sulphate content of ——. Kalnskski B800
Sulphur cycle in ——. Biology of thiosulphate bacteria. Klein and Limberger B189
Sulphur oxidation in Oregon ——. Halversen and Bollen B345
Supposed liberation of potassium from —— by calcic and magnesic additions. MacIntire and others B27
treated with different organic manures; Biochemical conditions of ——. Haselhoff and Liehr B006
Utilisation of nitrogen in —— as affected by lime. Lipman and Blair B436
Value of analysis of —— when limited to an intensive single cropping system. McGeorge B759
Value of sulphur in improvement of ——. Lipman U394
Variability of —— as determined by statistical methods. Post B645
Solanine content of potatoes. Bömer and Mattis B487
Solanum elæagnifolium berries; Milk-coagulating enzyme of ——. Bodansky B960
Solarisation. *See under* Photographic.
Solder; Aluminium ——:
(P) Metallbank and Metallurgische Ges. B301
(P) Stumpf B793
Soldered joints; Properties of soft ——. Crow 65T, 69T, B427
Soldering aluminium; Alloy flux for ——. (P) Bolus B340
Fluxes for soft ——. Crow B474
metal objects. (P) Amag Automatische Massdraht-Kettenwerke A.-G. B985
Solid solutions; An experiment in solid diffusion and its possible bearing on structure of ——. Thompson and Dearden B427
Solidifying materials that solidify with a rise in temperature. (P) Cowles, and Electric Smelting and Aluminum Co. B520*
organic liquids. (P) Ray B327
Solids; Apparatus for treating —— with gases. (P) Sleck, jun., and Sleck and Drucker, Inc. B3
Apparatus for treatment of —— in a gaseous atmosphere. (P) Perezel B793
Rôle of water in reactions between ——. Balarew B595, B1011
Separation of —— from liquids. (P) Dohr, and Kober Chemical Co. B1030
Soluble matter in liquids; Determination of ——. (P) Walker B690
substances; Calculation of amount of —— in foodstuffs etc., by Windisch's method. Grossfeld B961
Solutions; Machine for mixing and discharging ——. (P) Jones B159
for medical injection; Manufacture of ——. (P) Soc. of Chem. Ind. in Basle U400
Production of aqueous —— of therapeutic value, containing metal salts insoluble in water. (P) Wachtel B493
of sparingly soluble substances; Preparation of ——. (P) Pohl B809
of substances insoluble or sparingly soluble in water; Preparation of ——. (P) Wieland B809
Solvent naphtha. *See under* Naphtha.
recovery plants; Pumps for ——. (P) Schmidt B543
Solvents for cellulose esters, resins, oils, and the like. (P) Chem. Fabr. Kalk, and Oehme B527
Chemical basis of cresol process for recovery of volatile ——. Weissenberger B773
Frame to make possible, in the same apparatus, recovery of —— by distillation after an extraction process. (P) De Lacy B41
Lowering of boiling point in mixtures of varnish ——. Myhrvang B739
for organic compounds. (P) Clough and others B495
Recovery of volatile ——. (P) Pickford B374
Recovery of volatile —— from gases. (P) Goerz Photochem. Werke B930
for resins, siccatives, colours, turpentine, tar oils, perfumes, and other organic substances. (P) Badische Anilin und Soda Fabrik B682
Soot-removing composition. (P) Loeber B663
Soporifics. (P) Bayer und Co. B577
Sorbite in steel; Pearlite, troostite, and ——. Schrader B385
Sorghum; Effect of nitrate applications upon hydrocyanic acid content of ——. Pinckney B722
as an indicator of available soil nitrogen. Pinckney B645
syrup; Starch in ——. Willaman and Davison B648
Soya bean miso; Oil from ——. Kodama B504
bean oil. *See under* Oils, Fatty.
beans; Effect of mineral fertilisers on nodulation of ——. Perkins B760
beans; Natural soaps in ——. Muramatsu B839
beans; Nodulation of ——. Perkins B760
sauce; Reaction between formaldehyde and ——. Ishio and Endo B30
Sparassis ramosa; Crystalline metabolic product from ——. Falck B151
Sparassol:
Späth and Jeschki B399
Wedekind and Fleischer B766

Sparassol—*continued.*
Constitution of ——.
Pfau B399
Wedekind and Fleischer B151
Spathulatine, a new alkaloid from *Lupinus spathulatus* (Rydb.). Couch B1028
Specific gravity of gases; Apparatus for determining ——. (P) Lieso B696
gravity of solids; Direct-reading apparatus for determining approximate ——. Vuilleumier B694
gravity tables; Graphical ——. Deming B621
heats of metals at high temperatures; Measurement of ——. Smith and Bockstahler B984
Specification for asphalt for mineral-surfaced roofing; U.S. Government —— B714
for asphalt primer for roofing and waterproofing; U.S. Government —— B714
for asphalt for waterproofing and damp-proofing; U.S. Government —— B858
for coal-tar pitch for roofing; U.S. Government ——. B860
for coal-tar pitch for waterproofing and damp-proofing; U.S. Government ——. B666
for flat glass for glazing purposes; U.S. Government B747
Spectrometric determinations; Combined apparatus for photometric, polarimetric, and ——. (P) Jobin and Yvon B814*
Speiss; Blast-roasting of —— with ferrous chloride. Diedenhofen B99
Spelter; Determination of cadmium in ——. Barrs 77T, B520
Spent oxide. *See under* Oxide.
Spinach leaves; Spinacin, a new protein from ——. Chibnall B961
Spinacin, a new protein from spinach leaves. Chibnall B961
Spirit; Production of refined ——. (P) Carthaus B687
Spirits; Determination of acetaldehyde in ——. Beythien and others B950
Rate of loss of strength of —— kept exposed to the air. Lowe B348
Spongy materials; Manufacture of ——. (P) Lefebure B757
Spontaneous ignition meter; Studies with the Moore ——. Ormandy and Craven B700
Spray liquids; Physics of ——. Properties of wetting and spreading. Woodman B803
liquids for plants ——. (P) Raschig B442
mixture for plants. (P) Kalusowski, and Schnarr and Co. B351
Spruce wood; Decomposition of —— with alkali and treatment of the various products formed by heating under high pressure at a high temperature. Hägglund B903
wood; Lignin content of ——. Klason B89
wood; Lignosulphonic acid obtained by action of sulphurous acid on ——. Dorée and Hall 257T, U783
Squalene; Formation of artificial petroleum from ——. Kawai and Kobayashi B121
Squills; Manufacture of cardiac glucoside of ——. (P) Chem. Fabr. Sandoz B692
Stannic acids; Siloplest ——. Willstätter and others B907
Stannic chloride; Distillation of arsenious chloride, antimonious chloride, and ——. Böttger B378
Stannic sulphide; Carrying-down of cobalt and nickel by ——. Auger and Odinot B318
Starch; Absorption of water by dried films of boiled ——. Farrow and Sloan B108
Absorptive power of —— for gases and its action on magnesium alkyl derivatives. Costa B531
Action of hypochlorous acid on ——. Craik 173T
Action of potassium iodide on saccharification of —— by various amylases. Holmbergh B395
Constitution of amyloses. Pringsheim and Leibowitz B530
Constitution of —— and of lichen starch. Pringsheim and others B921
Decomposition of —— by salts. Iljin B347
Degradation of —— by animal amylase. Holmbergh B306
Determination of —— in barley and wheat. Ling and others B991
Determination of —— in meat products. Düring B570
Determination of —— in plants. Thomas B723
Determination of —— by the use of picric acid. Coe and Bidwell B395
Different structures of two constituents of ——. Pringsheim and Wolfsohn B531
Effect of formaldehyde on determination of —— in plants. Sabalitschka and Riesenberg B306
Elasticity and tensile strength of ——. Neale B903
forming a paste with cold water; Production of ——. (P) Stein B485
Gelatinisation of wheat and maize —— by heat. Alsberg and Rask B686
Halogen compounds of ——. Bergmann and Ludowig B648
Halogen compounds of polyamyloses. Pringsheim and Steingroever B921
Hexahexosan obtained from ——. Pictet and Stricker B957
Hydrolysis of —— by emulsin. Kuhn B609
Hydrolysis of —— by hydrogen peroxide for preparation of finishing pastes. Sunder B1010
Hydrolysis of —— by salts. Hydrolysis by inorganic catalysts (artificial oxydases). Biedermann and Jernakoff B991
iodide. Lottermoser B271
-iodine reaction. Dhar B271
Limiting hydrolysis of —— and a complement of the amylases:
Pringsheim and Beiser B843
Pringsheim and Schmalz B28
Manufacture of modified ——. (P) Weiss B27

PAGE

Starch—*continued.*
New products of enzymic fission of ——. Sjöberg .. B921
Optical determination of —— in technical starch products and in parts of plants by means of the interferometer. Wolff B567
paste; Flow of —— through capillary tubes. Farrow and Lowe B50
paste; Relation between viscosity of wheat —— and the concentration and temperature. Yoshino B144
Preparation for removing —— from textiles. (P) International Takamine Ferment Co. B112
Preparation of —— which forms a paste with cold water. (P) Runge B68
preparations; Manufacture of ——. (P) Plauson B191
products; Preparation of alkali ——. (P) Sichel Komm. Ges., and Stern B437
Rotation of maltose produced by decomposition of —— by malt extract. Von Euler and Helleberg B957
soluble in cold water; Production of ——. (P) Neustadt and Neustadt B609
Solubility and insolubility of ——. Malfitano and Catoire .. B108
solutions; Preparation of ——. (P) Reychler B145
Synthesis of —— from sugar by bacteria. Grey B686
syrup; Acidity of ——. Ekhard B108
Treatment of —— for production of maltose and other substances. (P) Ling and Nanji B992
Viscosimetric study of wheat ——. Rask and Alsberg .. B532

Starches; Amylopectins prepared from different ——. Samec and others B608

Starching composition; Fire-resisting or flame-proof ——. (P) Mathias, and Victor Chemical Works B742

Steam-distillation. *See under* Distillation.
Industrial utilisation of terrestrial ——. Ginori B2
power plants; Apparatus for eliminating corrosive effect of gases absorbed by condensed steam in —— having boilers fed therewith. (P) Szikla B281
-tight joints for autoclaves, kiers, vulcanising chambers, and similar apparatus. (P) Mycock B699*
Utilisation of exhaust —— from condensing engines for heating an evaporator. Nickle B815

Stearic anhydride. Holde and others B264

Stearoptene occurring in some essential oils of the *Myrtaceæ*. Penfold and Morrison B576

Steel; Absorption of sulphur by —— from the heating gas in the Siemens-Martin open-hearth furnace. Jung .. B750
Action of salt solutions on —— in presence of oxygen. Evans 315T
Alloy ——:
(P) Bratton, and Climax Molybdenum Co. B717
(P) Evans B914
alloy-; Heat-resisting articles of ——. (P) Armstrong, and Ludlum Steel Co. B637
alloy material. (P) McMahon B874
Alloy —— for metal cutting tools. (P) Corning and Armstrong B637
alloys:
(P) Evans, and Cyclops Steel Co. B561
(P) Hadfield B874
alloys; Chromium ——. (P) De Long and others B475
alloys; Determination of boron in ——. Sentie B759
alloys; Hardening ——. (P) Fry, and Krupp A.-G. .. B389*
alloys having high resistance against attack of sulphurous acid at high temperatures and pressures. (P) Krupp A.-G. B60
alloys having high resistance against corrosion by ammonium chloride solutions. (P) Krupp A.-G. B60
alloys; Manufacture of ——:
(P) Hamilton and Evans B338
(P) Saklatwalla B751
alloys; Manufacture of —— in electric furnaces. (P) Petinot, and U.S. Ferro-Alloys Corp. B792
Apparatus for determination of sulphur in ——. Müller .. B425
articles subjected during manufacture to the action of a testing load; Manufacture of ——. (P) Daeves and Weissenberg B637
Carburising ——. (P) Tashiro B182*
Case-hardening ——. (P) Bailey B221
Case-hardening of —— by boron and nitrogen. Campbell and Fay B677
castings; Composition for moulds for——. (P) Robinson and Gray, jun. B522
Cementation of ——. (P) Grönqvist B300
Cementation or case-hardening of ——. (P) Baumgardner .. B522
Changes of volume of —— during heat treatment. Aitchison and Woodvine B833
chromium-; Manufacture of ——. (P) Petinot B792
Coating sheet —— with aluminium. (P) Peacock and Waldo B475
Colouring —— black. (P) Utendörfer B561, B794*
Comparative tests on basic and acid ——. Schmitz .. B97
Comparison of deoxidation effects of titanium and silicon on properties of rail ——. Burgess and Quick B258
Composition for hardening ——. (P) Bassett B717
Composition for removing rust from, and cleaning ——. (P) Siegel and Pödder B876*
converters; Ignition of the charge in small acid ——. (P) Zenzes Ges. B562
Critical studies on methods of determining manganese in ——. Congdon and Neal, jun. B220
Critical study of methods of determining carbon in ——. Congdon and others B984
Crystal structure of hard ——. Heindlhofer B1015

Steel—*continued.*
Decarburisation and absorption of nitrogen and silicon on heating —— at 1100°–1300° in a current of nitrogen. Oberhoffer and Heger B59
Definition of ——. Honda B219
Desulphurising ——. (P) Jackson and others B874
Deterioration of —— caused by occlusion of hydrogen. Majima B220
Determination of carbon in ——. Stanley B871
Determination of carbon in —— by combustion in a current of oxygen. Van Royen B425
Determination of manganese in ——. Vernay B715
Determination of manganese in —— by the silver nitrate-persulphate method. Swoboda B635
Displacement of pearlite eutectic point in —— by nickel and chromium. Aall B336
Economic significance of metalloids in basic pig iron in manufacture of —— by the basic open-hearth process. Kinney, jun. B297
Effect of carbon and strain on specific heat of carbon ——. Honda B912
Effect of changes in total carbon and in the condition of carbides on magnetic properties of ——. Smith and others B125
Effect of changes in total carbon and in the condition of carbides on the specific resistance and on some magnetic properties of ——. Campbell and Whitney B832
Effect of hydrogen-ion concentration on the submerged corrosion of ——. Whitman and others B677
Effect of impurities on dendritic structure of carbon —— and their diffusion at high temperatures. Ishiwaka .. B911
Effect of zirconium on hot-rolling properties of high-sulphur ——, and occurrence of zirconium sulphide. Field B470, B715
Effects of penetration of arsenic and sulphur into ——. Hindley B519
Effects of temperature on properties of ——. Matlock .. B220
Electrometallurgical refining of ——. (P) Scharschu, and General Electric Co. B475
Embrittling of —— by caustic alkali solutions. Williams and Homerberg B471
Fatigue of ——. Ono B946
Free and pearlitic cementite in ——. Maurer and Stäblein B871
furnaces; Operation of electric ——. (P) Dixon B637
furnaces; Regulation of gas producers and Siemens-Martin ——. Bulle B424
furnaces; Repairing linings of ——. (P) Kernohan and Hall B221
Hardening of ——. Rosenhain B832
Heat treatment of ——. (P) Comp. des Forges de Châtillon, Commentry et Neuves-Maisons B1017
High elastic limit mild —— and its general applications. Barr and others B470
high-speed; Influence of cobalt and vanadium on properties of ——. Oertel and Pölzguter B912
high-speed; Influence of heat treatment on cutting properties of ——. Pomnerenke and Dewert B715
high-speed; Manufacture of ——. (P) Brookfield B678
high-speed; Nature of ——. Grossmann and Bain B833
high-speed; Production of tools of ——. (P) Langenberg B581
high-speed tool-; Determination of silicon in ——. Vernay B635
Immersed in water; Influence of alkaline solutions on corrosion of ——. Speller and Texter B947
Improvements in Brinell test on hardened ——. Hultgren B835
Influence of fluorine in the deoxidising slag on refractories in the manufacture of —— in basic electric furnaces. Sisco B945
Influence of nitrogen of nitrogenous materials in cementation of ——. Musatti and Croce B177
ingots; Origin of blow holes in ——. Trouble B599
Kinetics of tempering of ——. Fraenkel and Heymann .. B559
K-8 ——. Schulz B1015
Magnet ——, with special reference to relation between carbon content and magnetic properties. Hannack B946
manganese-; Heat treatment of ——. (P) American Manganese Steel Co. B20
manganese-; Manufacture of ——:
(P) Jordan and others B180, B792
(P) Soc. Anon. des Hauts Fourneaux, Forges, et Aciéries de Pompey B427
manganese-; Melting ——:
(P) American Manganese Steel Co. B794*
(P) Nicholls, and American Manganese Steel Co. .. B600
manganese-; Melting scrap —— in an electric furnace. (P) American Manganese Steel Co. B340*
Manufacture of ——:
(P) Clark B949
(P) Commercial Steel Co. B751
(P) Coplan B794*
(P) Davison and Laffey B475
(P) Flössel B60
(P) Griffiths and Blacet B137
(P) Moxham and Laffey B430*
(P) Smith and Claassen B522
Manufacture of —— direct from ore. (P) Moxham and Laffey B475
Manufacture of —— by direct treatment of ores freed from gangue. (P) Constant and Bruzac B221
Manufacture of —— and fixation of nitrogen:
(P) Nagelvoort, and Nitrogen Corp. B794*
(P) Nitrogen Corp. B637
Manufacture of rustless ——. (P) Berlin B717
Manufacture of special —— without nickel. (P) Glockenstahlwerke vorm. Lindenberg B678

PAGE

Steel—*continued.*
Method of detecting phosphorus segregation in ——. Canfield .. B424
Mixture for removing rust from ——. (P) Siegel and Pödder B679
Mode of retention of nitrogen in welded joints of —— made by the electric arc method. Willey 263T, 267T
Natural water corrosion of —— in contact with copper. Whitman and Russell .. B385
Nature of martensite in ——. Bain .. B384
nickel-; Softening of a martensitic ——. Aall .. B871
Osmondite in ——. Maurer .. B599
Pearlite, troostite, and sorbite in ——. Schrader .. B385
Penetration of bronze into —— at high temperatures. Perrin .. B946
Physical properties, correlated microstructure and machining qualities of rifle-barrel ——. Jewell .. B18
Pickling ——. Action of acid solutions on mild steel and diffusion of hydrogen through the metal. Edwards .. B833
pipes; Heat transference in small ——. Blake and Peters, jun. .. B773
Potentiometric determination of vanadium and chromium in ——. Kolthoff and Tomicek .. B969
practice; Recovery of waste heat in open-hearth ——. Dyrssen .. B518
Production of ammonia, carbon dioxide, and nitrogen in connexion with manufacture of ——. (P) Arnold, and Nitrogen Corp. .. B671
Properties of medium carbon —— with high manganese content. Jones .. B750
Rapid determination of carbon in —— by measurement of electrical resistance. Linke .. B789
Recrystallisation phenomena in continuously stressed ——. Riede .. B715
Reduction of manganese consumption in deoxidation of ——. (P) Eisen- u. Stahlwerk Hoesch A.-G., and Backheuer .. B428
Removing rust from ——. (P) Von Karlowski .. B752
silico-manganese-; Hardening of ——. Colbeck and Hansen B519
silicon-; Barkhausen effect in ——. Tyndall .. B1015
silicon-; Effect of annealing on magnetic properties of sheets of —— used in electrical construction. Cazaud .. B519
Solidus curve of austenite. Asahara .. B219
Specific and latent heats of ——. Mallock .. B912
Stainless —— with particular reference to the milder varieties (stainless iron). Moneypenny .. B97
Surface decarburisation during heating of ——. Schulz and Neimeyer .. B258
Temper colours on ——. Gale .. 349T
titanium-; Manufacture of ——. (P) Mathesius and Mathesius .. B949
tramway rails; Macrostructure of welded joints in ——. Jimeno and Del Fresno .. B874
Treatment of ——:
(P) Freitas .. B475
(P) Graham .. B561
(P) Sicard, and United States Ferro Alloys Corp. B180
Treatment of molten ——. (P) Billings, and Billings Iron and Steel Co. .. B339
tungsten-; Determination of tungsten in ——. Swoboda B425
Uniting copper to ——. (P) Austin .. B1018
Use of amalgamated zinc in evolution method for determination of sulphur in ——. Ashida .. B385
Volumetric determination of sulphur in ——. Pinsl .. B177
Volumetric determination of vanadium in ——. Etheridge B97, B259
X-ray studies on crystal structure of ——. Westgren and Phragmén .. B518
zirconium-; Manufacture of ——:
(P) Becket, and Electro Metallurgical Co. .. B262, B876*
(P) Electro Metallurgical Co. .. B387
zirconium-; Manufacture of heat-treated ——. (P) Becket and others .. B600

Steels; Alloy ——:
(P) Hatfield and Green .. B180
(P) Saklatwalla .. B600
alloy-; Defects in ——. Schleicher .. B18
alloy-; Manufacture of low-carbon ——. (P) Petinot, and United States Ferro-Alloys Corp. .. B339
Alloy metals used in alloy ——. Vogel .. 365T
Analysis of special ——. Determination of manganese. Kropf .. B177
Boron ——. Freytag and Jenge .. B750
chrome-nickel; Influence of deoxidation on hot working and other properties of structural ——. Oertel and Richter .. B470
chromium-; Re-examination of solubility line for carbon in ——. Oberhoffer and others .. B471
Differentiation of —— by examination of their grindstone sparks. Pitois .. B425, B519
Forging temperatures of ——. Honda .. B518
Gases extractable from heated ——. Parravano and Del Turco .. B176
Gases and oxygen in ——. Parravano and Scortecci .. B176
nickel-; Invar and related ——. .. B18
nickel-; Relation between elastic tension and magnetic behaviour of —— in the neighbourhood of the transformation point. Del Regno .. B946
Stainless ——. Abram .. B425
tungsten-; Re-examination of solubility line for carbon in ——. Oberhoffer and others .. B471

Stellite and similar alloys:
Drescher .. B1015
Schulz .. B1015

Stencils; Production of ——. (P) De Waele .. B708

Stereoisomeric aromatic diamines; Nitration of ——. Morgan Hickinbottom .. 307T, B901

Sterilising agent; Relation between time of action and concentration of a ——. Richet and Le Ber .. B765
food and beverage products. (P) Andrews and others B651
by heat; Alteration of physiological properties of medicaments by ——. Breteau .. B1028
liquids; Apparatus for ——. (P) Turner, and Electropure Corp. .. B196
liquids and gases. (P) Sauer .. B995
liquids by means of ultra-violet rays; Apparatus for ——:
(P) Ailhaud .. B614
(P) Henri and others .. B311*
medicines. Hillen .. B1028
medium. (P) Thésée .. B652
milk or other liquids; Apparatus for ——. (P) Stevenson B612*
and other purposes; Treatment of liquids for ——. (P) Rafn .. B962

Sterols; Separation of unsaturated from saturated ——. Anderson and Nabenhauer .. B846

Stibinic acids; Preparation of complex compounds of aromatic ——. (P) Chem. Fabr. von Heyden .. B810

Stick-lac. Tschirch and Lüdy, jun. .. B103

Stills:
(P) Lamplough and Harper .. B698*
(P) Major .. B584*
Apparatus for indicating liquid levels in high-pressure ——. (P) Int. Bergen-Cie. voor Olie- en Kolen-Chem., and Löffler .. B657
Cooling oil ——. (P) Watkeys, and Gulf Refining Co. .. B165
Design of column —— for distilling solutions of partly miscible liquids. Mains .. B855
for distillation of fatty acids. (P) Müller .. B432
Fractionation tower for pressure cracking ——. (P) Bell, and Sinclair Refining Co. .. B550
for mineral oils. (P) Lamplough and Harper .. B326

Stirring; Relation between rate of —— and reaction velocity in heterogeneous systems. Klein .. B855

Stone, artificial; Manufacture of ——:
(P) Clegg and Whittaker .. B983
(P) Jura Oelschieferwerke A.-G. .. B832
(P) Rhenania Ver. Chem. Fabr. A.-G., Zweigniederlassung Mannheim, and Böhm .. B297
artificial; Manufacture of —— and hydraulic cement from shale slag. (P) Schmidt and Hahnle .. B911
artificial; Manufacture of —— from magnesia cement. (P) Schnarr .. B384
artificial; Manufacture of material for forming ——. (P) Riedel A.-G. .. B297
artificial; Manufacture of —— from oil-shale clinker. (P) Jura Oelschiefer-Werke A.-G. .. B336
Exposure tests on colourless waterproofing materials for ——. Kessler .. B383
-like material; Manufacture of a ——. (P) Jeckel, Mijnssen & Co. .. B598
Manufacture of reconstructed ——. (P) Harrison .. B714
Preservation of ——. (P) Laurie .. B911

Strainers; Rotary ——. (P) Brackett, and Brackett and Co. B4*

Straining apparatus:
(P) Fischer and Beldam .. B1000
(P) Fulcher .. B544*

Straw gas; Experimental production of ——. Roethe .. B120
and like vegetable matter; Treatment of —— for production of fertilisers etc. (P) Marris, and Walker and Sons .. B346
Manufacture of cellulose from ——:
(P) Bäcker .. B826
(P) Von Ordody .. B826
Recent methods of making paper from ——. Altmann .. B706

Strontium; Manufacture of alloys of barium or —— with lead. (P) Kroll, and Metallbank u. Metallurgische Ges. .. B301
New reaction producing ——. Matignon .. B60

Strontium carbonate; Solubility of —— in water under high pressure of carbon dioxide, and properties of the solutions. Haehnel .. B867
Thermal effects on heating curve of —— in graphite tubes. Tammann and Grevemeyer .. B215

Strontium compounds; Separation of soluble calcium compounds and ——. (P) Rhenania Ver. Chem. Fabr., and others B711

Strontium oxide; Thermal effects of heating curve of —— in graphite tubes. Tammann and Grevemeyer .. B215

Strontium salts; Manufacture of soluble —— from residues from manufacture of strontium sulphide. (P) Rhenania Ver. Chem. Fabr. A.-G. .. B632

Strychnine; Constitutional formula of ——. Oliveri-Mandala B887
Determination of ——. Short .. B805
in *nux vomica* preparations; Determination of ——. Deane and Edmonton .. B805

Strychnos Cinnamifolia; Analysis of ——. Short .. B805

Styrene as a constituent of carburetted water-gas tar. Brown and Howard .. B48

Sublimation apparatus:
(P) Byk-Guldenwerke Chem. Fabr. .. B282
(P) Gibbs .. B407
(P) Hortvet .. B322

Succinic acid; Production of ——. (P) Craver, and Barrett Co. B578

Succinimides; Preparation of CC-substituted ——. (P) Meister, Lucius, u. Brüning .. B811

PAGE

Sucrose; Action of heat on ——. Pictet and Andrianoff B882
Action of hydrogen peroxide and hypochlorous acid on ——. Craik .. 172T
Action of ultra-violet radiations on solutions of ——. Beyersdorfer and Hess .. B957
Clarification of sugar products for determination of —— by double polarisation. Haddon .. B530
content of solutions of syrups, massecuites, molasses, and the like; Amplification of Van Moll's tables for reading the purity and ——. Earle .. B108
Detection and colorimetric determination of —— in presence of other sugars. Riffart and Pyriki .. B1023
Determination of —— in plants. Thomas and Dutcher .. B723
Determination of traces of invert sugar in —— for use in establishing the 100° point of the saccharimeter. Kolthoff B68
Dextrose from ——. Colin and Chaudun .. B920
Double polarisation method of determining ——. Sazavsky B608
Formation of dextrins during inversion of ——. Bruins .. B144
Formation of gum levan from ——. Owen .. B107
Inversion of —— and determination of hydrion concentration. Duboux .. B957
Isolation of —— from mixtures of dextrose, lævulose, and ——. Komatsu and Tanimura .. B530
Rapid detection of —— in milk. Pozzi-Escot .. B228
Repeated use of same preparation of invertase for inverting ——. Schmidt .. B992
Results given by different modifications of double polarisation method of determining —— in cane molasses. Woods B530
Saturation relations in mixtures of dextrose, lævulose, and ——. Jackson and Silbee .. B956
Variation of optical activity of —— on heating. Rakusin and Nesmejanow .. B956
in wines. Fallot .. B843
See also Sugar.

Sugar analysis; Slide rule for apparent purity calculations in ——. Bastone .. B271
in bagasse; Determination of —— by cold extraction. Nieboer .. B608
from beets; Purifying juices and syrups in extraction of ——. (P) De Vecchis .. B991
Boiling process in manufacture of ——. (P) Grántzdörffer B68
-cane; Crushing ——. (P) Aitken .. B191*
-cane; Extracting juice and obtaining fuel from ——. (P) Mitchell and Wuthrich .. B306
-cane fibre; Pectic substance of ——. Farnell .. B106
cane-; Influence of water-insoluble matter upon polarisation of raw ——. Hardin .. B189
-cane juice; Clarification of —— by superheating before liming. Bird .. B607
-cane juice; Colloidal clarification of —— using aluminium silicate and lime. Wells .. B270
-cane juice; Colloids of ——. Farnell .. B647
-cane juice; Effect of cold and hot liming on removal of albumin from ——. Farnell .. B647
-cane juice; Effect of filtration with vegetable carbons and kieselguhr ("Filtercel") on number of micro-organisms in —— and on their subsequent rate of development. Owen .. B530
-cane juice; Refining ——. (P) Hapgood, and De Laval Separator Co. .. B609, B957
-cane juice; "Super-defecation" of ——. Horne .. B685
-cane juice and syrups; Pectin and pentosan content of ——, and its removal. Farnell .. B920
cane-; Removal of gummy, oily, and waxy matters from raw ——. Keyworth and Forster .. 203T, B685
Carbonatation process in manufacture of white ——. Maxwell B270
Cause of difficult filtration of solutions made from Hawaiian raw ——. Smith .. B607
charcoal. *See under* Charcoal.
Clarification and decolorisation in manufacture of white ——. (P) Ragg .. B802
Comparative inverting power of mould fungi concerned in deterioration of raw ——. Owen .. B107
Comparative rates of moisture absorption by plantation white and refined granulated —— Owen .. B226
content of leather; Determination of ——. Frey .. B643
content of solutions; Determination of —— by measurement of the electrical conductivity. Pollak .. B920
Covering with evaporator syrup in manufacture of white ——. Lesueur .. B270
Crystallisation of ——:
(P) Delafond .. B109
(P) Hinze, and Sudenburger Maschinenfabr. u. Eisengiesserei A.-G. .. B395
crystals; Disintegrating ——. (P) Fairrie .. B531
crystals; Washing ——. (P) Phillipp .. B485
Determination of —— in sweet wines, particularly in Madeira wines. Klein .. B486
Diffusion process for extraction of —— from beets. (P) Steckhan .. B68
Effect of formaldehyde on determination of —— in plants. Sabalitschka and Riesenberg .. B306
Extraction of —— from beets. (P) Graham .. B144
extraction; Introduction of molasses into the diffusion battery during the process of beet ——. Hamous .. B107
factories; Clarification in raw ——. Roxas and Africa .. B920
factory evaporators; Incrustation of tubes of ——. Van der Linden .. B991
factory products; Surface tension of ——. Lindfors .. B802
Grape ——. *See* Dextrose.
industry by-products; Occurrence of substances hindering inversion in ——. Erdenbrecher .. B167
Influence of —— on setting and hardening of cement and cement-mortars. Burchartz and Van Wrochem .. B296

Sugar—*continued*. PAGE
invert-; Preparation of lævulose and dextrose from ——. (P) Herzfeld and Passer .. B68
invert-; Repeated use of invertase for inversion of sucrose in preparation of ——. Schmidt .. B108
juice; Action of lime on non-sugars precipitated in defecation of beet ——. Stanek .. B647
juice; Centrifugal decanting or clarifying apparatus for ——. (P) Reynolds .. B306
juice; Cold defecation of beet —— with lime. Vondrak .. B801
juice; Defecating ——. (P) Horne .. B568
juice; Determination of dry substance in beet ——. Brown .. B685
juice evaporators; Removal of scale from cane —— with the use of ammonium fluoride. Van der Linden .. B107
juice; Extraction of —— from desiccated beets. Lefeuille .. B801
juice and the like; Apparatus for straining or filtering ——. (P) Peck .. B226
juice and liquors; Sterilisation of —— by treatment with "Filter-cel" (kieselguhr). Calvert and Knight .. B226
juice; Neutral clarification, its determination, and its effect on the lime content of the clarified ——. Allen .. B67
juice; Preservation of samples of ——. Orth .. B530
juice; Process for treating ——. (P) Sauer .. B306
juice; Purification of crude ——. (P) "Reinzucker" Ges. für Patentverwertung .. B437
juice; Treatment of beet —— by hot inversion. (P) Mathis .. B648
juice; Use of dolomitic lime for carbonatation of beet ——. Knor .. B270
manufacture:
(P) Dorr, and Dorr Co. .. B883
(P) McHugh, and Dorr Co. .. B802
manufacture; Comparison of filter-press results with single and double pressing in ——. Allen .. B226
manufacture; Report on Petree process of ——. Peck .. B437
Process of treating ——. (P) Fowler, and National Candy Co. B686
product; Preparation of an improved ——. (P) Hughes, and Hughes, jun. .. B109
products; Application of iodometric method to analysis of ——. Hinton and Macara .. B189
products; Clarification of —— for determination of sucrose by double polarisation or of reducing sugars. Haddon .. B530
products; Clarification of —— prior to determination of reducing sugars. Eynon and Lane .. B107
Recovery of —— from beet molasses. (P) McHugh .. B108
Recovery of —— from filter-press cake etc. (P) Delafond .. B109
Recovery of —— from molasses by the Friedrich and Rajtora process. Saillard .. B991
refining; Centrifugal separator baskets for ——. (P) Roberts .. B992
Refining and manufacture of —— with production of decolorising carbon and potassium alum. (P) Elliott .. B109
Refining raw ——. (P) Hinze, and Sudenburger Maschinenfabr. u. Eisengiesserei A.-G. .. B921
Refining raw —— with the use of decolorising carbon in the form of plates. Wohryzek .. B107
Refining —— from refuse molasses. (P) Cutler, and United States Syrup Co. .. B609
refining; Separation of product of treatment of waste liquors in —— with sulphurous acid. (P) "Reinzucker" Ges. für Patentverwertung .. B843
solution; Polarisation of the normal ——. Re-testing the 100° point of the saccharimeter. Kraisy and Traegel .. B608
solutions; Comparative adsorption of ash constituents from —— by vegetable and bone charcoals Horton and Sengson B270
solutions, especially molasses and syrups; Purification of ——. (P) Urban .. B485
solutions; Evaporation rate of ——. Bagster .. 63T
solutions; Filtering apparatus for ——. (P) Vachier .. B145
solutions; Filtration or decolorisation of ——. (P) Russell .. B271
solutions and massecuite; Concentrating ——. (P) Phillipp .. B485
solutions; Purifying and decolorising ——. (P) Sauer .. B608
syrup; Manufacture of a high-grade adhesive and —— from extracted beet slices. (P) Smolenski .. B437
syrups; Use of lime containing magnesia for carbonatation of evaporator beet ——. Kohn .. B608
in tanning extracts etc.; Reducing action of artificial tannins in determination of —— with Fehling's solution. Lauffmann B344
waste-waters, raw juices, or pulp-press waters; Separation of precipitate formed in sulphitation of ——. (P) Kowalski Syndikat .. B883
See also Sucrose.

Sugars; Determination of —— by the use of picric acid. Coe and Bidwell .. B395
Examination of photosynthetic —— by the methylation method. Irvine and Francis .. B957
Formation of compounds between salts and ——. Validity of Geerligs' theory of the formation of molasses:
Helderman .. B647
Kolthoff .. B647
Purification and concentration of enzyme solutions for rapid analysis of ——. Reynolds .. B271
reducing; Clarification of sugar products prior to determination of ——:
Eynon and Lane .. B107
Haddon .. B530
reducing; Determination of copper by Zecchini's method and its application to determination of ——. Fleury and Tavernier .. B686
reducing; Determination of —— by means of alkaline copper solution. Maquenne .. B144
reducing; Determination of —— in plants. Thomas and Dutcher .. B723
reducing; Effect of certain de-leading agents upon hydrolysis in the determination of —— in leather and tanning extracts. Clarke and Frey .. B528

Sugars - *continued.*
reducing; Iodometric determination of cuprous oxide in presence of cupric ions, and its application to determination of ——. Blanchetière .. B772
reducing; Modifications of the picric acid method for determining ——. Willaman and Davison .. B957
Unsaturated reduction products of —— and their transformations. Bergmann and others .. B190
Sulpharsphenamine; Determination of total sulphur in ——. Elvove B767
Sulphatase. Neuberg and Linhardt .. B28
Sulphates; Acid —— and pyrosulphates. Cambi and Bozza .. B14
Apparatus for continuous production of ——. (P) Bley .. B943
Apparatus for conversion of alkali and alkaline-earth —— into sulphides. (P) Lawry .. B869
Behaviour of —— in the flotation process. Berl and Pfannmüller .. B792
Continuous production of ——. (P) Trevoux, and Soc. Anon. Prod. Chim. Etabl. Maletra .. B295*
Decomposing ——. (P) Metallbank u. Metallurgische Ges. A.-G. B422
Determination of —— by Hahn's method at great dilutions. Kolthoff and Van Cittert .. B92
Electrometric determination of soluble ——. Müller and Wertheim .. B619
Kilns for calcining alkaline-earth ——. (P) Akt.-Ges. f. Anilin-Fabr. .. B17
Manufacture of alkali —— and hydrochloric acid:
(P) Brandenburg .. B419
(P) Weber .. B746
Manufacture of ammonium sulphate and pure, anhydrous alkali ——. (P) Bambach .. B633
Manufacture of sulphur and —— from sulphites. (P) Harnist .. B334
N-Sulphato-alkyl compounds; Manufacture of ——. (P) Green and others .. B289*
Sulphides; Apparatus for manufacture of alkali and alkaline-earth —— from sulphates. (P) Laury .. B869
Decomposing —— for recovery of metals. (P) Sem, and Norske Aktieselskab for Elektrochem. Ind. .. B138*
Electrolytic production of ——. (P) Rodrian, and Rodrian Electro-Metallurgical Co. .. B746
Manufacture of alkali —— from alkali sulphates. (P) Rhenania Ver. Chem. Fabr. A.-G., Zweigniederlassung Mannheim B421, B421
Manufacture of alkali —— from thiosulphates. (P) Koppers Co. B173
Manufacture of alkaline-earth ——. (P) Löwenstein .. B95
Manufacture of metal ——. (P) Howard and Alvord .. B335*
Manufacture of —— from sulphates. (P) Besemfelder .. B746
Precipitating insoluble —— from soluble sulpho salts. (P) Wilson and Shirk .. B746
Use of mercury electrode for determination of ——. Kolthoff and Verzyl .. B116
Sulphite liquor; Considerations affecting choice of sulphur or pyrites as raw material for —— for paper pulp manufacture. Sieber .. B330
liquors; Cooling gases containing sulphur dioxide for use in production of ——. (P) Koholyt A.-G. .. B980
pulp. *See under* Pulp.
Sulphite-cellulose waste lye; Borneol from ——. Holmberg and Sunesson .. B447
waste lye; Clarification of ——. (P) Zellstoff-fabr. Waldhof, and Lührs .. B251
waste lye; Combustion of combustible substances present in ——. (P) Eisenbeiss, and Papierfabr. Perlen .. B13
waste lye; Concentration of ——. Paulson .. B706
waste lye; Converting —— into a dry product. (P) Eisenbeiss .. B805
waste lye; Fermentation of —— by bacteria. Pringsheim .. B272
waste lye; Kinetics of alcoholic fermentation of ——. Noll .. B686
waste lye; Lactone of ——. Hintikka .. B169
waste lye; Manufacture of a building material using ——. (P) Strehlenert .. B831
waste lye; Manufacture of tanning substances from ——. (P) Hein und Co., and Melamid .. B684
waste lye; Preliminary treatment of —— before evaporation. (P) Chem. Fabr. Griesheim-Elektron .. B563
waste lye; Treating —— and obtaining a tanning material therefrom. (P) Dickerson, and Industrial Waste Products Corp. .. B707
Sulphites; Determination of thiosulphate in presence of ——. Kurtenacker .. B631
and iodates; Theory of Landolt reaction between ——. Thiel and Meyer .. B867
in raw meat; Rate of disappearance of ——. Campbell 297T, B960
Sulphochromic oxidation and β-oxidation. Polonovski .. B277
Sulpho-compounds; Production of —— from mineral oils. (P) Johansen, and Atlantic Refining Co. .. B124
Sulpho-halogenamides; Preparation of alkali salts of aromatic ——. (P) Chem. Fabr. von Heyden .. B811
Sulphonated oils. *See under* Oils, Fatty.
Sulphonates; Manufacture of alkali —— for use as detergents. (P) Divine .. B565
Sulphonation of benzene. Harvey and Stegeman .. B781
of fatty substances of animal origin. (P) Guilleulnot .. B140
of hydrocarbons in basic or neutral medium. Battegay and Brandt .. B126
Sulphonefluorescein. *See under* Phthalein dyestuffs.
Sulphonic acids; Manufacture of aromatic ——:
(P) Canon, and Barrett Co. .. B862
(P) Rheinische Kampfer Fabrik .. B937
Manufacture of fat-splitting ——. (P) Divine .. B681
Production of water-soluble —— from petroleum oils. (P) Humphreys and others .. B47

PAGE

Sulphonyl chlorides; Manufacture of aromatic ——. (P) Chem. Fabr. Weiler-ter Meer .. B591
Sulphovinic acid. *See* Ethylsulphuric acid.
Sulphur; Action of —— on alkali soils. Kalushski and Ssolnljewa .. B801
Action of —— on hydrocarbons. Bielenberg .. B777
Apparatus for burning ——. (P) Davis, and Texas Gulf Sulphur Co. .. B174*
Biochemical oxidation of —— and its significance in agriculture. Joffe .. B722
burners. Moritz .. B785
Burning ——. (P) Kobbé, and Texas Gulf Sulphur Co. B829,* B909*
in coal and coke; Determination of total ——. Foerster and Probst .. B43
colloidal; Manufacture of ——:
(P) Plauson's Forschungsinst. .. B712
(P) Vogel .. B174, B257
colloidal; Properties of ——. Rossi .. B378
and its compounds; Catalytic properties of ——. Autoxidation and anti-oxygenising action. Moureu and others .. B1028
Conditions of reaction of hydrogen with ——. Photochemical union. Norrish and Rideal .. B1012
Considerations affecting choice of pyrites or —— as raw material for sulphite liquor for paper pulp manufacture. Sieber .. B330
Contamination of hydrogen by sulphur, and test for very small quantities of ——. Prandtl .. B619
cycle in the soil. Biology of thiosulphate bacteria. Klein and Limberger .. B189
Determination of —— in lignite. Bauriedel .. B324
Determination of —— by means of a thermometric titration. Dean and Watts .. B495
Determination and separation of soluble carbonates, hydroxides, and salts of sulphur acids and of elementary ——. Järvinen B509
Determination of total —— in soils and silicate rocks. Shaw and MacIntire .. B66
Direct union of oxygen and ——. Norrish and Rideal .. B172
Effect of —— on the blast-furnace process. Joseph .. B945
Effects of —— on crops and soils. Adams .. B990
Equilibria between metal pairs and ——. Guertler and Schack B99
Extracting —— from ore. (P) Thornton .. B943
Extraction of —— from spent oxide. (P) Given, and Stevens Aylsworth Co. .. B124
Feeding —— to burners. (P) Kerr .. B56
Furnaces for burning ——. (P) Metallbank u. Metallurgische Ges. .. B868
in gas; Determination of —— by hydrogenation. Troup .. B897
Hydrogen roasting of pyritic ores with recovery of iron and ——. Conder .. B714
Influence of oxidation of —— on solubility of soil minerals. Stephenson and Powers .. B1021
in iron and steel; Use of amalgamated zinc in evolution method for determination of ——. Ashida .. B385
Manufacture of ——:
(P) Fogh .. B21
(P) Marx, and Union Sulphur Co. .. B633
(P) Sutherst, and Herbert and Herbert, Inc. .. B512
Manufacture of sulphates and —— from sulphites. (P) Harnist B334
Manufacture of —— from sulphides and sulphur dioxide. (P) Rhenania Ver. Chem. Fabr. A.-G., Zweigniederlassung Mannheim .. B943
Manufacture of sulphur dioxide and —— from calcium sulphate. (P) Akt.-Ges. für Anilin-Fabr. .. B711
Manufacture of uniformly finely divided ——. (P) Coffin, and Naugatuck Chemical Co. .. B712
Micro-determination of ——. Wintersteiner .. B851
Obtaining —— from a gas containing hydrogen sulphide. (P) Bayer und Co. .. B944*
oxidation in Oregon soils. Halversen and Bollen .. B345
-oxidising organisms; Production of ——. (P) Lipman .. B685
preparations; Manufacture of ——:
(P) Riedel A.-G. .. B95
(P) Wachtel .. B616
Production of medicinal preparations which generate sulphurous acid and colloidal ——. (P) Kaban Chem. Fabr. .. B153
Reaction of —— with alkali and alkaline-earth hydroxides in aqueous solutions. Tartar and Draves .. B377
Recovery of ammonium sulphide and —— from solutions. (P) Badische Anilin u. Soda Fabr. .. B264
Recovery of —— from gases. (P) Rambush .. B909*
Recovery and refining of ——. (P) Robinson .. B57*
Revivifying adsorbent charcoal containing ——. (P) Badische Anilin und Soda Fabr. .. B326
Separation of —— from coal-gas. (P) Badische Anilin- und Soda-Fabrik .. B819
as a supplementary fertiliser. Kalushski .. B800
-terpene emulsion for impregnating textiles. (P) Pratt .. B128
Value of —— in soil improvement and crop production. Lipman B394
vapour; Diffusion of —— in air at the ordinary temperature. Chavastelon .. B94
Volumetric determination of —— in iron and steel. Pinsl .. B177
for vulcanising; Production of ——. (P) Kaban Chem. Fabr. B25
Sulphur-acids; Determination and separation of soluble carbonates, hydroxides, and salts of —— and of elementary sulphur. Järvinen .. B509
Sulphur compounds; Action of petroleum-refining agents on pure organic —— dissolved in naphtha. Wood and others .. B1002
compounds of alkali or alkaline-earth metals; Production of ——. (P) Naef .. B511
compounds; Continuous removal of —— from gases. (P) Badische Anilin und Soda Fabrik .. B84, B778
compounds; Preparation of organic —— from primary aromatic amines. (P) Meister, Lucius, und Brüning .. B617
compounds; Removal of —— from gases free from ammonia. (P) Bayer und Co. .. B820

PAGE

Sulphur dioxide; Apparatus for recovery of —— in wood pulp manufacture. (P) Decker .. B170
Combustible cartridge for developing ——. (P) Boving .. B728
Cooling and absorbing system for ——. (P) Richter and others B11
Determination of —— in technical sulphuric acid. Ditz and Kanhäuser .. B630
Determination of very small quantities of —— in the air in the neighbourhood of factories. Pozzi-Escot .. B691
liquid; Manufacture of ——. (P) Rhenania Ver. Chem. Fabr. A.-G., Zweigniederlassung Mannheim, and Rüsberg .. B334
Manufacture of ——:
(P) Hollander, and Rohm & Haas Co. .. B870
(P) Rhenania Ver. Chem. Fabr. A.-G., Zweigniederlassung Mannheim .. B257
Manufacture of alkali thiosulphates, and removing —— from gases. (P) Chem. Fabr. Griesheim-Elektron .. B334
Manufacture of —— from alkaline-earth sulphates:
(P) Harnist .. B16
(P) Rhenania Ver. Chem. Fabr. A.-G., Zweigniederlassung Mannheim .. B511
Manufacture of —— from mixtures of sulphates and heavy metal sulphides. (P) Trautz .. B133
Manufacture of —— from sulphates of alkaline-earth metals, magnesium, or iron. (P) Rhenania Ver. Chem. Fabr., Zweigniederlassung Mannheim .. B711
Manufacture of sulphur and —— from calcium sulphate. (P) Akt.-Ges. für Anilin-Fabr. .. B711
Photochemical decomposition of gaseous ——. Hill .. B418
Preparation of a medicinal powder which when moist generates ——. (P) Feilheim .. B115
Production of hydraulic cement and —— from calcium sulphate. (P) Bayer und Co. .. B379
Production of medicinal preparations which generate colloidal sulphur and ——. (P) Kuban Chem. Fabr. .. B153
Purification of ——. (P) Andrews .. B908
Recovery of —— in manufacture of sulphite-cellulose. (P) Richter, and Brown Co. .. B13
Removing —— from fruit juices and other preserved liquids. (P) Spitalsky .. B1027
Separation of —— from gases containing it, with simultaneous production of alkali thiosulphates. (P) Chem. Fabr. Griesheim-Elektron .. B16
Separation of pure —— from gases containing it. (P) Freund, and Hell und Sthamer .. B943
in smelter gases; Decomposing ——. (P) Carson .. B340
in waste gases; Utilisation of —— for production of phosphates. (P) Spiegelmanufaktur Waldhof A.-G. .. B842
See also Sulphurous acid.

Sulphur dyestuffs; Improving dyeings obtained with ——. (P) Soc. of Chem. Ind. in Basle .. B171
of indigo tint; Manufacture of ——. (P) Soc. of Chem. Ind. in Basle .. B9, B247
Manufacture of blue ——. (P) Mauss, and Du Pont de Nemours and Co. .. B10
Manufacture of green —— dyeing in reducing baths. (P) Soc. Chim. Grande Paroisse .. B328
Manufacture of —— from indophenols derived from carbazole. (P) Lewcock and others .. B329
Manufacture of —— and of intermediate products. (P) Soc. of Chem. Ind. in Basle .. B976, B976
Printing fabrics with ——. Sunder .. B865

Sulphur-oxygen acids; Strength of acid function of ——. Kolthoff B333

Sulphur trioxide; Recovery of —— from fuming sulphuric acid. (P) Hill .. B632
Vapour pressures of fuming sulphuric acid, and their application to the problem of the absorption of ——. McDavid 57T, B291
See also Sulphuric anhydride.

Sulphuric acid; Anomaly in standardisation of ——. Patterson and Duckworth .. B116
Automatic regulation of supply of oxidising agents in manufacture of ——:
(P) A./S. Dansk Svovlsyre and Super Phosphat-Fabr., and Dansk A./S. Siemens Schuckert .. B597*
(P) Jensen .. B467
Centrifugal contact apparatus for manufacture of ——. (P) Freedenburg, and Bartlett Hayward Co. .. B671
Concentrating tower for ——. (P) Boynton and others .. B869
Concentration of ——. (P) Cowburn .. B746
concentration apparatus; Support for ——. (P) Bermutat .. B293
Condensing acid fumes evolved during concentration of ——:
(P) Calder and others .. B422*
(P) Chance and Hunt, Ltd., and others .. B15
Determination of arsenic in ——. Mayr .. B865
Determination of sulphur dioxide in technical ——. Ditz and Kanhäuser .. B630
Diluting ——. (P) Eyleson, and General Chemical Co. .. B1012
Fuming ——. *See* Oleum.
Manufacture of ——:
(P) Coolbaugh and others .. B1012
(P) Klencke and others .. B942
(P) Lamoreaux .. B597*, B597*
(P) Rudolf and Ryder .. B94
(P) Schmiedel and Klencke .. B1013*
(P) Sulfur A.-G., and Franck .. B419
Manufacture of —— free from arsenic, selenium, and iron. (P) Erzröst-Ges., and Schlossberg .. B293
Manufacture of pure ——:
(P) Krafft .. B868
(P) Verein für Chem. und Metall. Produktion B828, B1012
Manufacture of solutions containing ferric sulphate and ——. (P) Leaver and others .. B133
Means for controlling the manufacture of ——. (P) Logan .. B15
Microchemical detection of —— as silver sulphate. Rosenthaler B203

Sulphuric acid—*continued.*
Partial pressures of —— over concentrated aqueous solutions of the acid at high temperatures. Thomas and Ramsay .. B171
Plant for manufacture of ——. Moritz .. B785
Preparation of hydrochloric acid and —— from sulphuryl chloride. McKee and Salls .. B785
Recovery and concentration of —— in the explosives industry. Büsching .. B733
Recovery of —— from waste acid obtained in refining benzol (P) Laube und Menzen .. B16
Reversibility of reactions of formation of —— in the lead chamber process. Graire .. B1010
Second dissociation constant of ——. Kolthoff .. B333
Towers for use in manufacture of ——. (P) Fairlie .. B133
Use of sodium nitrate solution in manufacture of ——. Botto .. B629
used for destroying weeds; Neutralisation of —— in the soil. Brioux .. B722
used in refining oils; Recovery of —— and of the acid resin contained in it. (P) Benesch .. B366
Sulphuric anhydride; Manufacture of ——:
(P) Carey, and Atlas Powder Co. .. B133
(P) Chase and others .. B56
(P) Coolbaugh and others .. B1012
See also Sulphur trioxide.

Sulphurous acid; Bromometric determination of ——. Manchot and Oberhauser .. B252
Determination of —— in presence of dithionic and thiosulphuric acids. Mayr and Szentpaly-Peyfuss .. B171
Interaction of ferric salts and —— and its catalysis. Pinnow .. B54
Manufacture of —— from kieserite. (P) Spanier, and Heetfeld und Co. .. B943
Manufacture of lime and —— from calcium sulphate and sulphide. (P) Waeser .. B943
Reactions of nitrous acid with ——. Raschig .. B700
solutions for disinfecting; Highly concentrated stable ——. (P) Feilheim .. B804
Steel alloys having high resistance against attack of —— at high temperatures and pressures. (P) Krupp A.-G. .. B60
See also Sulphur dioxide.

Sulphuryl chloride; Hydrolysis of —— to sulphuric and hydrochloric acids. McKee and Salls .. B785
Principles of manufacture of —— from liquid sulphur dioxide. McKee and Salls .. B378
Thermal decomposition of ——. Hinshelwood and Prichard .. B93

Sumach; Analysis of ——:
Auerbach .. B25
Paessler and Sluyter .. B25

Sunflower seeds; Lipase in ——. Tractta-Mosca and Milletti .. B23

Sunlight; Effect of —— on pigs kept on restricted rations. Steenbock and others .. B1026

Superheaters for elastic fluids. (P) Kirke .. B737*

Superheating gases; Apparatus for ——. (P) Barnebey .. B855

Superphosphate, double ——; Analysis of ——. Larison .. B646
Influence of admixture of different grades of limestone on solubility of phosphoric oxide in ——. Hall and Vogel .. B882
process. (P) Meyers, and Armour Fertilizer Works .. B395
process; Double ——. (P) Meyers, and Armour Fertilizer Works .. B67
Production of enriched ——. Wolfkowitsch .. B530
Relative availability of phosphorus of raw rock phosphate and ——. Wolkoff .. B345

Supersaturation of gases in water and certain organic liquids. Metschl .. B815

Suprarenin. *See* Adrenaline.

Surface tension and coagulation. Amar .. B229
tension of oil-in-water and water-in-oil emulsions. Joshi .. B839

Sus cristatus; Fat from ——. Rae .. B264

Suspended matter; Separating —— from fluids. (P) Hele-Shaw .. B230

Suspensions; Means for producing disruptive forces in films of —— confined between closely adjacent surfaces rotating relatively to one another at high speeds. (P) Burt, Boulton and Haywood, and China .. B929, B929
Protective effect on —— of electrolytes added in too small quantities to cause flocculation. Boutaric and Peneau .. B697
and similar disperse systems; Continuous production of ——. (P) Agthe .. B239

Sweet potato flour; Value of —— in bread making. Gore .. B70

Sweetening foodstuffs with sweetening agents such as saccharin and crystallose. Neumann .. B571

Swelling; Sensitive method for measurement of ——. Von Hahn .. B998

Swine fever serum; Preparation of an active ——. (P) Elektro-Osmose A.-G. .. B616

Sylvinite; Composition of —— and of the potassium chloride produced therefrom. Horst .. B940

Synthol; Production of —— by synthesis from carbon monoxide and hydrogen. Fischer and Tropsch .. B1001

Syrup; Production of —— from maize stalks .. B686

T

Taka-diastase; Cellase of ——. Neuberg and Rosenthal .. B109
Fat-hydrolysing enzyme of ——. Ogawa .. B986
Hexosemonophosphatase of ——. Noguchi .. B109
Hydrolysis of lecithin by ——. Akamatsu .. B28
Occurrence of glycerophosphatase in ——. Akamatsu .. B28
Presence of inulase in ——. Takahashi .. B227

PAGE

Taka-invertase; Behaviour of α- and β-methylglucosides towards ——. Hattori B761
Takalactase. Neuberg and Rosenthal B348
Takarennin. Hatano B992
Tan, spent: Treatment of —— for production of fertilisers etc. (P) Marris, and Walker and Sons B346
Utilisation of spent —— in extract factories. Pawlowitsch .. B841
Tannage; Is the sulphur —— a true tannage? Thuau B643
Tanneries; Purifying waste water of ——. (P) Benolt B886
Tannery lime liquors; Bacteria in ——. Collett B25
limeyard control. Reaction between lime and red arsenic. Atkin and others B880
soak waters; Bacteria in ——. Wilson and Vollmar B481
Tannic acid; Tannage with ——. Thomas and Kelby B799

Tannin analysis; Cleaning Berkefeld filter candles used in ——. Kubelka B225
analysis; Effect of adjusting the p_H value in ——. Knowles .. B25
analysis; Effect of sodium sulphoricinate on official method of ——. Thuau and Favre B684
analysis; Official method of —— and filtration of tanning material infusions in tropical countries. Pilgrim B105
analysis; Report of German Leather Research Institute on qualitative ——. Lauffmann B642
Apparently specific test for ——. Ware B1055
Application of gold-beater's skin test to identification and classification of drugs containing ——. Jordan and Ware .. B805
Classificatory tests for drugs containing ——. Stiasny's test for phlobotannins. Ware B805
Determination of —— in plant tissue. Menaul B226
fixation; Difference in kind or degree of ——. Thomas and Kelly B188
Gelatin-salt test for ——. Nierenstein B25
Hamameli ——. Freudenberg and Blümmel B1020
Influence of neutral salts on fixation of —— by hide substance. Thomas and Kelly B142
of oakwood; Preparation and purification of ——. Feist and Bestehorn B880
-protein compounds; Preparation of ——. (P) Bayer und Co. B402
in quebracho wood; Effect of sulphiting on ——. Moeller .. B343
of quebracho wood; Presence of resorcinol nucleus in ——. Nierenstein B267
solutions; Influence of acidifying —— on concordance of absorption coefficients of different hide powders. Hugonin .. B267
solutions; Peptisation in ——. Moeller B304
and vegetable glue composition. (P) Birk B529

Tanning agents; Manufacture of ——. (P) Meister, Lucius, u. Brüning B800
agents; Manufacture of —— from aromatic hydroxy-compounds. (P) Meister, Lucius, u. Brüning B800
agents; Manufacture of easily soluble —— from phenols and aldehydes. (P) Chem. Fabr. Weiler-ter Meer B482
animal skins:
(P) Bayer und Co. B800
(P) Hassler B919
(P) Meister, Lucius, u. Brüning B919
chrome-; First bath in two-bath ——. Meunier and Chambard B684
chrome-; Review of modern theories of ——. Precipitation figure as a means of control. Burton B880
chrome-; Temperature of gelatinisation of leather and its application to study of single-bath ——. Schiaparelli and Careggio B142
extracts; Absorption spectra of —— in the ultra-violet region. De la Bruère B267
extracts; Effect of certain de-leading agents upon hydrolysis in determination of reducing sugars in ——. Clarke and Frey B528
extracts; Effect of definite hydrogen-ion concentration upon analysis of ——. Rogers B642
extracts; Manufacture of ——. (P) Moeller B482
extracts; Manufacture of oak-wood and chestnut-wood ——. Pawlowitsch B65, B105
extracts; Reactions of pure quebracho, sulphited quebracho, and mixtures of quebracho and sulphite-cellulose ——. .. B643
extracts; Reducing action of artificial tannins in determination of sugar in —— with Fehling's solution. Lauffmann .. B344
extracts; Ultra-violet absorption spectra of ——. De la Bruère .. B25
and filling compounds; Manufacture of ——. (P) Elektrochem. Werke Ges., and others B482
hides and skins previously treated with a salt solution. (P) Arth B482
liquors; Acidity of vegetable ——. Kern and Koenig B435
liquors, chrome-; Analysis of single-bath ——. Baldracco .. B267
liquors; Determination of acid content of ——. Kubelka and Wagner B481
liquors; Use of quinhydrone electrode for measuring hydrogen-ion concentration of ——. Hugonin B1020
material; Badan root, a Siberian ——. Smetkin B758
material; Obtaining a —— from sulphite-cellulose waste lye. (P) Dickerson, and Industrial Waste Products Corp. .. B707
material; Tara pods as ——. Helm and Cerecbet B841
materials; Analysis of ——. Baldracco B25
materials; Extractor for extraction of —— for analysis. Sheard B528
materials; Fractional salting-out of solutions of ——. Stiasny and Salomon B105
materials; Manufacture of ——:
(P) Badische Anilin und Soda Fabr. B393, B644*
(P) Chem. Fabr. Weiler-ter Meer B919
(P) Hutchings, Ltd., and Morrison B841
(P) Melamid B841
materials; Official methods of Society of Leather Trades Chemists for sampling and analysis of —— B435

Tanning—*continued.*
Preparation of hides for ——. (P) Dufour-Lepetit A.-G., and Ganser B644
preparations easily soluble in water. (P) Badische Anilin und Soda Fabrik B919
problems; Chrome —— in the light of Werner's theory. Gustavson B65
process:
(P) Elektrochem. Werke Ges., and others B482
(P) Hassler and Chemical Foundation, Inc. B800
(P) Hutchings, Ltd., and Morrison B841
(P) Melamid B841
process and manufacture of tanning substances from sulphite-cellulose waste liquor. (P) Hein and Co., and Melamid .. B684
process; Nature of the ——:
Powarnin B643
Powarnin and Tichomirow B643
process; Nature of the ——. Temperature at which hide and leather shrink. Powarnin and Aggeew B759
with quinones:
Moeller B142
Thomas and Kelly B918
Rate of ——. Bennett B881
Reactions of gelatin in ——. Moeller B304
solutions; Determination of insoluble matter by centrifuging, and standardisation of acidity of ——. Hugonin and Chambard B187
solutions; Rocker for agitating washing, liming, or ——. (P) Baxter B759*
solutions; Use of Berkefeld filter candle in filtering ——. Kubelka and Bělavski B528
with tannic acid. Thomas and Kelly B799
Theory of vegetable ——. Dehydration of gelatin sol by tannic acid, crystalline tannins, and simpler phenols. De Jong B225
Tannins; Attempt to extend Mitchell's colorimetric method to determination of pyrocatechol ——. Price B759
of Australian acacias. Petrie B935
and their derivatives; Osmium tetroxide as reagent for determination of ——. Mitchell B481
Gold-beater's skin test for ——. Price B187
Isolation of —— and of other soluble constituents from wood and similar material containing cellulose. (P) Zellstoff-fabr. Waldhof, and others B393
New results obtained in extraction of ——. Depasse B918
Nitrosomethylurethane as a reagent for pyrocatechol ——:
Leather Research Institute, Waalwijk, Holland .. B918
Vogel and Schüller B105
Osmium tetroxide as reagent for gold-beater's skin test for ——. Price B684
and similar substances. Stereoisomeric catechins. Freudenberg and Purrmann B642
Solubility of —— and their extraction from vegetable matter. Picard B1020
Synthetic ——, their absorption spectra in the ultra-violet, colour, and precipitation reactions. De la Bruère .. B955
Tansy; Determination of santonin in ——. Schaap B349
Tantalum; Determination of niobium and ——. Wenzel .. B620
-platinum alloys. (P) Duparc B388
Purification of metallic ——. (P) Siemens und Halske .. B876
Tantalum compounds containing oxygen; Preparation of ——. (P) Cooper, and Kemet Laboratories Co. B942
Tar; Apparatus for automatic determination of water in ——. Schaefer B973
Apparatus for separating —— from gases. (P) Bradley, and Research Corp. B9
and bitumen or the like; Preparation of mixtures of ——. (P) Butler and Popham B900
blast-furnace; Recovery of benzol wash-oil from ——. Whittaker B6
Cancer-producing factor in ——. Kennaway B822
carburetted water-gas; Indene and styrene as constituents of ——. Brown and Howard B48
Continuous distillation of ——. (P) Hahndrof und Wuchenpfennig B411
Dehydration and distillation of ——. (P) Thermal Industrial and Chemical (T.I.C.) Research Co., and Rider B934
Distillation of ——:
(P) Cabrier B589
(P) Duplan B48
(P) Liebmann B461
(P) Thermal Industrial and Chemical (T.I.C.) Research Co., and Morgan B82
distillation; Apparatus for ——. (P) Meyer B900
distillation by means of a bath of molten metal; Removal of matter from the surface of a liquid, particularly in apparatus for ——. (P) Thermal Industrial and Chemical (T.I.C.) Research Co., and Duckham B543
Extracting gas and —— from bitumen-containing materials. (P) Klötzer B408
extractor and scrubber. (P) Galusha B549
fractions; Recovery of —— directly from gaseous products of distillation. (P) Chur B549
and the like; Dehydrating ——. (P) Wikner, and Newcastle-upon-Tyne and Gateshead Gas Co. B599*
low-temperature; Application of Zelinsky's method of catalytic dehydrogenation to detection of decahydronaphthalenes in ——. Kaffer B900
low-temperature; Aromatic hydrocarbons of ——. Kruber B666
low-temperature coal; Solid constituents of ——. Marcusson and Picard B287
low-temperature; Composition of ——. Schütz and others .. B367

Tar—*continued.*
Low-temperature —— and its content of benzene, phenol, and acetone. Schütz and others B460
low-temperature; Direct utilisation of —— by thermal treatment. Fischer and others B287
low-temperature; Influence of construction of revolving retorts on composition of —— from coal. Hoffmann .. B897
low-temperature; Influence of temperature on yield of —— from gas coal. Broche B161
low-temperature; Manufacture of semi-coke, gas, and ——. (P) Rude B365, B588
low-temperature; Purification of phenols from ——. (P) Zeche Stinnes B740
low-temperature; Reaction of ——. Schulz and Prunet .. B589
low-temperature; Refining ——. (P) Hütz B503
low-temperature; Separation of aliphatic and aromatic constituents of ——. (P) Gelsenkirchener Bergwerks-A.-G., Abt. Schalke, and Schütz B780
low-temperature; Thermal reduction of phenols of ——. Fischer and others B287
-macadam and the like; Apparatus for manufacture of ——. (P) Temperley B219*
Manufacture of —— from bituminous fuel, suitable for use in briquetting. (P) Carbozit A.-G. B366
Manufacture of emulsions or solutions of ——. (P) Low .. B900
oils containing resins; Apparatus for treating ——. (P) Laube and Menzen B288
oils; Determination of unsaturated olefinic hydrocarbons, aromatic hydrocarbons, and saturated hydrocarbons in ——. Danaila and others B857
oils; Extraction of phenols from low-temperature ——. (P) Ges. für Teerverwertung, and others B589
oils; Low-temperature ——. Weissgerber B666
oils from low-temperature carbonisation of S. African coals. Lategan B411
oils; Low-temperature —— as motor fuels. Häusser and Ellerhusch B776
oils; Oxygen absorption of lignite —— in presence of alkali hydroxide. Von Walther and Bielenberg B775
oils; Refining low-temperature ——. (P) Gelsenkirchener Bergwerks-A.-G., Abtell. Schalke, and Schütz B367
oils; Removing olefines etc. from ——. (P) Bayard, and Du Pont de Nemours and Co. B48
peat-; Phenols present in ——. Börnstein and Kartzow .. B627
producer-gas-; Dehydration of ——. (P) Chem. Fabr. Kalk, and others B287
Production of a compact material resistant to the influence of weather from ——. (P) Heuffel B328
Retort for gasifying ——. (P) Sharp and Bassett B625
Slow gelation in pressure-still ——. Sheppard and Eberlin .. B777
and tar oils; Removing acid constituents from ——. (P) Fischer B287
Treatment of ——. (P) Vivian B327
Treatment of —— with acids and the like. (P) Dott and others B589
Treatment of —— in gas-works, especially for preparation of benzol wash-oil. Grahlke B623
Vapour pressures of some substance found in coal ——. Mortimer and Murphy B48
Water content of ——. Pfeiffer B823
wood-; Impregnating fabrics etc. with solutions of ——. (P) Schwarz B592

ara pods and their value as tanning material. Hein and Cercelet B841

ars; Blowing (oxidation) of ——. Marcusson and Picard .. B624
produced by low-temperature carbonisation; Comparative study of .one coal ——. Edwards .. 143T, 149T, B934
Relation betw. n low-temperature and coke-oven —— and petroleum. Schütz B461
road-; Consistency of ——. Broome 25T, B166
and tar fractions; Cancer-producing ——. Kennaway .. B504

arnishing; Relation between corrosion and ——. Evans .. B913

artar, cream of; Colorimetric determination of lead in ——. Andrew B352
cream of; Preparation of ——. (P) Utz B354

artaric acid; Detection and determination of ——:
François and Lormand.. .. .. B152
Kling and Lassieur B696
Determination of ——. Strebinger and Wolfram B74
Determination of —— in tartrates. François and Lormand.. B964
Differentiating citric acid and ——. Stevens B277
Oxidation of —— by potassium permanganate and hydrogen peroxide. Melgen and Schnerb B574
Preparation of ——. (P) Utz B384
Preparation of —— from saccharic acid. (P) Diamalt A.-G. B450

artrates; Studies of sparingly soluble ——, readily obtained from hot solutions of reacting substances. Chatterjee and Dhar B964

asajo; Chemical and biological observations on ——. Bickel and Collazo B396

aurine; Substitution of —— for cystine in the diet of mice. Mitchell B611

elephone wires; Corrosion of copper —— by dust of potash fertilisers. Haehnel B636

llurium-copper-aluminium alloys; Properties and structure of ——. Sisco and Whitmore.. .. .. B791
Distillation method of separating selenium from ——. Lenher and Smith B853
Volumetric determination of —— and its gravimetric separation from selenium. Moser and Miksch B852

llurium derivatives of aliphatic β-diketones; Bactericidal action of ——. Morgan and others B351

llurium-β-diketones; Bactericidal action of ——. Morgan and others 304T, B923

Tetranitroaniline; Solubility of —— in organic solvents. Desvergnes B656
βγ-3.3'.5.5'-Tetranitrodi-*p*-tolylaminobutane; Action of sodium hydroxide on ——. Morgan and Hickinbottom .. 309T
Action of sulphuric acid on *meso*- and *dl* ——. Morgan and Hickinbottom 309T
Tetranitromethane; Action of sodium sulphites on ——. Muraour B451
Tetrathionate; Determination of —— by means of sulphite. Kurtenacker B556
Tetrazole; Preparation of ——. (P) Weil B811
Tetrodotoxin. *See* Fugutoxin.
Tetryl. *See* 2.4.6-Trinitrophenylmethylnitramine.
Textile materials; Apparatus for continuous drying of —— in the loose state. (P) Brandwood and others B977*
materials; Apparatus for continuous feed of —— to treatment apparatus. (P) Brandwood and others B594*
materials; Apparatus for dyeing, bleaching, scouring, mercerising, and other treatment of ——. (P) Brandwood and others B555*
materials; Conditioning of ——. (P) Brandwood B977*
materials; Fulling ——. (P) Meister, Lucius, u. Brüning B90
materials and the like; Impregnating or coating —— as a protection against rot. (P) Murmann B831
materials; Preservation of identification marks on —— during bleaching and printing. Bimler B331
materials; Thermodynamics of water absorption by ——. Shorter B628
materials; Washing, bleaching, or dyeing ——. (P) Dunnachie B53
products; Manufacture of artificial ——. (P) Dreyfus .. B213
Textiles; Action of catalysts with non-drying oils used for treating ——. Gill B183
Preparation for removing starch etc. from ——. (P) International Takamine Ferment Co. B112
Sulphur-terpene emulsion for impregnating ——. (P) Pratt B128
Thallium-cadmium alloys; Hardness of ——. Di Capua .. B99
Electro-analytical determination of —— as thallic oxide. Dieterle B79
-lead alloys; Hardness of ——. Di Capua B99
Thallium compounds; Use of —— for eradicating vermin. (P) Bayer and Co. B804
Thenardite; Preparation of ——. (P) Kali-Forschungs-Anstalt B256, B829
Theobromine in cacao; Determination of ——. Cappelli .. B885
Distribution of —— during the fermentation of cacao. Knapp and Wadsworth 124T, B960
Production of large crystals of ——. (P) Mayen and Merck B617
Therapeutic compounds; Manufacture of ——. (P) Engels, and Merck and Co. B492
products from peat. (P) Tilton and Timms B692
Thermal conductivity method for analysis of gases. Palmer and Weaver B620
conductivity of refractories; Determination of ——. Hersey and Butzler B468
manifestations; Industrial utilisation of terrestrial ——. Ginori B2
Thermo-elements; Temperature measurements with ——. Würschmidt B733

PAGE

Thermometers; Repair of leaky calorimetric resistance ——. Davis and Cooper .. B656
Vapour pressure ——. (P) Apthorpe, and Cambridge and Paul Instrument Co. .. B496*
Thermometric lag; Effect of —— in Engler distillations. Ormandy and Craven .. B701
Thermoplastic compositions. (P) Columbia Graphophone Manuf. Co. .. B434*
Thermo-regulator; Modified ——. Hume .. 250T, B773
Thiazole dyestuffs of Doebner Violet type; Preparation of —— from poison gases through 2-aminothiazoles as intermediates. Bogert and Chertcoff .. B1006
Thickeners; Slime-pulp ——. (P) Allen .. B42
Thioamides; Preparation of ——. (P) Kindler .. B616
Thiocarbanilide and its derivatives; Determination of ——. Callan and Strafford .. 6T
derivatives for use as vulcanisation accelerators. (P) Bedford and others .. B105*
Preparation of ——. (P) Bedford and others .. B233
Thiocol. See Potassium guaiacolsulphonate.
Thio-compounds; Preparation of dry ——. (P) Badische Anilin u. Soda Fabr. .. B402
Thiocyanates; Bromometric determination of ——. Kurtenacker and Kubina .. B866
Detection and determination of —— in presence of ferrocyanides. Perciabosco .. B253
Thiocyanogen; Production of free —— by electrolysis of alkali thiocyanates. Kerstein and Hoffmann .. B378
Thiodiglycol; Removal of odour of ——. (P) Meister, Lucius, und Brüning .. B35
Thiodiphenylamine; Dyestuffs derived from ——. Dutt .. B462
Thioindigo dyestuffs. See under Indigoid dyestuffs.
Thioisocyanines. See under Quinoline dyestuffs.
Thionylalizarin. Green .. B824
Thiosinamine; Iodometric determination of —— and its applications. Morvillez and Meesemaecker .. B152
Thiosulphate bacteria; Biology of ——. Klein and Limberger B189
Thiosulphates. Foerster and Mommsen .. B253
Determination of —— in presence of sulphite. Kurtenacker B631
Manufacture of alkali ——. (P) Sutherst, and Herbert and Herbert, Inc. .. B511
Manufacture of alkali —— and removing sulphur dioxide from gases. (P) Chem. Fabr. Griesheim-Elektron .. B334
Separation of sulphur dioxide from gases containing it, with simultaneous production of alkali ——. (P) Chem. Fabr. Griesheim-Elektron .. B16
Use of mercury electrode for determination of ——. Kolthoff and Verzyl .. B116
Thiosulphuric acid; Determination of —— in presence of dithionic and sulphurous acids. Mayr and Szentpaly-Peyfuss .. B171
Existence of free —— in presence of fuming hydrochloric acid, and preparation of alcoholic solutions of thiosulphuric acid. Gil and Beato .. B130
Thio-p-toluidine, its constitution and some of its derivatives. Bogert and Mandelbaum .. B126
Thiouram disulphides, Determination of ——. Callan and Strafford .. 8T
Thiourea or its derivatives and formaldehyde; Manufacture of resinous condensation products from ——. (P) Pollak B720, B953, B987
Thioureas; Preparation of ——. (P) O'Brien, and Goodyear Tire and Rubber Co. .. B353
Preparation of aromatic ——. (P) Chem. Fabr. Schering B448
Thoria crucibles; Manufacture of ——. (P) Richardson and others .. B1013
See also Thorium oxide
Thorium; Analytical methods for ——. Moore and others .. B620*
Electrodeposition of —— on tungsten. (P) Marden and others .. B476
Thorium-X; Action of —— on maturation of eggs, germination of seeds, and growth of plants. Averseng and others B530
Thorium dioxide; Reduction of ——. Ruff and Brintzinger B55
Thorium oxide; Catalytic effects of cerium oxide and —— and their bearing on the theory of the Welsbach mantle. Swan .. B458
See also Thoria
Threads of artificial filaments; Treatment of —— with lubricants. (P) British Cellulose and Chemical Manuf. Co., and others B554*
artificial; Gutter for treating ——. (P) Bemberg A.-G. B251
artificial; Manufacture of ——. (P) Levy .. B706
artificial; Manufacture of —— from viscose:
(P) Kämpf .. B250
(P) Müller .. B415
(P) Pert .. B464
artificial; Winding and sizing —— in a single operation. (P) Dreyfus .. B213*
effect-; Production of —— with animal fibres. (P) Cassella und Co. .. B709*
and the like; Manufacture of —— from viscose. (P) Courtaulds, Ltd., and Cross .. B706
Manufacture of —— from cellulose derivatives. (P) Dreyfus B706
Manufacture of glossy and hollow artificial ——. (P) Alsa Soc. Anon. .. B706
Preparation of —— from concentrated solutions of viscose. (P) Linkmeyer .. B411
Thujone; Probable presence of —— in essential oil of *Artemisia herba alba*. Alinari .. B536

PAGE

Thyme oil. See under Oils, Essential.
Thymol; Determination of carvacrol and —— in Spanish thyme oil. Sage and Dalton .. B1029
Preparation of ——:
(P) Badische Anilin u. Soda Fabr. .. B402
(P) Howards and Sons, and Blagden .. B577
Thymus capitatus; Oil of Sicilian —— as a source of carvacrol. Palazzo and Lutri .. B536
Tile; Strength, absorption, and freezing resistance of hollow building ——. Foster .. B381
Tiles and the like; Manufacture of ——. (P) Vaughan .. B58
Timber and the like; Preserving —— from attack by animal and vegetable pests. (P) Berkeley and Stenhouse .. B945
roofs; Treatment of death-watch beetle in ——. Maxwell-Lefroy .. B335
Tin; Activities of zinc, cadmium, lead, bismuth, and —— in their binary liquid mixtures. Taylor .. B137
baths; Electrochemistry of acid, particularly hydrofluosilicic acid ——. Halla .. B636
bullion; Electrolytic refining of ——. (P) American Smelting and Refining Co. .. B794*
in canned foods; Volumetric determination of ——. Willey 70T, B273
Catalytic activity of —— in reduction of nitro compounds. Brown and Henke .. B48
-copper system; Equilibrium diagram of ——. Isihara .. B298
Crystal structure of white ——. Van Arkel .. B521
Detection of —— by a spot test. Tananaeff .. B619
Determination of —— in copper-tin alloys. Etheridge .. B750
Determination of —— in presence of cobalt and nickel. Auger and Odinot .. B318
Diffusion and solution of —— in copper. Bauer and Piwowarsky .. B59
Effect of —— on 60:40 brass. Hauser .. B426
Electrolytic ——. Mantell .. B472
Electrolytic deposition of ——. (P) Linville, and American Smelting and Refining Co. .. B429
Electrolytic refining of ——:
(P) Alexander, and American Smelting and Refining Co. .. B429
Stack .. B521
(P) Stack, and American Smelting and Refining Co. .. B429
Extraction of —— from ores. (P) American Smelting and Refining Co. .. B602*
Hardness of alloys of cadmium and bismuth with ——. Di Capua .. B426
-iron alloy; Process of forming ——. (P) Alexander, and American Smelting and Refining Co. .. B429
-lead alloys; Determination of lead in ——. Kraus .. B473
-lead alloys; Hardness of ——. Di Capua and Arnone .. B560
Manufacture of ——. (P) American Smelting and Refining Co. .. B794*
Metallurgy of ——. (P) Fink, and Guggenheim Bros. .. B876
ores containing sulphides; Electric smelting of —— without previous roasting. Recker .. B136
ores; Reduction of ——. (P) Cobb Electro Reduction Corp. B950
Passive ——. Steinherz .. B791
-plate; Formation of tin hydride from rusty ——. Vaubel .. B560
-plate; Furnaces for heating ——. (P) Hughes and others .. B986*
-plating metals, especially aluminium and its alloys. (P) Passalacqua .. B600
Recovery of —— from scrap. (P) Kissock .. B752
Recovery of —— from slags and other materials. (P) Alexander, and American Smelting and Refining Co. .. B429
Refining ——:
(P) Bonnard .. B61*
(P) Goldschmidt A.-G., and others .. B339
-refining electrolytes; Addition agents in ——. Kern and Capillon .. B521
Separation of arsenic and —— in presence or absence of antimony. (P) Harris .. B522
sinter; Production of ——. (P) Alexander, and American Smelting and Refining Co. .. B429
Volumetric determination of ——. Druce .. B540
zinc-copper alloys. Tammann and Hansen .. B871
Tin chloride; Manufacture of anhydrous ——. (P) Buss A.-G. B632
Tin dioxide; Process of decomposing, dissolving, or rendering soluble ——. (P) Rankin and Sloss .. B16
Tin hydride; Formation of —— from rusty tin-plate. Vaubel .. B560
Tin sulphides and thio-salts; Electrolytic preparation of ——. Tocco and Jacob .. B255
Tissues; Test-tube reactions for damage and death of ——. Rostock B970
Titania; Influence of —— on properties of glass. Sheen and Turner .. B909
Titanic acid; Preparation of —— from titanium-iron compounds. (P) Bayer und Co. .. B788
Production of ——. (P) Weizmann and Blumenfeld .. B422*
Solubility of —— in alkalis and in alkali carbonates. Auger .. B93
Titanic oxide concentrate; Manufacture of ——. (P) Doremus, and Titanium Pigment Co. .. B747*
Production of —— from titaniferous iron ores. (P) Chem. Werke vorm. Auerges., and others .. B511
Titaniferous material; Treatment of ——. (P) Doremus, and Titanium Pigment Co. .. B557
Titanium in alloy steels. Vogel .. 367T
and aluminium in solution in sulphuric acid; Separation of ——. Kayser .. B814
Analytical methods for ——. Moore and others .. B620*

Titanium—*continued.*
Comparison of deoxidation effects of silicon and —— on properties of rail steel. Burgess and Quick B256
Determination of —— by reduction with zinc and titration with permanganate. Lundell and Knowles B36
Effect of —— on plant growth. Blauck and Alten B990
in grey cast iron. Piwowarsky B59
Influence of addition of —— to crude cast iron on its metallurgical behaviour during temper processes. Piwowarsky B677
ores; Extraction of iron and of titanium compounds from ——. (P) Gardner and Taverner B100
steel. *See under* Steel.
Volumetric determination of ——. Morley and Wood .. B453
Titanium compounds; Preparation of ——. (P) Weizmann and Blumenfeld B216, B256
Titanium dioxide, antimony oxide, and lithopone pigments. Gardner B303
Reduction of ——. Ruff and Brintzinger B55
Titanium-nitrogen compounds; Treatment of ——. (P) Titau Co. A./S. B293
Titanium oxide; Manufacture of —— and its properties as a pigment. Binder B796
Titanium oxychloride; Crystalline ——. Auger B93
Titanium pigment, dry and paste; U.S. Government specification for —— B432
pigments; Manufacture of ——. (P) Bachman B566
Titanium sulphates; Hydrolysis of solutions of quadrivalent ——. Kayser B814
Titanox, antimony oxide, and lithopone pigments. Gardner .. B303
Titration curves; Construction of ——. Thiel B619
Tobacco; Chemical factors determining quality of ——. Graham and Carr B442
extract as mould preventive for rubber. Stevens B840
Improving the burning quality of ——. (P) Falkenthal .. B812
Removing nicotine from ——. (P) Sartig B850
Töpler pump; Automatic ——. Porter B657
o-Tolidine benzenemonosulphonate. Keyworth 342T
Tolidine salts of 2.7- and 2.6-naphthalenedisulphonic acids. Forster and Keyworth 167T
salts of *a*- and *β*-naphthalenesulphonic acids. Forster and Keyworth 300T
Tolite. *See* Trinitrotoluene.
Toluidines; Benzenemonosulphonates of the ——. Keyworth .. 341T
Toluene; Action of nitrogen peroxide on ——. Schaarschmidt and Smolla B252
Photo-chlorination of ——. Book and Eggert B74
Vapour density of ——. Bürk B823
Toluene derivatives chlorinated in the side chain; Preparation of ——. (P) Walt B583
p-Toluidine; Action of sulphur upon —— in presence of litharge. Bogert and Mandelbaum B126
Toluidine salts of *a*- and *β*-naphthalenesulphonic acids; The *o*-, *m*-, and *p*- ——. Forster and Keyworth 299T
Toluidines; The 2.6- and 2.7-naphthalenedisulphonates of *o*-, *m*-, and *p*- ——. Forster and Keyworth 166T
Tomatoes; Antiscorbutic value of fresh and canned English ——. Delf B726
Tooth stoppings; Preparation of ——. (P) Passow B448
Topochemical reactions. Esterification and mercerisation of cellulose. Herzog and Londberg B250
Torbanite; Investigations on Ermelo (Transvaal) ——. Williams B857
Toxins; Purification of ——. Michaelis and Davidsohn B399
Stable preparations from —— suitable for internal use. (P) Wintsch B612
Tragacanth and its mucilage. Evers and McLachlan B802
Transformer oils; Action of metals and combinations of metals on ——. Von der Heyden and Typke B364
oils; Action of soaps on ——. Von der Heyden and Typke B624
oils; Catalytic action of metals on ——. Stäger and Bohnenblust B896
oils; Centrifugal machine for treatment of ——. (P) Unger, and Industrial Products Co. B406
oils; Determination of sludge value of ——. Schwarz and Marcusson B586
oils; Effect of halogenated hydrocarbons on flash and fire points of ——. Weber and Wynne B915
oils; Effects of heating —— with metals in absence of air. Von der Heyden and Typke B739
oils; Heating —— with various salts. Von der Heyden and Typke B702
oils; Purifying or separating apparatus for ——. (P) Svensson and Norling B41
oils; Sludging test for ——. Nuttall B739
Transformers; Influence of grain size of sheet iron on electrical losses in ——. Daeves B988
Transparent bodies; Production of —— from opaque substances, especially oxides. (P) Patent Treuhand Ges. für Elektrische Glühlampen, and General Electric Co. B598
Trass-lime mortar; Influence of method of preparing —— on its density and strength. Burchartz B517
as substitute for cement and as an ingredient of cement mortar. Burchartz B96
Travancore essential oils. Moudgill 187T, 163T, B965, B966
Treasurer's report. Evans 224T
Treating substances of different physical properties with one another; Apparatus for ——. (P) Pfisterer B899
Triaminotoluene; Preparation of ——. (P) Bielouss and others B505*

Triammonium monohydrogen sulphate; Production of solid ——. (P) Streicher B421
Triarylmethane dyestuffs:
Diphenylnaphthylmethane dyestuffs. (P) Kyrides, and National Aniline and Chemical Co. B902
Guinea Green B; Constitution of ——. Wales B861
Manufacture of ——:
(P) Bayer und Co. B862
(P) Kyrides, and National Aniline and Chemical Co. B211
a-Naphtholaurin; Formation of —— as a means of detecting small quantities of *a*-naphthol in *β*-naphthol. Driver 206T, B666
Night Blue; Colloid chemistry of ——. Von Hahn B368
Terephthal Green and Terephthal Brilliant Green; Synthesis of —— from cymene. Bogert and Nisson B1006
Tridymite and tridymite bricks. Rebuffat B514
Triethylacetamide; Preparation of ——. (P) Meister, Lucius, und Brüning B353
Triethyltriethylenetriamine hydrochloride; Preparation of ——. (P) Shepard and others B35
Trihexosan. Pictet and Salzmann B957
Trihydroxymethylanthraquinones:
Gardner and Adams B198
Graves and Adams B198
Preparation of ——. (P) Eder B849
Synthesis of emodin. Jacobson and Adams B574
Trimyristin, a glyceride present in milk. Pictet and Roéland B725
Trinitro-compounds; Action of sodium sulphite on ——. Muraour B451
Trinitro-*m*-cresolates and their explosion temperatures. Datta and others B201
2.4.6-Trinitro-1.3.-dihydroxybenzene: Production of normal lead salt of ——. (P) Thomas and others B618
2.4.6-Trinitrophenylethylnitramine; Production of ——. (P) Nolan and others B771
2.4.6-Trinitrophenylmethylnitramine; Production of ——. (P) Nolan and others B771
Reactions of ——. Davis and Allen B539
Solubility of —— in organic solvents. Desvergnes .. B656
Specific heats of picric acid, trinitrotoluene, and —— and their molecular complexes. Taylor and Rinkenbach B693
Trinitrotoluene; Purification of ——. Muraour B451
Specific heats of tetryl, picric acid, and —— and their molecular complexes. Taylor and Rinkenbach B693
2.4.6-Trinitrotoluene; Solubility of —— in organic solvents. Desvergnes B656
Triphenylmethane; Preparation of —— by catalytic action of aluminium chloride. Norris B277
Triphenylmethane dyestuffs:
Aurin: Substitution derivatives of ——. Spiers B286
Effect of sulphur on colour of ——. Holt and Reid B975
Gentian Violet; Behaviour of —— in bacteriological media in water analysis. Stearn and Stearn B613
Manufacture of ——:
(P) Bissell, and National Aniline and Chemical Co. B211
(P) Kyrides, and National Aniline and Chemical Co. B902
(P) Minevitch, and Dicks, David and Heller Co. B412
prepared from *o*-xylylaldehyde. (P) Craver, and Barrett Co. B10
Trisazo dyestuffs. *See under* Azo dyestuffs.
Troostite in steel; Pearlite, sorbite, and ——. Schrader B365
Tropacocaine; Preparation of —— from Javanese coca leaves. Hara and Sakamoto B653
Tropic acid: Preparation of alkamine esters of ——. (P) Chem. Werke Grenzach A.-G. B403
Trypanocidal compounds. (P) Adams and Johnson B890
drugs; New series of ——. Fourneau and others B312
Trypsin; Action of —— on various leathers. Thomas and Seymour-Jones B267
Hydrolysis of collagen by ——:
Marriott B188
Seymour-Jones B267
Tryptic digestion; Kinetics of ——. Northrop B885
Tryptophan content of caseinogen; Determination of ——. Onslow B349
in proteins; Determination of ——. Fürth and Dische .. B611
Tube mills. (P) Fasting B157
Tubercle bacillus; Process for producing a preparation from the ——. (P) Arima B115
bacilli; Production of a specifically active albumin from ——. (P) Toenissen B967
Tuberculosis; Preparation of a vaccine for ——. (P) Sata .. B76
Tubers; Simultaneous production of demineralised amylaceous substances and lower nitrogenous matter for food purposes from ——. (P) Boidin and Effront B922*
Tung oil. *See under* Oils, Fatty.
Tungsten in alloy steels. Vogel 366T
alloys; Manufacture of hard ——. (P) Patent Treuhand Ges. für Elektrische Glühlampen, and General Electric Co. B950
and its alloys; Preparation of metallic ——. Kaldenberg and Kahlenberg B913
alloys suitable for use in manufacture of lighting bodies or filaments; Malleable and ductile ——. (P) Fonda, and British Thomson-Houston Co. B985
Analytical methods for ——. Moore and others B620*
Attempt to electroplate —— on iron. Mann and Halvorsen B179

PAGE

Tungsten—*continued.*
crystals; Etching of hollow ——. Gross and others B522
Determination of —— in low-grade ores. Jünger B427
Determination of —— in tungsten-steel. Swoboda B425
Electrical process for obtaining ——. (P) Soc. Anon. des Brevets Berthet B523*
Electrodeposition of thorium on ——. (P) Marden and others B476
electrodes for arc lamps; Manufacture of ——. (P) Patent Treuhand Ges. für Elektrische Glühlampen, and General Electric Co. B822
Electrolytic separation of —— from solutions of its salts. Neumann and Richter B1017
Manufacture of ——. (P) Pacz, and General Electric Co. B914*
Single crystals of ——. Van Arkel B427
single crystals; Strength of —— and its variation with temperature. Boncher B792
Specific heat of —— at high temperatures. Smith and Bockstahler B984
-steel. *See under* Steel.
Treatment of ——. (P) N. V. Hollandsche Tungstendraadfabr. B679
wire; Production of ductile ——. (P) Patent Treuhand Ges. für Elektrische Glühlampen, and General Electric Co. B601
Tungsten carbide; Manufacture of alloys containing ——. (P) Patent Treuhand Ges. für Elektrische Glühlampen, and General Electric Co. B752
Tungsten compounds; Extraction of —— free from alumina and zinc. (P) Carus B421
halides; Use of iron alloys for production of ——. De Caril B466
Tungsten oxide; Production of ——. (P) Anjow, and Mitsubishi Kogyo Kabushiki Kaisha B466
Tungsten oxides and similar materials; Preparation of ——. (P) Fogler, and General Electric Co. B747*
Tungstic acid; Continuous process for manufacture of —— from wolframite. Gordon and Spring B631
Separation of molybdic acid and ——. Koppel B1030
Tungstic oxide; Action of high temperatures on ——. Matignon B93
Turbidimetric determination of precipitates. Hibbard B813
Turbidiscope. Horne and Rice B694
Turbidity method for analysis of binary mixtures of alcohols etc.; Volumetric ——. Bogin B970
Turbine oils; Determination of sludge value of ——. Schwarz and Marcusson B586
Turbines; Possibilities of mercury as a working substance in binary fluid ——. Kearton B237
Turf. *See under* Soils.
Turkey-red dyeing; Comparison of methods of ——. Sunder B415
Turmeric oil. *See under* Oils, Essential.
Turpentine; Action of —— on iron. Levy and Defries B103
Extracting rosin and —— from wood. (P) Sherwood and others B840
oil; Composition of —— from *P. larico Austriaca* and *P. larico* of Spain. Dupont and Barraud B720
oil; Detection and determination of adulterants in ——. Grotlisch B878
oil; Examination of mixtures containing benzene, petroleum spirit, and ——. Pritzker and Jungkunz B666
oil extracted from firs of Bucovina. Czerny B479
oil; Formation of borneols from ——. Murayama and Abe B33
oil; Formation and reactions of verbenone and verbenol from Grecian ——. Wienhaus and Schumm B807
oil; Preparation of borneol from ——. Murayama and others B731
oil; Preparation of isoborneol from ——. (P) Andreau, and Du Pont de Nemours and Co. B233
oil; Purifying crude ——. (P) Larrabee and others .. B720
oil substitute; Dipterocarpus spirit, a —— Cuénot B796
oil substitutes. (P) Tetralin Ges. B61
oils. Dupont B796
and products obtained from it. Lubarski B640
Recovery of —— in manufacture of cellulose. (P) Bilfar B939
Refining crude ——. (P) Jobson, and New York and Pennsylvania Co. B682
Tyramine. *See* p-Hydroxyphenylethylamine.
Tyrosine content of proteins; Determination of ——. .. B610
Determination of —— by bromination. Plimmer and Phillips B532

U

Ultra-filter membranes; Manufacture of ——. (P) Duclaux B657
Ultra-filtration apparatus. Bechhold and Gutlohn B733
devices. (P) Fouard B453
of fats and resins in organic solvents; Cellulose acetate membranes for ——. (P) Duclaux B972
Mechanism of ——. Duclaux and Errera B815
Technique of ——. Wha B308
Ultramarine colours; Manufacture of siliceous ——. (P) Kur and Wilkinson B265
Ultra-violet light; Inducting of growth-promoting and calcifying properties in a ration by exposure to ——. Steenbock and Black B962
rays; Apparatus for sterilising liquids by means of ——. (P) Aillaud B614
Unsaturated compounds; Determination of the "hydrogen value" of ——: the "hydrogenation value." Grün and Halden B431
Uranium in alloy steels. Vogel 368T
Analytical methods for ——. Moore and others B620*
in carnotite; Determination of ——. Brinton and Ellestad B1017
Electrometric determination of vanadium, iron, and —— separately and in mixtures with one another. Müller and Flath B79
Extraction of radium, vanadium, and —— from carnotite. Thews and Heinle B55
Preparation of pure ——. Jander B948
Separation of —— from titanium, iron, and aluminium. Moser B80
Separation of vanadium from ——. Canneri and Pestelli .. B979
Uranyl compounds; Determination of ——. Jander and Reeh .. B80
Urea or its derivatives and formaldehyde; Manufacture of condensation products of ——. (P) Goldschmidt and Neuss B185
its derivatives and formaldehyde; Manufacture of resinous condensation products from ——. (P) Pollak B720, B953, B987
Determination of —— in normal and pathological urines by means of urease. Revoltella B307
Feeding —— to milch cows. Honcamp and others B763
and formaldehyde; Pollopas, a condensation product of ——. Pollak and Ripper B878
Isolation of ——. (P) Soc. des Prod. Azotes B731
Preparation of ——. (P) Badische Anilin und Soda Fabr. B450
Preparation of —— from calcium cyanamide. (P) Chem. Fabr. Schering B354
Micro-quantitative determination of —— in products of living origin. Stanford B203
in shark meal. Dill B885
Urea derivatives; Preparation of ——. (P) Du Pont de Nemours and Co. B314*
Ureas; Preparation of tetra-substituted ——. (P) Tauberg and others B153*
Urease; Activity of —— in high concentrations of alcohol. Iwanoff B761
Effect of light on ——. Kato B69
Preparation of dried ——. Revoltella B307
Relationship between chemical structure of certain compounds and their effect upon activity of ——. Rockwood and Husa B191
Urine; Determination of lead in ——. Thresh B350
Ursolic acid. *See* Urson.
Urson. Van der Haar B534
Identity of malole and ——. Van der Haar B996
Identity of prunol and ——. Van der Haar B996

V

Vaccine; Preparation of a —— for tuberculosis. (P) Sata B76
Manufacture of —— from bacteria. (P) Chem. Fabr. Schering B115
Preparation of —— from living native bacilli or from acid-resistant bacilli previously treated with immunised serum. (P) Meister, Lucius, und Brüning B353
Stable ——. (P) Chem. Fabr. Schering B927*
Vacuum distillation. *See under* Distillation.
flasks; Heat-insulating material for ——. (P) Smith, and Stanley Insulating Co. B82
-pan unit. (P) Bancel, and Ingersoll Rand Co. B622
pans. (P) Engel, sen., and Buffalo Foundry and Machine Co. B82
pump; Metal annular-jet ——. Backhurst and Kaye .. B542
pump system; All-metal high- ——. Backhurst and Kaye .. B542
tubes; Coating filaments of ——. (P) Western Electric Co. B245*
Valerian root and certain other aromatic drugs; Analysis of ——. Bullock B805
Valeric acid; Identity of phocenic acid and ——. André .. B479
Valves for controlling, recovering, and by-passing flow of gas through purifiers, condensers, and the like. (P) Dempster and Sons, and others B287*
Gas-diverting —— of rotating type for use with purifiers and other gas apparatus. (P) Dempster, Ltd., and Rodger .. B85*
Vanadic acid; Alkalimetric determination of ——. Rosenheim and Yang B55
Reduction of arsenic acid by sulphurous acid in presence of ——. Auger and Odinot B172
Vanadio-iodates; Preparation of ——. Rosenheim and Yang B55
Vanadioperiodates; Preparation of ——. Rosenheim and Yang B55
Vanadiophosphates; Preparation of ——. Rosenheim and Yang B55
Vanadium in alloy steels. Vogel 367T
Analytical methods for ——. Moore and others B620*
or its compounds; Obtaining —— from pig-iron containing vanadium. (P) Von Seth B1017
Determination of —— by reduction with hydrogen peroxide and titration with potassium permanganate. Hothersall 270T, B853
Electrometric determination of uranium, iron, and ——, separately and in mixtures with one another. Müller and Flath B79
Extraction of radium, uranium, and —— from carnotite. Thews and Heinle B55
Influence of —— in properties of high-speed steel. Oertel and Pölzguter B912
Potentiometric determination of chromium, iron, and —— in presence of each other. Kolthoff and Tomicek .. B960
Recovery of ——. (P) Stokes, and United States Processes, Inc. B301

PAGE

Vanadium—*continued.*
Separation of uranium from ——. Cannerl and Pestelli .. B979
in steel; Volumetric determination of ——. Etheridge B97, B259
Vanadium compounds; Extraction of —— free from alumina and zinc. (P) Carus B421
Vanilla beans; Suitability of various solvents for extracting ——. Wilson and Sale n399
extracts; Lead number of ——. Clemens B888
Vanillin; Flavouring food with ——. (P) Soc. Chim. Usines du Rhône B533
Preparation of —— by means of ozone. Briner and others .. B277
Vaporisation of liquids at high pressures; Determination of latent heats of ——. McAdams and Morrell B929
Vaporising liquids. (P) Nyrop B816
Vapour extractor for distillation of fuel. (P) Bronder and Costigan B664
pressure tables; Graphical ——. Deming n621
Vapours: Absorbing —— and carrying out catalytic reactions. (P) Meister, Lucius, und Brüning B698
Adsorption apparatus for determination of organic —— in air or gas. Kattwinkel B546
Apparatus for absorbing —— by means of charcoal. (P) Meister, Lucius, u. Brüning B237
Apparatus for producing a counter-current action between liquids and large quantities of ——. (P) Metan Ges. .. B283
Determination of organic —— in gas mixtures by means of active charcoal:
Berl and Wachendorff B546
Fischer and Zerbe B700
Electrical purification of ——. (P) North and Loosli .. B406
Recovering constituents of mixtures of —— by adsorption. (P) Lorenz B930
Separating constituents of mixtures of gases and ——. (P) Meister, Lucius, u. Brüning B157, B157
Separating mixtures of —— by means of charcoal. (P) Meister, Lucius, u. Brüning B322
Separating vapours from, or dissolving —— in liquids. (P) Fraisse n40
Separation of organic —— from air etc. (P) Bayer und Co. B622
Varnish making; Mechanism of the gum-running process in ——. Wolff B952
Manufacture of amber ——. (P) Siemens und Halske A.-G. B604
Manufacture of substitutes for linseed oil ——. (P) Pohl, and Jäger Ges. B392
paint; Case of colloidal thickening in a ——. Coffignier .. B839
-removing compositions. (P) Mains B434
solvents; Danger of ignition of —— through electrical excitation. Holde B898
solvents; Lower of boiling point in mixtures of ——. Mylrvang B739
Varnishes; Alkali viscosity increase test for tung oil ——. Gardner and Holdt B682
De-livering ——. (P) Bradley B224
Determination of time of drying of ——. Wolff B303
Esterification of Congo copal and properties of the copal ester ——. Brendel B63
Filtering ——. (P) Ward B186
and the like; Manufacture of formol-phenolic ——. (P) Filhol B797*
Manufacture of ——:
(P) Bayer und Co. B265
(P) Holzapfel B141
Manufacture of —— with cellulose derivatives. (P) Dreyfus B977
Method of mixing rubber compounds as used in manufacture of insulating ——. (P) Russell and Broomfield B480
Physical tests on some commercial ——. Gardner and Parks B839
Preparation of oils for ——. (P) Calderwood and others .. B682
Relationship of physical tests and chemical composition of oil —— to durability. Pearce n682
"Skinning" of oil —— and use of cobalt driers. Brendel .. B433
Vegetable ivory; Hydrolysis of —— by its own enzymes. Paton and others B532
Vegetable juices extracted by pressure; Composition of ——. André B148
matter; Preserving sap-containing ——. (P) Siemens-Schuckertwerke Ges. B844
matter; Treating liquor from lixiviation of ——. (P) Colas and others n743*
oils. *See under* Oils, Fatty.
pulps; Absorptive power of ——. Effront B763
Vegetables; Preserving —— and apparatus for treating air for use in the process. (P) Cuthbertson B690
Verbenol; Formation and reactions of —— from turpentine oil. Wienhaus and Schumm n807
Verbenone; Formation and reactions of —— from turpentine oil. Wienhaus and Schumm B807
Vermifuges and the like. (P) Bagnall-Bull B573
Vermin; Eradication of ——. (P) Bayer und Co. B804
Vernine. *See* Guanosine.
Veronal; Colour reactions of ——. Parri B767
Vessels of high chemical resistance; Manufacture of ——. (P) Gebr. Siemens und Co. B737
Vinasses from distillation of molasses; Action of sulphuric acid on ——. Kronacker B691
Recovery of nitrogen compounds and acetone from ——. (P) Synd. d'Etudes Chim. B802
Vinegar; Effect of transient lack of spirit in production of ——. Wüstenfeld B348
or foodstuffs containing it; Detection of saccharin and dulcin in ——. Reif B111

PAGE

Vinegar—*continued.*
making; Over-oxidation in —— and its prevention. Wüstenfeld n69
Manufacture of —— from amylaceous matter. Bettinger .. B227
Manufacture of —— from crude or refined spirit. Wüstenfeld B348
manufacture; Downward aeration plant in ——. Wüstenfeld B568
manufacture; Poisoning of acetic bacteria as cause of disturbances in ——. Popper B569
manufacture; Use of nutrient salts in ——. Wüstenfeld .. B69
Vinegars from different sources; Differentiation of ——. Arbenz B762
Vineyards; Dissemination of yeasts in —— by insects. Sergent and Rougebief B307
Vinyldiacetonalkamines; Derivatives of ——. Kipping n197
Viscose; Manufacture of ——:
(P) Dreyfus B51
(P) Huttinger, and Acme Artificial Silk Co. B784
Manufacture of artificial threads and the like of ——. (P) Kämpf B250
Manufacture of cellulose products, especially threads and films, from ——. (P) Stafa A.-G. B905
Manufacture of threads, bands, films, and the like from ——. (P) Schadec, and N. V. Hollandsche Kunstzijde Ind. .. B51
Manufacture of threads, filaments, and the like from ——. (P) Courtaulds, Ltd., and Cross B706
Manufacture of threads, films, ribbons, etc., from ——. (P) Perl B464
Preparation of artificial threads etc. from ——. (P) Müller B415
Preparation of a cellulose gel suitable for films and the like from ——. (P) Faust B628
Preparation of threads from concentrated solutions of ——. (P) Linkmeyer B415
Production of easily dyed products from ——. (P) Neumann B826
reaction. Rassow and Wadewitz B289
solutions; Manufacture of artificial silk and like materials from ——. (P) Dreaper B592
solutions; Manufacture of cellulose structures from ——. (P) Glanzfäden A.-G. B52
Treatment of artificial silk and other artificial textile products made from ——. (P) N. V. Nederlandsche Kunstzijdefabr. B1009
Viscosimeter. Murasco B237
Design and use of the Lidstone ——. Barr 29T, B968
for determining viscosity of resin solutions and the like. Albert n454
Mercurial —— compensated for density. Lidstone 87T
Modified Lidstone ——. Lidstone B404
New type of ——. Gallo and Tenaul B851
Viscosimeters; Capillary tube ——. Barr B116
Rapid ——. Klever B892
Relation between times of flow in Klever rapid —— and Engler viscosimeters. Klever and others B892
Viscosities of liquids experimentally correlated to pendulum dampings. Barton and Browning n319
Viscosity of heterogeneous systems such as paints; Determination of ——. Wolff B916
of highly viscous substances; Determination of ——. Berl and others B364
of mineral lubricating oils. Leu B586
of oils at high temperatures. Fortsch and Wilson B777
and surface tension of lubricating oils. Don B818
-temperature curves of fractions of typical American crude oils. Lane and Dean B858
-temperature relation and its bearing on colloidal character. Drummond 324T
Variation of —— with temperature. König B121, B208
Vitamin; Antineuritic —— in poultry flesh and eggs. Hoagland and Lee B962
Antineuritic ——. *See also* Vitamin B.
antiscorbutic; Production of organic lime preparations containing a high percentage of readily absorbable ——. (P) Eichelbaum B967
Antiscorbutic ——. *See also* Vitamin C.
compound. (P) Eoff, jun., and Vitamine Products Co. .. B350
content of barley, malt, and malted liquors. Southgate .. B958
content of bread. Hara B228
content of cod-liver oil and malt extract. Stammers .. B349
content of the lentil. Jones and Murphy B533
content of various edible fungi. Hara B30
Existence of a specific —— for reproduction. Sure B309
Extraction of fat-soluble ——. (P) Takahashi, and Zaidan Hojin Rikagaku Kenkyujo B886
Fat-soluble ——. Induction of growth-promoting and calcifying properties in a ration by exposure to ultra-violet light. Steenbock and Black B962
Fat-soluble ——. Sunlight in its relation to pork production on restricted rations. Steenbock and others B1026
-free products and foodstuffs; Preparation of ——. (P) Funk and Freedman B994
producing growth in bacteria; Quantitative determination of ——. Davidsohn B1026
Relation of fat-soluble —— to rickets and growth in pigs. Zilva and others B962
solution from yeast. (P) Harris B112
substance; Preparation of a ——. (P) Harris B489
Yeast growth-promoting —— tested for its effects on animals. Deas B844
Vitamin A of cod-liver oil; Durability of ——. Poulsson .. B962
in cod liver oil; Influence of storage and of emulsification on the ——. Drummond and others 236T, B952

PAGE

Vitamin A—*continued*.
of cod liver oil; Stability of —— towards the hardening process. Zilva .. B962
Content of —— in certain S. African oils. Delf .. B350
Experiments on ——. Sherman and Kramer .. B533
Feeding experiments in connexion with ——. Stammers B349
in frozen pork. Wright .. B110
potency of cod liver oil; Effect of storage of livers on ——. Holmes .. B390
potency of cod-liver and hake-liver oils. Holmes .. B431
potency of cod-liver oil; Relation of —— to sexual condition and age of the cod. Zilva and others .. B342
Presence of —— in commercial lecithin. Eichholtz .. B228

Vitamin B; Comparison of bios with ——. Lucas .. B1025
Concentration of ——. Levene and Van der Hoever .. B961
content of white bread. Hartwell .. B349
Critical investigation and an application of the rat-growth method for study of ——. Sherman and Spohn .. B195
Destruction of —— by age. Findlay .. B195
Experiments with two methods for study of ——. Shermann and Edgeworth .. B195
Feeding experiments in connexion with ——. Stammers .. B349
Investigations of barley, malt, and beer for ——. Harden and Zilva .. B958
Orange juice as source of ——. Stammers .. B349
Preparation of a crystalline picrate having the anti-neuritic properties of ——. Seidell .. B689
Quantitative study of destruction of —— by heat. Sherman and Grose .. B195
Reaction proposed by Jendrassik as characteristic of —— and its relation with the phenolic grouping. Bezssonoff B397
See also Antineuritic substance *and* Vitamin, Antineuritic.

Vitamin C; Additional requirement for the test with the reagent for ——. Bezssonoff .. B571
in canned foods. Eddy and Kohman .. B195
Comparison of bios with ——. Lucas .. B1025
Investigations of barley, malt, and beer for ——. Harden and Zilva .. B958
Value of Bezssonoff's reaction for indicating the presence of —— in juice of sauerkraut. Wedgwood and Ford .. B571
See also Antiscorbutic factor *and* Vitamin, Antiscorbutic.

Vitamins. Marchlewski and Wierzchowski .. B397
Antineuritic ——. Gaglio .. B228
Association of manganese with ——. McHargue .. B651
Classification and grouping of ——. Tönnis .. B726
Fat-soluble ——. Inorganic phosphorus and calcium of the blood used as criteria in demonstration of existence of a specific antirachitic vitamin. Steenbock and others B228
Fat-soluble ——. Stability of antirachitic vitamin to saponification. Steenbock and others .. B273
Identity or non-identity of antineuritic and water-soluble B ——. Levene and Muhlfeld .. B71
Influence of vitamin administration on exchange of gases, weight, and life period of white mice previously fed without ——. Groebbels .. B689
Process for obtaining ——. (P) Agopian .. B612
Water- and fat-soluble D- ——. Von Euler .. B309

Vitreous coatings on metals; Production of ——. (P) Crossley B675
materials; Production of gas-tight seals between metal and ——. (P) Reynolds, and Silica Synd. .. B423*
products; Manufacture of ——. (P) Crossley .. B58*

Volatile ingredients of a liquid mixture; Separating ——. (P) Lemale .. B877
liquids; Fractionation of complex mixtures and recovery of ——. Lemale .. B542
liquids, solvents, and the like; Recovery of ——. (P) Pickford .. B374
materials: Separating —— from less volatile or non-volatile materials. (P) Weeker .. B877
solvents. *See under* Solvents.
substances; Concentration of aqueous solutions of ——. (P) Lichtenthaeler .. B671
substances; Purification of ——. (P) Cotton, and Du Pont de Nemours and Co. .. B1030

Voltol process; Treatment of fatty and mineral oils by the ——. Eichwald .. B754

Vulcanisation; Accelerating influence of an azo dye in ——. Drakeley and others .. 238T, B683
Acceleration of ——. Influence of acetone-soluble constituent of rubber on physical and chemical properties of accelerated rubber stocks. Sebrell and Vogt .. B798
Acceleration of —— by xanthates and influence of metallic oxides as promoters. Twiss and Thomas .. B64
accelerator; Use of diphenylguanidine as ——. Ames 117T, B434
accelerators. (P) Bedford, and Goodyear Tire and Rubber Co. B105*, B954
accelerators; Analysis of organic rubber ——. Callan and Strafford .. 1T
accelerators; Determination of activity of ——. Martin and Davey .. 31T, B266
accelerators; Manufacture of ——. (P) Shepard and others B1020
accelerators; Manufacture of formaldehyde condensation products of aliphatic amines for use as ——. (P) Shepard and others .. B35
accelerators; Salts of α-phenylbiguanide as ——. Romani B104
accelerators; Thiocarbanilide derivatives for use as ——. (P) Bedford and others .. B105*
of caoutchouc, gutta-percha and the like. (P) Chatelan .. B605
and depolymerisation. Kirchhof .. B186
of rubber and the like. (P) Cadwell and others .. B605

PAGE

Vulcanised articles; Manufacture of ——. (P) Goodrich Co. B393
Vulcanite; Influence of compounding ingredients in ——. Glancy. .. B480
Production of masses resembling ——. (P) Wenjacit Ges. B527
Production of a substance resembling ——. (P) Frerichs .. B266
See also Ebonite.

W

Wall coverings; Manufacture of slabs for ——. (P) Jansen .. B384
Washing apparatus for purification of colloidal gels; Continuously acting ——. De Jong .. B2
classification, and separation of solid materials. (P) Maison Beer, and Charlier .. B281
fabrics and other materials. (P) Hohenloher Seifenfabriken A.-G. .. B827
fine particles of minerals. (P) France .. B456*
granular material; Apparatus for ——. (P) Greaves .. B699*
liquids with liquids; Apparatus for ——. (P) Koppers, and Koppers Coke Oven Co. .. B583
plant: Mineral ——. (P) France .. B42*
plant; Upward-current mineral ——. (P) France .. B360
screening, and separating apparatus. (P) Dixon .. B699*

Waste-heat boilers and vertical retort installations .. B659
-heat dryers. (P) Lide .. B999
-heat dryers for whiteware. Wakler, jun. .. B911
heat; Recovery of —— in open-hearth practice. Dyrssen B518
liquids; Purification of ——. (P) Benoit .. B311, B886
organic matter; Continuous reduction process for treating ——. (P) Maclachlan, and Maclachlan Reduction Process Co. .. B534*
vegetable matter; Carbonisation of ——. (P) Von Radolin B664

Water; Accelerating the softening of ——. (P) Maschinenbau A.-G. Balcke .. B398
Action of precipitated iron hydroxide on flora and fauna of natural flowing ——. Krämer .. B490
analysis. Zink and Hollandt .. B844
analysis; Alterations in methods of ——. Lührig .. B652
analysis; Report on standard methods of bacteriological —— .. B613
Apparatus for detecting traces of free chlorine in chlorinated ——. (P) Olszewski and Sperling .. B845
Apparatus for distilling ——. (P) Appareils et Evaporateurs Kestner .. B573
Apparatus for electrolysis of ——. (P) Casale .. B915
Apparatus for purifying and treating ——, especially boiler-feed water. (P) Haythorpe .. B804*
Apparatus for treating —— with chemical reagents. (P) Paterson .. B73*
boiler-feed; Boiler corrosion and treatment of ——. Winstanley .. B728
boiler-feed; Separating scale-forming salts from —— and removing scale already formed. (P) Sichert .. B995
Chlorinators for ——. (P) Wallace, and Wallace and Tiernan Co. .. B73
in coal, tar, and oil; Apparatus for automatic determination of ——. Schaefer .. B973
Colorimetric determination of small quantities of lead and copper in drinking ——. Pyriki .. B845
Colour reaction for detecting nitrites in ——. Stooff .. B728
containing alkali bicarbonates; Treatment of ——. (P) Grant, and Becco Engineering and Chemical Co. .. B112
containing free chlorine; Effect of —— in bread-making. Morison .. B993
Content of combined —— in solid fuels. Kreulen .. B408
Continuous softening of ——. (P) Wayne Tank and Pump Co. .. B196
Corrosive action of brackish —— on metals. Perks .. 75T
De-aerating —— particularly feed-water for boilers. (P) Johnson, and Hick, Hargreaves and Co. .. B614*
Defect in permanent colour standards for determination of iron in ——. Whipple .. B765
Deoxidising ——. (P) Kestner .. B73*
Detection of free chlorine in drinking ——. Olszewski .. B728
Detection of nitrites in —— by means of Neutral Red. Stooff and Horn .. B442
Detection of suspended matter in, and proposed standard of clarity for, filtered ——. Baylis .. B764
Determination of dissolved air in small quantities of ——. Becker and Abbott .. B112
Determination of dissolved oxygen in —— in presence of iron salts. Buswell and Gallaher .. B72
Determination of dissolved oxygen in small samples of ——. Winkler .. B573
Determination of hardness of ——:
Targi and Gasperini .. B350
Weissenberger .. B150
Determination of hardness of —— by means of soap solution. Craan .. B310
Determination of hydrogen-ion concentration of drinking ——. Olszewski .. B573
Determination of lead in potable ——. Thresh .. B350
Determination of manganese in —— by the sodium bismuthate method. Collins and Foster .. B652
Determination of nitrates in ——:
Massink .. B886
Scheringa .. B886
Determination of nitrites and nitrates in —— by the hydrostrychnine reagent. Kolthoff .. B886
distilled; Toxic action of —— and its antagonism by cations. Scarth .. B1027

PAGE

Water—*continued.*
Effect of storage on artificially polluted ——. Frederick .. B274
Electro-osmotic purification of ——. (P) Elektro-Osmose A.-G. .. B275
Electro-osmotic separation of salts from ——. (P) Elektro-Osmose A.-G. .. B804, B845
filter plant effluents; Hydrogen-ion concentration and soluble aluminium in ——. Hatfield .. B572
filter-plant operation; Effect of an impounding reservoir on ——. Stanley and Ruthrauff .. B727
filtering and softening apparatus. (P) Hepburn .. B311*
filters; Cleaning sand of —— without removal. Carpen .. B727
filters; Means for automatically securing the slow starting of mechanical pressure —— after cleaning. (P) Candy .. B231*
filters; Separation of impurities from wash-water of ——. (P) Bramwell .. B351
Filtration of ——. (P) Smith .. B804
Filtration of —— with membrane filters. Zsigmondy .. B803*
Foaming of boiling ——. Foulk .. B1027
-gas. *See under* Gas.
Heating and de-aerating ——. (P) Morison .. B534
Hydrogen-ion concentration of lime-treated —— and its effect on bacteria of the colon-typhoid group. Scott and McClure .. B572
Influence of hydrogen-ion concentration on dose of alum, and mechanism of action of alum in clarification of natural ——. Banerji .. B350
Modified pre-chlorination treatment of ——. Howard .. B613
Nephelometric determination of hardness of ——. Feigl and Pavelka .. B968
Plant for sterilising ——. (P) Cabrol .. B150
Purification of ——. (P) Elektro-Osmose A.-G., and others B309*
purification; Agitation with alum in ——. Cox .. B764
Purification of coloured ——. Norcom .. B275
purification by filters charged with aluminium hydroxide or ferric hydroxide. Clark .. B441
purification; Function of aeration in ——. Pirnie .. B728
purification; Hydrogen-ion control in —— .. B727
purification for industrial purposes. O'Callaghan .. B310
-purifying apparatus. (P) Declercq .. B490
-purifying apparatus; Automatic supply of reagents in ——. (P) Declercq .. B573*
-purifying apparatus; Mixer for ozone ——. (P) Hartman, and Electric Water Sterilizer and Ozone Co. .. B150
Purifying waste —— of chemical factories. (P) Benoit .. B886
Quantitative expression of the aggressivity of —— and applicability of de-acidification processes. Mündlein .. B440
Re-carbonation of softened ——. Hill, jun. .. B441
Regenerating spent zeolites which have been used for softening ——. (P) Kriegsheim, and Permutit Co. .. B351
Relative solubilities of quartz, lead smelter slag, chrome ore, and silicate filter grits in hot alkaline ——. Hall and others .. B691
Removal of dissolved organic matter from surface drinking ——. Pfeiffer .. B803
Removal of iron from drinking ——. Kisskalt .. B230
Results of chemical and bacteriological examination of London ——. Houston .. B727
Rodillon's test for nitrites in ——. Leffmann .. B534
Rôle of —— in reactions in the solid state. Balarew B595, B1011
Softening ——:
(P) Hartman and others .. B766
(P) Wayne Tank and Pump Co. .. B72
-softening apparatus; Automatic ——. (P) Wayne Tank and Pump Co. .. B73
softening by base exchange. Baker .. B274
softening; Feeding successive charges of brine into the regenerating chambers of apparatus for ——. (P) Wayne Tank and Pump Co. .. B311
-softening materials; Manufacture of ——:
(P) Dahl-Rode .. B491
(P) Lassen, and United Water Softeners, Ltd. .. B351
softening by means of doucil. Hilditch and Wheaton .. B310
softening; Regeneration of base-exchanging substances in ——. (P) Morawe .. B845
Softening and removing dissolved salts from ——. Mayer and Schön .. B441
softening; Stabilised glauconite for ——. (P) Nordell, and Wayne Tank and Pump Co. .. B886
Soluble aluminium and the hæmatoxylin test in filtered ——. Hatfield .. B397
Spring —— of unusual composition. Thomson and Sorley B274
Sterilisation of —— by chlorine in association with ammonia, as compared with sterilisation by chlorine alone, or "chloros" or bleaching powder. Harold and Ward .. B886
supply; Anaerobic lactose-fermenting spore-bearers in the Minneapolis ——. Raab .. B72
Taste and odour in chlorinated ——. Warren and Bartow B764
Titration of hydroxyl and carbonate ions in presence of one another in drinking ——. Scheringa .. B231
treatment problems in Ontario. Delaporte .. B612
treatment; Recent experiences in ——. Armstrong and others .. B994
Use of chlorine to assist coagulation of impurities in ——. Weston .. B441
Volumetric determination of total carbonic acid in hard tap ——. Crowther and Martin .. B923

Water-glass; Manufacture of ——. (P) Schneider .. B558

Waterproof coating compositions. (P) Schmidt and Schmidt .. B265

Waterproofing cellulose or carbohydrates of the cellulose group. (P) Moeller .. B12
materials. (P) Viello .. B213

materials by means of rubber latex. (P) Russell and Broomfield .. B348
materials for stone etc.; Exposure tests on colourless ——. Kessler .. B382
porous materials; Solutions for ——. (P) Hendrich .. B831
pottery, porcelain, earthenware, and other porous minerals. (P) Potter and others .. B58
process suitable for textile fabrics. (P) Grant .. B331

Waters; Method of differentiating sulphurous ——. Desgrez and others .. B763
mineral; Electrical conductivity of —— as a means of control. Kopaczewski and Bem .. B764
Optimum hydrogen-ion concentrations for coagulation of various ——. Catlett .. B764
Treatment of residual ——. (P) Bonillon .. B112*

Wattle bark from Ceylon .. B267
barks. Welch and others .. B758
-wood; Composition of ——. English .. B742

Wax of American cotton; Alcohols present in ——. Fargher and Probert .. B640
Apparatus for sweating or crystallising ——. (P) Burmah Oil Co., and others .. B165
Cotton ——. *See under* Cotton.
of Egyptian Sakellarides cotton; Constituents of ——. Fargher and Higginbotham .. B903
substitutes; Manufacture of kneadable ——. (P) Von Boyen B681

Waxes. Armstrong and Allan .. 214T
Apparatus for extracting ——. (P) Nield .. B565, B729*
and the like; Treating —— to remove or recover substances therefrom. (P) Patrick and others .. B1005
Manufacture of artificial ——. (P) Erdöl- u. Kohle-Verwertung A.-G., and Zernik .. B392
Micro-analytical methods for examination of small quantities of ——. Fargher and Higginbotham .. B370
Preparation of —— from crude montan wax or bituminous coal. (P) Jena .. B641
Purification of ——. (P) Oil Refining Improvements Co., and Hood .. B47

Weed-killers. (P) Badische Anilin- und Soda-Fabrik .. B437

Weld metal; Mode of retention of nitrogen in electric arc ——. Willey .. 263T, 267T, B945

Welded joints in tramway rails; Macrostructure of ——. Jimeno and Del Fresno .. B874

Welding electrodes:
(P) Copland .. B21
(P) Holslag, and Electric Arc Cutting and Welding Co. .. B181
(P) Lloyd and others .. B562
metals; Gaseous fuel for ——. (P) Rose and Harris .. B8
metals, specially applicable to electrical conductors. (P) General Electric Co. .. B985

Welsbach mantle. *See under* Incandescence

Weston standard cells; Effect of various preparations of mercurous sulphate on electromotive force and hysteresis of ——. Vosburgh and Eppley .. B222

Whale oil. *See under* Oils, Fatty.

Wheat; Antagonism of hydrogen and neutral-salt ions in their action on germination and growth of ——. Lundegardh B989
Biological value for maintenance and growth of proteins of whole ——. Mitchell and Carman .. B884
bran. *See under* Bran.
Course of acidity changes during growth of —— with special reference to stem rust resistance. Hurd .. B722
Determination of moisture in ——. Snyder and Sullivan .. B688
Determination of starch in ——. Ling and others .. B991
Determination of vitality of —— by a biochemical method. Marotta and Kaminka .. B688
Effect of fertilisers on development of stem rust in ——. Stakman and Aamodt .. B646
Effect of germination on the aleurone layer of ——. Bennion .. B884
Effect of modified hot-water treatment on germination, growth, and yield of ——. Tapke .. B842
Effect of storage on baking quality of common and durum ——. Mangels .. B884
endosperm; Phytosterols of ——. Anderson and Nabenhauer .. B729
flour. *See under* Flour.
gluten; Effect of inert matter on properties of ——. Gerum and Metzer .. B570
and mill products; Change in hydrogen-ion concentration of ——. Sharp .. B688
offals; their grinding, composition, and digestibility. Woodman B70
plants; Colloidal properties of winter —— in relationship to frost resistance. Newton .. B484
Relation of moisture and available nitrogen to yield and protein content of ——. Neidig and Snyder .. B989
Relation of molecular proportions in the nutrient solution to the growth of ——. Sewell .. B988
starch. *See under* Starch.

Whisky; Rate of loss of strength of —— kept exposed to the air. Lowe .. B348

White lead; Manufacture of ——:
(P) Lloyd and others .. B987
(P) Rascher and Plauein .. B839
Manufacture of —— by the Dutch process. Chercheffsky .. B303
Manufacture of —— in hard scales. Lenoble .. B62
process; Dutch ——. Shaw .. B184
See also Lead carbonate, basic.

Whiting; Manufacture of ——. (P) Dorr Co. .. B756
U. S. Bureau of Standards specification for ceramic ——. .. B598
o

PAGE
Willemite; Active agents in luminescent ——. Tanaka B595
Wine analysis; Application of micro-analysis to ——. Malvezin .. B193
Browning of ——. Müller-Thurgau and others B109
Clarifying —— with potassium ferrocyanide:
Bosselmann B568
Krug B993
Determination of acetaldehyde in ——. Beythien and others .. B959
Determination of dry extract of ——. Schindler B308
Determination of glycerol in ——. Marchi B110
Determination of small quantities of cyanides in —— and an examination of the Möslinger clarification process. Mach and Fischler B725
Determination of volatile acidity of ——. Pujo B687
Determination of zinc, bismuth, formaldehyde, formic acid, and chlorine in ——. Seiler B486
distillates containing hydrocyanic acid. Reichard B725
Influence of sunshine and fertilisers on quality of —— as indicated by its content of sugar and acids. Omeis B485
malt-; Manufacture of ——. (P) Meessen B29
Recent processes for production of red ——. Mathieu B486
Use of sulphurous acid to prevent browning of ——. Müller-Thurgau and others B109
yeasts. Kayser and Delaval B762

Wines; Analysis and control of pasty decolorising charcoal used for clarification of tinted white ——. Rocques B396
Characterisation and evaluation of ferric "casse" of ——. Malvezin and Essner B1025
Determination of sugar in sweet —— particularly in Madeira wines. Klein B486
Mustard flour and oil as preservatives for ——. Delage.. .. B89
Mustard oil as preservative for ——. Malvezin and Bidait .. B227
Sucrose in ——. Fallot B843
Sulphite-phosphates in ——. Fonzes-Diacon B762

Wire; Coating —— with other metals. (P) Cowper-Coles B601

Witte's peptone. *See under* Peptone.

Wolframite; Continuous process for manufacture of sodium tungstate and tungstic acid from ——. Gordon and Spring B631

Wood; Alteration of chipped —— during storage. Bergström .. B373
Apparatus for carbonising ——. (P) Shaw B501
Apparatus for seasoning ——. (P) Lyon B58
Apple ——. *See under* Apple.
Artificial seasoning of ——. (P) Lyon B749
cellulose. *See under* Cellulose.
Chemical changes in ground —— during decay. Bray and Andrews B249
Comparison of action of chlorine and chlorine dioxide on ——. Heuser and Merlau B127
Composition for preserving ——. (P) Vandevoorde, and N. V. Netherland Colonial Trading Co. B911*
Constituents of —— capable of producing colours. Wichelhaus B96
Continuous distillation of ——. (P) Reitmayer, and Gebr. Brünner B326
Counter-current digestion of ——. Haslam and Ryan B249
decay in alkali soils. Schmitz B645
Decayed —— for sulphite pulp. Rue and others.. .. .. B330
Determination of cellulose in ——. Ritter B904
Determination of cellulose in —— by the chlorination method. Ritter and Fleck B249
Determination of lignin in ——. Von Euler B127
Disintegration of ——. (P) Goldschmidt A.-G., and Hägglund .. B707
distillates; Separating acetic acid from ——. (P) Piron, and Piron Coal Distillation Systems B161
distillation; Apparatus for ——. (P) Meiner B821
distillation; Fractional ——. (P) Carbozit A.-G. B740
distillation; Recovering gases formed during ——. (P) Ott .. B459
Effect of different kinds of —— on plant growth. Viljoen and Fred B484
Hardening ——. (P) Holzveredelung Ges., and Trenkler .. B631*
Hydrolysis of —— by acids as a swelling, ageing, and surface problem. Schwalbe B937
Hydrolysis of cellulose in ——. (P) Goldschmidt A.-G. .. B593
Impregnating ——. (P) Finkelstein B749
Impregnating or coating —— as a protection against rot. (P) Murmann B831
Influence of moisture on carbonisation of ——. Mariller .. B325
New methods of saccharifying ——. Hägglund B649
and other vegetable substances; Saccharification of —— by dilute acids. (P) Moser and Von Pezold B814
Pine ——. *See under* Pine.
Plant and retort for treatment of ——. (P) Fish, jun. B797
Potash fusion of ——. Heuser and Herrmann B290
Preservation of ——:
(P) Bodmar B58
(P) Forssman B219
Preservation of ——. (P) Tolmer B469
Preservation of —— for use in manufacture of paper pulp. (P) Audibert and others B1009
-preserving emulsions. (P) Fidey B1014
Pressure oxidation of ——. Fischer and others B169
of principal forest trees in Japan; Content of methoxyl group in —— and its utilisation by dry distillation. Miura .. B624
Production of material for sizing or ground-coating ——. (P) Eggers and Burlin B104
pulp; Apparatus for recovery of sulphur dioxide in manufacture of ——. (P) Decker B170
pulp; Carbohydrates of sulphite ——. Hägglund and Klingstedt B938
pulp; Determination of mechanical —— in printing papers. Teicher B938
pulp; Digesting ——. (P) Morterud, and A./S. Cellulosepatenter B213
pulp digestion process; Physical chemistry of the ——. Arrhenius B903

Wood—*continued*.
pulp digestion process; Sulphite ——. (P) Sieber B667
pulp; Extracting valuable by-products from cooking liquors from production of ——. (P) Goodell B742
pulp; Rapid high-pressure digestion of sulphite ——. Schwalbe B50
pulp, sulphate-; Reclamation of salts of low melting point from black liquor from manufacture of ——. (P) Plumstead, and Jessup and Moore Paper Co. B742
pulp; Testing of ——. Klein B668
pulp; Testing mechanical ——. Hawkings B330
pulp; Use of wood of common fir in manufacture of ——. Freund B463
pulp waste liquor; Destructive distillation of ——. (P) Griffin B404
pulps; Testing of chemical —— for strength. Baker and Jennison B463
Relation between durability and chemical composition in ——. Hawley and others B676
Relationship between methoxyl and lignin in ——. Ritter .. B50
Retorts for destructive distillation of —— and oxidation of the vapours. (P) Ott B209
and similar material containing cellulose; Isolation of tannins, resins, and other soluble constituents from ——. (P) Zellstoff-fabr. Waldhof, and others B393
spirit oil; Components of ——. Pringsheim and Gorgas .. B925
Spruce ——. *See under* Spruce.
Staining —— by means of colloidal silver. Von Weimarn .. B629
substitute; Production of ——. (P) Freudenberg B383
Treatment of —— with carbon bisulphide and alkali. Thaysen and Bunker B336
Use of —— in gas producers for heating glass furnaces. Saxton B174
used for manufacture of cellulose; Examination of ——. Sieber B50

Wooden tubes for conveying acids and gases. (P) Zerkowitz.. .. B407

Woods; Newfoundland coniferous —— and their properties. Barnes B248

Wool; Amino-nitrogen of —— in relation to chlorination. Trotman and Wyche 293T, B937
Apparatus for dyeing bobbins of combed ——. (P) Usines de Keukelaere B332
Behaviour of —— on solution in phenols. Herzog and Krahn .. B644
Cleaning and treating ——. (P) United States Wool Co. .. B373
Colour reactions of —— and determination of acidity of wool. Meunier and Rey B370
Dyeing —— with dyestuffs capable of being chromed. (P) Akt.-Ges. für Anilin-Fabr. B939*
dyestuffs; Fixation of acid —— of the type of Orange II. Ruggli and Fischli B554
Drying machines for ——. (P) Hawkins B128
Erosion of —— by atmospheric influences. Heermann B628
-fat. Glassow B838
Hygroscopic capacity of ——. Shorter and Hall B628
Industrial chlorination of ——. Meunier and Latreille B10
Influence of micro-organisms in weathering of ——. Trotman and Sutton 190T, B505
Machines for washing ——. (P) Kay B713*
Mordanting —— with chromium compounds. Cross and King .. B1009
Mordanting and dyeing ——. (P) Telen, and Du Pont de Nemours and Co. B508
Protection of —— during carbonisation. (P) Bennert B706
Recovering —— from fabrics. (P) Ogden B905*
Relation between nitrogen of —— and its affinity for acid and basic dyestuffs. Trotman B331
Scouring, bleaching, dyeing, wet acid carbonising and like processes of ——. (P) Davies and Haigh B291
-scouring effluents; Preparation of a paint vehicle from ——. (P) Fink B101
Treatment of —— to prepare it for manufacture. (P) Coghlan B91*
-washing waters; Purification of —— with recovery of the products they contain. (P) Van Overstraeten B592

Woollen goods; Treatment of —— to prevent shrinkage. (P) Weitzel B901
materials; Electroscopic method and apparatus for testing the genuineness of ——. (P) Beraini B91*

Wort. *See under* Beer.

Wound-hormones; Preparation of ——. (P) Naswytis B616

Writing tablets; Manufacture of enamelled ——. (P) Zulauf .. B675

Written matter; Reproduction of ——. (P) Chem. Fabr. Pharma B375

X

Xanthates; Manufacture of alkali ——. (P) Rosenstein B908

Xanthine oxidase of milk; Dynamics of the oxydase system. Dixon and Thurlow B960
oxydase of milk; Preparation and properties of ——. Dixon and Thurlow B960
oxydase of milk. Reduction of nitrates. Dixon and Thurlow B960

X-ray analysis of coal. Kemp B283
examination of aged metal hydroxides. Fricke and Wever .. B710
examination; Poisoning from barium sulphate used in ——. Dinslage and Bartschat B466
examining unit and X-ray analysis of coal. Kemp .. 234T, B931
spectroscopic examination of nature of swelling of fibrous substances. Katz B782
spectrum of cellulose. Gonell B937
studies on copper-aluminium alloys. Jette and others B299
studies on crystal structure of steel. Westgren and Phragmén B518
work; Photographic film for ——. (P) Sulzer, and Eastman Kodak Co. B356

PAGE

X-rays; Quantitative chemical analysis by means of ——. Stintzing .. B316
Zinc sulphide for fluorescent screens for ——. (P) Lilienfeld and Jahoda .. B908
Xylan; Caustic potash fusion of ——. Heuser and Roth .. B395
Xylene; Formation of a distillation residue in ——. Muller and Langedijk .. B9
m-Xylidine benzenemonosulphonate. Keyworth .. 342T
salts of 2.7- and 2.6-naphthalenedisulphonic acids. Forster and Keyworth .. 167T
salts of α- and β-naphthalenesulphonic acids; Forster and Keyworth .. 300T
Xylolite; Production of ——. (P) Anlt .. B517
Xylose; Action of highly concentrated hydrochloric acid on some derivatives of ——. Hirst and Morrison .. B168
o-Xylylaldehyde; Triphenylmethane dyestuffs prepared from ——. (P) Craver, and Barrett Co. .. B10

Y

Yacca gum. *See* Gum accroides.
Yarn; Apparatus for dyeing and sizing ——. (P) Nuttall .. B333*
artificial; Gutter for treating ——. (P) Bemberg A.-G. .. B251
Autographic testing machine for ——. Shorter and Hall .. B88
Dyeing, washing, scouring, bleaching, or impregnating skeins or hanks of ——. (P) Lord .. B827
Drying —— which has been treated with dye or other liquors upon a beam or the like. (P) Brandwood and others .. B91
in hanks; Machines for sizing, dyeing, bleaching, washing, scouring, mordanting, and mercerising ——. (P) Lord .. B14
Impregnating —— with leather. (P) Scholz .. B464*
Physical tests on sized ——. Owen .. B50
Squeezing frame for apparatus for treating hanks of —— with liquids. (P) Lord .. B594*
Treatment of ——. (P) Bliss, and British Research Assoc. for Woollen and Worsted Industries .. B939*
Yatren; Preparation of a solution of emetine and ——. (P) Behringwerke A.-G. .. B355
Yeast; Action of nitrous acid upon antineuritic substance in ——. Peters .. B964
Adenine hexoside from ——. Levene .. B535
Allelocatalysis, and the growth of ——. Peskett .. B958
Assimilation and excretion of ammoniacal nitrogen by ——. Fernbach and Triandfil .. B438
Carbohydrate and fat metabolism in ——. Maclean and Hoffert .. B192
catalase. *See under* Catalase.
cell; Moisture content of ——. Beetlestone .. B1024
cells; Counting —— in dough. Turley .. B993
cells; Exchanges between —— and the medium during and after alcoholic fermentation. Traindfil .. B725
Clarifying and purifying molasses for manufacture of compressed ——. (P) Batist and others .. B486
compositions; Manufacture of ——. (P) Kushiro .. B193
compound; Manufacture of ——. (P) Allen, and Yeastole Co. B273
cultures; Production of zymase in —— not in themselves suitable for fermentation purposes. (P) Verein der Spiritusfabrikanten in Deutschland .. B487
Dietary properties of ——. Nelson and others .. B71
Dried ——. Sobotka .. B610
Effect of ammonium chloride upon growth of —— in beer wort. ·· ·lner and others .. B922
Effect of nitrates on ——. Nicolau .. B1025
fat. Armstrong and Allan .. 214T
Fermentation co-enzyme (co-zymase) of ——. Von Euler and Myrbäck .. B147, B724, B761
fermentation. *See under* Fermentation.
Flocculation of —— and influence of pure culture thereon. Geys .. B146
Growing of ——. (P) Stagner, and National Retarder Co. .. B147
Growth of —— on a medium of wholly synthetic origin. Fulmer and others .. B69
growth-promoting vitamin tested for its effects on animals. Deas .. B844
Inactivation of invertase in fresh —— by silver nitrate. Von Euler and Walles .. B347
Influence of certain chemicals on rate of reproduction of —— in wort. Clark .. B395
Influence of nitrates on ——. Fernbach and Nicolau .. B610
Influence of oxygen on assimilatory and dissimilatory activity of ——. Behaviour of added alcohol in a yeast suspension. Lundin .. B109
Influence of oxygen on assimilatory and dissimilatory activity of ——. Behaviour of certain organic acids. Lundin .. B109
invertase. *See under* Invertase.
maltase. *See under* Maltase.
Manufacture of ——:
(P) Corby and others .. B69
(P) Henneberg .. B147
(P) Jensen .. B29*
(P) Kohman and others .. B69
(P) Pollak .. B687
(P) Wohl, and Fleischmann Co. .. B70*
Manufacture of alcohol and ——. (P) Klein .. B273
Manufacture of food products from ——. (P) Pink, and Continental Industrie Verwertung .. B230*
Manufacture of pressed ——. (P) Klein .. B650
Manufacture of —— from raw potatoes. (P) Peter .. B29
New type of change of acetaldehyde by fermenting ——. Neuberg and Reinfurth .. B191

Yeast—*continued*.
nucleic acid. *See under* Nucleic acid.
Preliminary treatment of molasses for use in manufacture of ——. (P) Hamburger and Kaesz .. B844
Preparation of an anti-diabetic hormone from ——. Hutchinson and others .. B197
Preparation for cultivating ——. Pollak .. B273
Preparation of stable liquid autolysed ——. (P) Allyn, and Vitamin Food Co. .. B487
Production of a concentrated fodder, having a high content of vitamins and enzymes, from ——. (P) Bayer und Co. .. B651
protein as antigen. Lüers and Ottensooser .. B843
Reduction of cyclohexane derivatives by ——. Akamatsu .. B28
resistant to free sulphurous acid. Osterwalder .. B648
Rôle of co-zymase of —— in fermentation. Von Euler and Myrbäck .. B958
solutions; Clarification of —— with normal lead acetate. Reynolds .. B649
stimulant; Manufacture of —— for bread making. (P) Takamine, jun., and others .. B489
Vitamin solution from ——. (P) Harris .. B112
Yeasts; Dissemination of —— in vineyards by insects. Sergent and Rongeblef .. B307
Formation of pyruvic acid and alcohol from calcium lactate by ——. Kayser .. B725
Wine ——. Kayser and Delaval .. B762
Yohimbé bark; Alkaloids of ——. Duckworth and Lay .. B691
Yohimbic acid; Esterification of ——. Field .. B150
Yohimbine. Field .. B150
-papaverine tartrate; Preparation of ——. (P) Fleischer and Hirsch-Tabor .. B314
Preparation of double salts of methylhydrastimide and ——. (P) Fleischer and Hirsch-Tabor .. B314
Young memorial lecture. Production of different grades of gas. Parker .. B856
Yttrium; Separation of —— from other elements of gadolinite. Rolla and others .. B979
Yuccaceæ; Preparation of fibres from ——. (P) Chem. Fabr. Griesheim-Elektron .. B415

Z

Zein; Relation between composition of —— and its acid and basic properties. Cohn and others .. B961
Zeolites; Chemical exchange reactions of ——. Frankforter and Jensen .. B652
Manufacture of ——. (P) Hughes and others .. B133
Regenerating spent —— which have been used for softening water (P) Kriegsheim, and Permutit Co. .. B351
Zinc; Accuracy of potentiometric titration of —— with ferrocyanide. Kolthoff and Verzyl .. B236
Activities of cadmium, tin, lead, bismuth, and —— in their binary liquid mixtures. Taylor .. B137
alloys. (P) De Golyer .. B523
alloys containing copper or nickel; Improving the surface of articles constructed of ——. (P) Fertigguss Ges. .. B638
alloys; Determination of magnesium in ——. Feikenheuer and Konarsky .. B791
and its alloys with mercury; Corrosion resistance of electroplated coatings of ——. Wernlund .. B560
-aluminium alloys. Tanabe .. B872
-aluminium alloys containing cadmium; Mechanical properties of ——. Budgen .. 278T, B791
-aluminium alloys; Properties of ——. Bauer and Heidenhain B635
-aluminium alloys; Shrinkage of ——. Bauer and Heidenhain B520
-aluminium-cadmium alloys. Budgen .. B873
-amalgam; Use of liquid —— in volumetric analysis. Someya B968
-antimony-lead alloys. (P) Doeblin .. B388
-bearing materials; Preventing formation of "tutty" during smelting of —— in the blast furnace. (P) Gelsenkirchener Bergwerks-A.-G., Abt. Schalke .. B793
blende; Desulphurising ——. (P) A.-G. für Bergbau, Blei- und Zinkfabr. zu Stolberg .. B679
-cadmium alloys; Vapour pressure of ——. Egerton and Raleigh .. B99
-coated metal. (P) Crapo, and Indiana Steel and Wire Co. B752
coats plated on iron and steel; Intermittent immersion test as an aid in evaluation of ——. Farnsworth and Hocker .. B471
Condensing chambers for electrothermic production of ——. (P) Juretzka, and Elektrothermische Metallges. .. B301
Contamination of beverages and other foods by ——. Gale and Badger .. B273
Converting zinc powder into fluid ——. (P) Berglund .. B876
-copper alloys which expand on solidification. Iokibe .. B297
-copper ores; Treatment of ——. (P) Greenawalt .. B950
Corrosion of —— in sea-water. Bengough and May .. B833
Detection of —— by means of pyridine. Kolthoff and Hamer B968
Determination of —— in ores by titration. Beyne .. B1016
Determination of —— in wine. Seiler .. B486
Diffusion and solution of —— in copper. Bauer and Piwowarsky .. B59
Distillation of ——. (P) Koppers, and Koppers Development Corp. .. B475
Distillation of —— from complex zinc-lead-silver ores. O'Harra and Wheeler .. B386
Effect of reduced pressure on rate of corrosion of amalgamated —— in acid and in alkali solutions. Greene and Watts B1016

PAGE

Zinc—*continued.*
Electrodeposition of —— from ammoniacal carbonate solution. Campbell .. B834
Electrolytic —— from complex ores. Tainton and Leyson B386
Electrolytic precipitation of —— from alkaline solutions and its application to rapid separation of zinc from other metals. Brelsch .. B695
Electrolytic recovery of ——:
(P) Electrolytic Zinc Co. of Australasia .. B679
Engelhardt .. B636
-electroplated articles. (P) Haas, jun., and Roessler and Hasslacher Chemical Co. .. B837
Electrothermic production of ——. (P) Tharaldsen B262, B752
Extraction of ——. (P) Johansson and others .. B600
flotation concentrate; Roasting furnace for ——. Fulton and Read .. B1016
furnaces; Muffle for ——. (P) Metallwerke Unterweser A.-G. B340
furnaces; Operation of ——. (P) Koppers, and Koppers Development Corp. .. B562*
Hydrogen overvoltage of ——. Westrip .. B837
Importance of —— in nutrition of animals. Bertrand and Benzon .. B572
-lead-cadmium system. Cook .. B337
-lead sulphide ores, mattes, and the like; Treatment of ——. (P) Ashcroft .. B262, B637
Manufacture of ——. (P) Dunford and Elliott (Sheffield), Ltd., and Pehrson .. B601
Method of electrolysis for recovery of —— from its ores. (P) Tainton .. B562
Microchemical detection of —— as double pyridine compounds. Kolthoff and Hamer .. B969
Micro-electrolytic determination of silver and ——. Neumann-Spallart .. B969
ores; Assay of ——. Use of powdered magnesium for removing copper and lead. Ardagh and Bongard .. B386
ores containing cadmium; Analysis of ——. Melgen and Scharschmidt .. B677
ores; Determination of cadmium in ——. Barrs 77T, B520
ores; Effect of oxygen-enriched air in roasting ——. O'Harra and others .. B385
ores; Hydrometallurgical treatment of ——. (P) Elton and others .. B100
ores and metallurgical products; Treatment of ——. (P) Electrolytic Zinc Co. of Australasia .. B679
ores; Preparation of pure zinc sulphate solutions from ——. (P) Laist and others .. B638
ores; Reduction of ——. (P) Schnabel .. B914
plating on copper. (P) Schlotter .. B301
powder; Apparatus for producing ——. (P) Wennergren and others .. B950
powder or dust; Production of ——. (P) Newell and others B638
powder; Heating elements for electric rotating resistance furnaces for treating ——. (P) Finspongs Metallverks Aktiebolag .. B752
Preparation of chemically pure ——. Drescher .. B178
Preparation of —— by electrolysis of sulphate solutions. Fedotieff and Stender .. B18
Production of —— in reverberatory furnaces. (P) Meiner B181
Quantitative separation of very small quantities of copper, nickel, cobalt, and —— from a complex mixture. Bertrand and Mokragnatz .. B79
Recovery of ——. (P) Koppers, and Koppers Development Corp. .. B562*
Recovery of —— in finely divided form. (P) Schmidt, and International Precipitation Co. .. B1018
Recovery of —— from ores. (P) Roitzheim .. B679
Recovery of —— from ores by electrolysis. Palmær and Wejnarth .. B178
Recovery of —— in the separation of copper from copper-zinc alloys. (P) Andreas .. B950
reduction; Utilisation of waste gases from electrothermic process of ——. (P) Juretzka, and Elektrotherm. Metallges. .. B793
Relative corrosion of lead and —— in solutions of inorganic salts. Friend and Tidmus .. B337
Removal of —— from zinciferous materials by blast roasting. (P) Juretzka, and Elektrothermische Metallges. .. B752
retorts; Mechanism of reduction in ——. Bodenstein and Windelband .. B677
-rich alloys, especially for die- and chill-castings. (P) Fertigguss Ges. .. B561
Separation of cadmium from ——. Chalupny and Breisch B580
Separation of —— from iron and aluminium. Ardagh and Bongard .. B404
Separation of iron, copper, nickel, arsenic, and —— by precipitation with calcium carbonate and hydroxide. Schopper .. B178
smelters; Reheating kiln for ——. (P) Schoenaerts .. B638

PAGE

Zinc—*continued.*
smelting; Manufacture of retorts for ——. (P) Ruck and Lehano .. B340*
sulphide ores; Treatment of ——:
(P) Petersson and Field .. B20
(P) Taylor and others .. B429
-tin-copper alloys. Tammann and Hansen .. B871
Titration of —— by ferrocyanides of different metals. Kolthoff and Verzyl .. B539
Treating materials containing lead and ——. (P) Berglund B914
Treatment of oxidised ores or other oxidised compounds of copper and ——. (P) Edwards and Durant .. B601
Use of molybdenum as indicator in volumetric determination of ——. Fernandes .. B893
Utility of potentiometric titration of —— with ferrocyanide. Verzyl and Kolthoff .. B539
Vacuum refining of ——. (P) Wetzel .. B984
vapour produced by electrothermal processes; Condensation of ——. (P) Juretzka, and Elektrothermische Metallges. B389
Zinc ammonium phosphate; Alkalimetry of ——. Springer .. B854
Zinc arsenite; Rapid determination of water-soluble arsenic in ——. Roark .. B631
Zinc carbonate solutions; Electrolysis of ammoniacal ——. Campbell B834
Zinc chloride; Catalytic effects of ——. Norris .. B277
Manufacture of ——. (P) Rosenstein, and Great Western Electro Chemical Co. .. B420
salt of aniline; Antiseptic action of ——. Howard and Stimpert .. B150
solutions; Evaporation of —— in iron vessels (P) Rosenstein, and Great Western Electro Chemical Co. .. B558
Zinc hydroxide; Ageing of ——. Fricke and Ahrndts .. B745
Zinc oxide; Electric furnace and precipitator for producing ——. (P) Thomson and Fitzgerald .. B787
Furnace for production of ——. (P) Ross .. B379
Manufacture of ——. (P) New Jersey Zinc Co. .. B787
Mechanism of reduction of ——. D'Hooghe .. B260
Mechanism of reduction of —— in the retorts. Bodenstein and Windelband .. B677
and zinc-lead oxide pigments; Manufacture of —— from complex ores. Hall .. B338
Zinc silicate melts; Production of ——. (P) Rupprecht .. B293
Zinc sulphate; Catalytic dehydration and dehydrogenation by means of anhydrous ——. Brus .. B74
solutions; Preparation of pure —— from ores. (P) Laist and others .. B638
Zinc sulphide; Active agents in luminescent ——. Tanaka .. B595
Chloridising roasting of ——. Seillen .. B834
for fluorescent screens for X-rays (P) Lilienfeld and Jahoda B908
Manufacture of ——. (P) Comp. Gen. des Prod. Chim. de Louvres .. B980
Manufacture of phosphorescent ——. (P) "Alchemia" Allgem. Chem. Ind. A.-G., and Jahoda.. B1019
Manufacture of pure —— from solutions containing metals of the iron group. (P) Ephraim .. B294
Method of adjusting the acidity before precipitation of —— from faintly acid sulphate solutions. Hackl .. B580
Zinc white; Manufacture of ——. (P) "Berzelius" Metallhütten-A.-G. .. B392
Zincates; Alkali ——. Fricke and Ahrndts .. B745
Zircon; Action of high temperatures on ——. Matignon .. B93
Zirconia Effect of —— in enamels for sheet steel. Wolfram .. B218
Plastic masses with ——. Ruff and Moczala .. B748
See also Zirconium oxide
Zirconium in alloy steels. Vogel .. 367T
Analytical methods for ——. Moore and others .. B620*
Colour reaction for ——. De Boer .. B852
Detection of —— in presence of titanium. Bellucci and Savoia .. B580
Effect of —— on hot-rolling properties of high-sulphur steels and occurrence of zirconium sulphide. Feild .. B470, B715
and related elements; Microchemical reactions of ——. Steidler .. B969
Separating hafnium and ——. (P) N. V. Philips' Gloeilampenfabr. .. B869
-steel. *See under* Steel.
Zirconium compounds for opacifying enamels. (P) Cooper, and Kenet Laboratories Co. .. B830
Zirconium dioxide; Reduction of ——. Ruff and Brintzinger .. B55
Zirconium oxide concentrate; Production of a ——. (P) Kluzle, and Titanium Alloy Manuf. Co. .. B672
See also Zirconia.
Zirkite; Action of high temperatures on ——. Matignon .. B93
Zizania aquatica; Nutritive properties of ——. Kennedy .. B488

List of Patents Abstracted.

List of Journals Abstracted, with Abbreviations Used, and Addresses of Publishers and Prices.

Journal.	Abbreviation.	Address of Publisher and Price.*
Agricultural Journal of India ..	Agric. J. India	W. Thacker and Co., 2, Creed Lane, London. 2s.
Agricultural Research Institute, Pusa, Reports and Bulletins	Rep. (Bull.) Agric. Res. Inst. Pusa	Supt. Govt. Printing, Calcutta. Price varies.
Allgemeine Zeitschrift für Bierbrauerei und Malzfabrikation	Allgem. Z. Bierbrau. ..	Michaelerstrasse 25, Vienna XVIII/1. $4 per annum.
American Journal of Pharmacy..	Amer. J. Pharm. ..	145, North Tenth Street, Philadelphia, Pa., U.S.A. 50 cents.
American Journal of Science ..	Amer. J. Sci.	New Haven, Conn., U.S.A. 50 cents.
Anales de la Asociación Quimica Argentina	Anal. Asoc. Quim. Argentina	Av. de Mayo, 1157, Buenos Aires. 60 c.
Anales de la Sociedad Española de Física y Química	Anal. Fis. Quim. ..	D. M. T. Gil Garcia, Corredera Baja de San Pablo, 59, Madrid. 20 pesetas per annum.
Analyst	Analyst	W. Heffer and Sons, Ltd., 4, Petty Cury, Cambridge. 3s.
Annalen der Chemie	Annalen	Verlag Chemie, Leipzig, Germany. $1.60 per vol.
Annalen der Physik	Ann. Physik	J. A. Barth, Leipzig. R.M. 20 per vol.
Annales de Chimie	Ann. Chim.	Masson et Cie., 120, Boulevard St. Germain, Paris, VIe. 45 fr. per annum.
Annales de Chimie Analytique ..	Ann. Chim. Analyt. ..	M. Crinon, 20, Boulevard Richard-Lenoir, Paris, 11e. 2 fr.
Annales des Falsifications ..	Ann. Falsif.	M. Filaudeau, 42 bis, Rue de Bourgogne, Paris, VIIe. 4 fr.
Annales de l'Institute Pasteur ..	Ann. Inst. Pasteur ..	Masson et Cie, 120, Boulevard St. Germain, Paris, 6e. 5 fr.
Annales de Physique	Ann. Physique	Masson et Cie, 120, Boulevard St. Germain, Paris, VIe. 45 fr. per annum.
Annales de la Science Agronomique Française et Étrangère	Ann. Sci. Agron. ..	Librairie Berger-Levrault, 136, Boulevard St. Germain, Paris, 6e. 5.25 fr.
Annali di Chimica Applicata ..	Annali Chim. Appl. ..	Via Quattro Novembre, 154, Rome, (1). L. 15.
Annali della R. Stazione Chimico Agraria Sperimentale di Roma	Ann. R. Staz. Chim. Agrar. Sperim. Roma	R. Stazione Chimico-Agraria Sperimentale di Roma, Rome.
Apotheker-Zeitung	Apoth.-Ztg.	Levetzowstrasse 16b, Berlin, N.W. 87.
Archief voor de Suikerindustrie..	Arch. Suikerind. ..	Suikersyndicaat te Soerabaja, Netherlands E. Indies.
Archiv für Experimentelle Pathologie und Pharmakologie	Arch. expt. Path. Pharm.	Verlag von F. C. W. Vogel, Leipzig. 26s. 6d. per vol.
Archiv der Pharmazie	Arch. Pharm.	Verlag Chemie, Berlin, Germany. $4 per annum.
Archives des Sciences Physiques et Naturelles	Arch. Sci. phys. nat. ..	Rue de Vieux-College, 4, Geneva, Switzerland. 6 fr.
Archivio di Farmacologia sperimentale e scienze affini	Arch. Farm. sperim. ..	Via Depretis, 92, Rome. Lire 4.
Atti della Reale Accademia Nazionale dei Lincei, Roma	Atti R. Accad. Lincei Roma	Tipografia della R. Accademia Nazionale dei Lincei, Rome. Lire 108 per annum.
Berichte der Deutschen Chemischen Gesellschaft	Ber.	Verlag Chemie, Leipzig, Germany. $15 per annum.
Berichte der Deutschen Pharmazentischen Gesellschaft	Ber. deuts. Pharm. Ges.	Incorporated with Archiv der Pharmazie.
Berichte des Ohara Instituts für landwirtschaftliche Forschungen	Ber. Ohara Inst. landw. Forsch.	Verlag der Ohara Schonokai, Kuraschiki Provinz Okayama. Price varies.
Biedermann's Zentralblatt für Agrikulturchemie	Bied. Zentr.	O. Leiner, Konigstrasse 26B, Leipzig, Germany. M. 24 per annum.
Biochemical Journal	Biochem. J.	Cambridge University Press, Fetter Lane, London, E.C. 15s.
Biochemische Zeitschrift ..	Biochem Z.	Verlag von J. Springer, Berlin, W. 9, Linkstrasse 23-24.
Bolletino Chimico-Farmaceutico	Boll. Chim. farm. ..	Via Cappuccio, 19, Milan, Italy. L. 1.80.
Brennstoff-Chemie	Brennstoff-Chem. ..	Verlag W. Girardet, Essen. G.M. 1.5.
Brewers' Journal..	Brewers' J.	L. M. Reed, Eastcheap Buildings, Eastcheap, London, E.C. 3. 3s.
British Journal of Photography..	Brit. J. Phot.	24, Wellington Street, London, W.C. 2. 3d.
Buletinul Societátei de Chimie din România	Bul. Soc. Chim. România	Boulevard Carol, 16, Bucarest.
Bulletin de l'Academie Royale de Belgique, Classe des Sciences	Bull. Acad. roy. Belg., Cl. Sci.	M. Lambertin, Rue Coudenberg, 58-62, Brussels.
Bulletin de l'Association des Chimistes de Sucrerie et de Distillerie	Bull. Assoc. Chim. Sucr.	156, Boulevard Magenta, Paris, 10e. 4 fr.
Bulletin of the Bureau of Bio-Technology	Bull. Bureau Bio-Technol.	Murphy and Son, Ltd., Sheen Lane, Mortlake, London, S.W. 14. 7s. 6d. per annum.

* The price for single copies is given where these are sold separately. In other cases it is only possible to buy the Journals in question in complete volumes.

JOURNAL.	ABBREVIATION.	ADDRESS OF PUBLISHER AND PRICE.
Bulletin de la Fédération des Industries Chimiques de Belgique	Bull. Fed. Ind. chim. Belg.	65, Rue du Canal, Brussels. 45 fr. per annum.
Bulletin of the Forest Experiment Station, Meguro, Tokyo	Bull. Forest Exp. Stat. Meguro	Bureau of Forestry, Dept. of Agriculture and Commerce, Tokyo.
Bulletin of the Institution of Mining and Metallurgy	Bull. Inst. Min. Met.	Cleveland House, 225, City Road, London, E.C. 1.
Bulletin of the Kentucky Agricultural Experiment Station	Bull. Kentucky Agric. Exp. Stat.	University of Kentucky, Lexington, Ky., U.S.A.
Bulletin of the Rubber Growers' Association (Incorporated)	Bull. Rubber Growers' Assoc.	2–4, Idol Lane, Eastcheap, London, E.C. 3.
Bulletin of the School of Mines and Metallurgy, University of Missouri	Bull. School Mines and Met. Missouri	Director of Mining Experiment Station, Rolla, Mo., U.S.A.
Bulletin de la Société de Chimie Biologique	Bull. Soc. Chim. biol. ..	Masson et Cie, 120, Boulevard St. Germain, Paris (VIe). 6 fr.
Bulletin de la Société Chimique de Belgique	Bull. Soc. chim. Belg. ..	M. J. Wauters, Palais du Midi (Galerie du Travail 7), Brussels.
Bulletin de la Société Chimique de France	Bull. Soc. chim. ..	Masson et Cie., 120, Boulevard Saint-Germain, Paris, 6e. 120 fr. per annum.
Bulletin de la Société d'Encouragement pour l'Industrie Nationale	Bull. Soc. d'Encour. ..	Secrétariat, Rue de Rennes, 44, Paris, 6e., France. 36 fr. per annum.
Bulletin de la Société Française de Photographie	Bull. Soc. Franç. Phot. ..	51, Rue de Clichy, Paris, 9e. 2 fr.
Bulletin de la Société Industrielle de Mulhouse	Bull. Soc. Ind. Mulhouse	Berger-Levrault et Cie., 5, Rue des Beaux-Arts, Paris. 60 fr. per annum.
Canadian Chemistry and Metallurgy	Canad. Chem. Met. ..	Westman Press, Ltd., 57, Queen Street West, Toronto. 40 cents.
Le Caoutchouc et la Gutta-Percha	Caoutchouc et Gutta-Percha	A. D. Cillard fils, 49, Rue des Vinaigriers, Paris, X. 40 fr. per annum.
Cellulosechemie	Cellulosechem.	Supplement to Papierfabrikant.
Centralblatt für Bakteriologie, Parasitenkunde, und Infektionskrankheiten	Centr. Bakt.	Verlag von G. Fischer, Jena, Germany.
Cereal Chemistry	Cereal Chem.	University Farm, St. Paul, Minn., U.S.A. $3.50 per annum.
Chemical Age	Chem. Age	Benn Bros., Ltd., 8, Bouverie Street, London, E.C. 4. 6d.
Chemical and Metallurgical Engineering	Chem. Met. Eng. ..	McGraw-Hill Co., 10th Avenue at 36th Street, New York. 25 cents.
Chemical News	Chem. News	Merton House, Salisbury Square, London, E.C. 4. 6½d.
Chemical Trade Journal	Chem. Trade J. ..	Davis Bros., Danes Inn House, 265, Strand, London, W.C. 6d.
Chemické Listy pro védu a prumysl	Chem. Listy	Tiskem. Ed. Beaufortа, V. Praze II., Jungmannova ul., 21., Czechoslovakia.
Chemiker-Zeitung	Chem.-Ztg.	Dr. W. Roth, Cöthen, Anhalt, Germany. R.M. 11 per quarter.
Chemisch Weekblad	Chem. Weekblad ..	D. B. Centen, O.Z. Voorburgwal 115, Amsterdam. 0.25 fr.
Chemische Umschau auf dem Gebiete der Fette, Oele, Wachse, und Harze	Chem. Umschau ..	Verlag der Wissenschaftlichen Verlagsges., Stuttgart.
Chemisches Zentralblatt	Chem. Zentr.	Verlag Chemie Ges., Berlin, Germany. $20 per annum.
Chimie et Industrie	Chim. et Ind.	49, Rue des Mathurins, Paris. 12 fr.
Collegium	Collegium	R. Würtenberger, Ober-Ramstadt, bei Darmstadt, Germany. R.M. 24 per annum.
Communications of the Netherlands Government Institute for advising the Rubber Trade and Rubber Industry	Comm. Netherlands Govt. Inst. for advising Rubber Trade	
Comptes-Rendus hebdomadaires des Séances de l'Académie des Sciences	Compt. rend.	Imprimerie Gauthier-Villars, Quai des Grands-Augustins, 55, Paris. 140 fr. per annum.
Comptes-Rendus des Travaux du Laboratoire Carlsberg	Comptes rend. Trav. Lab. Carlsberg	H. Hagerup, Copenhagen. Price varies.
Deutsche Zuckerindustrie ..	Deuts. Zuckerind. ..	Dessauerstrasse, 18, Berlin, S.W. 11. G.M. 32 per annum.
Engineering	Engineering	C. R. Johnson, 35 and 36, Bedford Street, Strand, London, W.C. 2. 1s. 2½d.
Engineering News-Record ..	Eng. News-Rec. ..	McGraw-Hill Co., Tenth Avenue at 36th Street, New York. 25 cents.
Farben-Zeitung	Farben-Ztg.	Krausenstrasse 35–36, Berlin, S.W. 19. G.M. 6.50 per quarter.
Fermentforschung	Fermentforsch.	Verlag von Urban u. Schwarzenberg, Berlin, Germany.
Feuerungstechnik	Feuerungstechn. ..	O. Spamer, Heinrichstrasse, 9, Leipzig-R., Germany. G.M. 4 per quarter.
Fuel Research Board Technical Papers	Fuel Res. Bd. Tech. Paper	H.M. Stationery Office, Kingsway, London, W.C. 2. Price varies.
Fuel in Science and Practice ..	Fuel	Colliery Guardian Co., Ltd., 30–31, Furnival Street, London, E.C. 4. 1s.
Gas Journal	Gas J.	W. King, 11, Bolt Court, Fleet Street, London, E.C. 4. 1s.
Gas- und Wasserfach	Gas- u. Wasserfach ..	R. Oldenbourg, Glückstrasse, 8, Munich. G.M. 25 per annum.

Journal.	Abbreviation.	Address of Publisher and Price.
Gas World	Gas World	8, Bouvorie Street, E.C. 4. 8d.
Gazzetta Chimica Italiana ..	Gazzetta	La Direzione della "Gazzetta Chimica," Via Quattro Novembre, 154, Rome. Lire 20.
Gesammelte Abhandlungen zur Kenntnis der Kohle	Ges. Abhandl. Kenntn. Kohle	Gebr. Borntraeger, Schöneberger Ufer, 12a, Berlin, W. 35.
Giornale di Chimica Industriale ed Applicata	Giorn. Chim. Ind. Appl.	Via S. Paolo, 10, Milan, Italy. L.10.
Glass Industry	Glass Ind.	50, Church Street, New York. 20 cents.
Gummi-Zeitung	Gummi-Ztg.	Geschäftsstelle der "Gummi-Zeitung," Krausenstrasse 35 36. Berlin, S.W. 19, Germany. G.M. 6·50 per quarter.
Helvetica Chimica Acta ..	Helv. Chim. Acta ..	Georg & Co., 10, Freiestrasse, Basel. 10 fr.
Imperial Institute Bulletin ..	Bull. Imp. Inst. ..	John Murray, Albemarle Street, London, W. 3s. 6d.
India-Rubber Journal	India-Rubber J. ..	Maclaren & Sons, 37 and 38, ShoeLane, London, E.C. 4d.
Industrial and Engineering Chemistry	Ind. Eng. Chem. ..	C. L. Parsons, 1709, G. Street, N.W., Washington, D.C., U.S.A. 75 cents.
International Review of Science and Practice of Agriculture	Int. Rev. Sci. Agric. ..	International Institute of Agriculture, Rome. 15s.per annum.
International Sugar Journal ..	Int. Sugar J.	2, St. Dunstan's Hill, London, E.C. 1s. 9d.
Journal of Agricultural Research	J. Agric. Res.	Superintendent of Documents, Govt. Printing Office, Washington, D.C., U.S.A. Price varies.
Journal of Agricultural Science ..	J. Agric. Sci.	University Press, Cambridge. 10s.
Journal of the American Ceramic Society	J. Amer. Ceram. Soc. ..	211, Church Street, Easton, Pa., U.S.A. 75 cents.
Journal of the American Chemical Society	J. Amer. Chem. Soc. ..	C. L. Parsons, 1709, G. Street, N.W., Washington, D.C., U.S.A. 75 cents.
Journal of the American Leather Chemists' Association	J. Amer. Leather Chem. Assoc.	American Leather Chemists' Assoc., Easton. Pa., U.S.A. $12 per annum.
Journal of the American Water Works Association	J. Amer. Water Works Assoc.	Mount Royal and Guilford Avenues, Baltimore, Md., U.S.A. $7 per annum.
Journal of the Association of Official Agricultural Chemists	J. Assoc. Off. Agric. Chem.	Box 290, Pennsylvania Avenue Station, Washington, D.C., U.S.A. 27s. per volume.
Journal of Biological Chemistry ..	J. Biol. Chem.	Rockefeller Inst. for Medical Research, Mount Royal and Guilford Avenues, Baltimore, Md., U.S.A. $5.25 per volume.
Journal of the Chemical Society of London, Transactions	Chem. Soc. Trans. ..	Gurney and Jackson, 33, Paternoster Row, London, E.C. 7s. 6d.
Journal of the Chemical, Metallurgical, and Mining Society of South Africa	J. Chem. Met. Soc. S. Africa	Scientific and Technical Club, 100, Fox Street, Johannesburg. 3s. 6d.
Journal de Chimie Physique ..	J. Chim. physique ..	Gauthier-Villars, 55, Quai des Grands-Augustins, Paris, 80 fr. per annum: the price of a single copy varies according to the size.
Journal of the College of Agriculture, Tokyo Imperial University, Japan	J. Coll. Agric. Tokyo ..	Director of the College of Agriculture, Tokyo Imperial University, Japan. Price varies.
Journal of the College of Science, Imperial University of Tokyo	J. Coll. Sci., Tokyo ..	Director of the College of Science, Tokyo Imperial University, Japan. Price varies.
Journal of Dairy Science ..	J. Dairy Sci.	Williams and Wilkins Co., Mount Royal and Guilford Avenues, Baltimore, Md., U.S.A. $1.25.
Journal of the Faculty of Engineering, Tokyo Imperial University	J. Fac. Eng. Tokyo ..	Maruzen and Co., Ltd., Tore Sanchome, Nihonbashiku, Tokyo.
Journal of the Franklin Institute	J. Franklin Inst. ..	The Actuary, The Franklin Institute, Philadelphia, Pa., U.S.A. 60 cents.
Journal of General Physiology ..	J. Gen. Physiol. ..	Rockefeller Institute for Medical Research, Mount Royal and Guilford Avenues, Baltimore, Md., U.S.A. $1.
Journal of the Indian Institute of Science	J. Indian Inst. Sci. ..	Indian Institute of Science, Bangalore. Price varies.
Journal of the Institute of Brewing	J. Inst. Brewing ..	Harrison and Sons, 44, St. Martin's Lane, London, W.C. 2. 4s.
Journal of the Institution of Electrical Engineers	J. Inst. Elect. Eng. ..	Savoy Place, Victoria Embankment, London, W.C. 2. 10s. 6d.
Journal of the Institution of Petroleum Technologists	J. Inst. Petrol. Tech. ..	The Institution, Aldine House, Bedford Street, Strand, W.C. 2. 7s. 6d.
Journal für Landwirtschaft ..	J. Landwirts.	P. Parey, Hedemannstrasse 10 u. 11, Berlin, S.W. 11.
Journal of the Optical Society of America	J. Opt. Soc. Amer. ..	J. B. Lippincott Co., Philadelphia.
Journal de Pharmacie et de Chimie	J. Pharm. Chim. ..	O. Doin et fils, Place de l'Odeon, 8, Paris. 1.75 fr.
Journal of Pharmacology and Experimental Therapeutics	J. Pharm. Exp. Ther. ..	Williams and Wilkins Co., Mount Royal and Guilford Avenues, Baltimore, Md., U.S.A. $6.5 per vol.
Journal of Physical Chemistry ..	J. Physical Chem. ..	Baker Laboratory, Ithaca, N.Y., U.S.A. $10 per annum ($8 to members of the Amer. Chem. Soc., Chemical Soc., and Faraday Soc.).
Journal für praktische Chemie ..	J. pr. Chem.	J. A. Barth, Salomonstrasse, 18 b, Leipzig, Germany. R.M. 16 per vol.

Journal.	Abbreviation.	Address of Publisher and Price.
Journal and Proceedings of the Royal Society of New South Wales	J. Proc. Roy. Soc. N.S.W.	5, Elizabeth Street, Sydney, N.S.W. 21s. per vol.
Journal of the Royal Society of Arts	J. Soc. Arts	G. Bell and Sons, York House, Portugal Street, London, W.C. 2. 1s.
Journal of Scientific Instruments	J. Sci. Instrum. ..	Cambridge University Press, Fetter Lane, London, E.C.4. 2s. 6d.
Journal of the Society of Dyers and Colourists	J. Soc. Dyers and Col. ..	Pearl Assurance Buildings, Market Street, Bradford, Yorks. 5s.
Journal of the Society of Glass Technology	J. Soc. Glass Technol. ..	S. English, Darnall Road, Sheffield. 10s. 6d.
Journal of the Society of Leather Trades' Chemists	J. Soc. Leather Trades' Chem.	W. R. Atkin, M.Sc., The University, Leeds. 2s. 6d.
Journal of the South African Association of Analytical Chemists	J. S. Afr. Assoc. Anal. Chem.	Box 5254, Johannesburg. 2s. 6d.
Journal of the Textile Institute..	J. Text. Inst.	J. D. Athey, 16, St. Mary's Parsonage, Manchester. 3s.
Journal of the Washington Academy of Sciences	J. Wash. Acad. Sci. ..	R. L. Faris, Coast and Geodetic Survey, Washington, D.C., U.S.A. 25 cents ; 50 cents for July, Aug. and Sept. numbers.
Keramische Rundschau ..	Keram. Runds.	Dreyestrasse, 4, Berlin, N.W. 21.
Kogyo-Kwagaku-Zasshi (Journal of Chemical Industry, Japan)	Kogyo-Kwagaku-Zasshi (J. Chem. Ind. Japan)	Kogyo-Kwagaku-Kwai, Iidamachi, Kojimachi-ku, Tokyo. 5 yen (10s. 3d.) per annum.
Kolloidchemische Beihefte ..	Kolloidchem. Beihefte ..	T. Steinkopff, Residenzstrasse 12B., Dresden-Blasewitz, Germany. G.M. 16 per vol.
Kolloid-Zeitschrift	Kolloid-Z.	T. Steinkopff, Residenzstrasse 12B., Dresden-Blasewitz, Germany. R.M. 18 per vol.
Kruppsche Monatshefte ..	Krupp's Monatsh. ..	Verlag F. Krupp A.-G., Essen. G.M. 12 per annum.
Landwirtschaftlichen Versuchs-Stationen, Die	Landw. Vers.-Stat. ..	P. Parey, Hedemannstr. 10 and 11, Berlin, S.W. 11.
Malayan Agricultural Journal ..	Malay. Agric. J. ..	Dept. of Agriculture, Kuala Lumpur, Federated Malay States. 50 cents.
Mededeelingen van het Central Rubberstation	Mededeel. Centr. Rubberstat.	
Melliand's Textilberichte ..	Melliand's Textilber. ..	Mannheim. 35s. per annum.
Memoires et Compte Rendu des Travaux de la Société des Ingénieurs Civils de France	Mem. Compt. rend Soc. Ing. Civils de France	19, Rue Blanche, Paris. 60 fr. per annum.
Memoirs of the College of Science and Engineering, Kyoto Imperial University	Mem. Coll. Sci. and Eng. Kyoto	Maruzen Co., Ltd., Tokyo, Japan. Price varies.
Memoirs of the Department of Agriculture in India	Mem. Dept. Agric. India	W. Thacker and Co., 2, Creed Lane, London. Price varies.
Memorial des Poudres	Mem. Poudres	Gauthier-Villars et Cie., 55, Quai des Grands-Augustins, Paris. 35 fr. per vol.
Metall und Erz	Metall u. Erz	W. Knapp, Mühlweg, 19, Halle on Salle, Germany.
Mikrochemie	Mikrochem.	W. Müller, Stiftgasse, 21, Vienna, VII. $2 per annum.
Milchwirtschaftliches Zentralblatt	Milchw. Zentr.	M. and H. Schaper, Hanover. G.M. 3 per quarter.
Mining and Metallurgy ..	Min. and Met.	29, West 39th Street, New York, U.S.A. $1.
Mittheilungen des Institutes für Kohlenvergasung und Nebenproduktengewinnung	Mitt. Inst. Kohlenvergasung	Karl Schweighofergasse, 10, Vienna VII.
Mittheilungen aus dem Materialprüfungsamt zu Berlin-Dahlem	Mitt. Materialprüf. ..	Julius Springer, Linkstrasse 23–24, Berlin, W. 9, Germany. Price varies.
Monatshefte für Chemie und verwandte Teile anderer Wissenschaften	Monatsh.	Hölder-Pichler-Tempsky A.-G., Vienna, Austria. G.M. 12 per annum.
Moniteur Scientifique	Mon. Scit.	Dr. G. Quesneville, 12, rue de Buci, Faubourg St. Germain, Paris. 2 fr. 50.
New Zealand Journal of Science and Technology	N.Z.J. Sci. Technol.	Government Printer, Wellington, N.Z. 2s. 1d.
Nippon Kwagaku Kwai Shi (Journal of the Chemical Society of Japan)	Nippon Kwagaku Kwai Shi (J. Chem. Soc. Japan)	Chemical Society of Japan, College of Science, University of Tokyo, Japan.
Oesterreichische Chemiker-Zeitung	Oesterr. Chem.-Ztg. ..	Pestalozzigasse 6, Vienna, 1. 4500 K.
Paint Manufacturers' Association of the United States, Circulars	U.S. Paint Manuf. Assoc. Circ.	Dr. H. A. Gardner, Institute of Industrial Research, 19th and B. Streets, N.W., Washington, U.S.A.
Paper	Paper	Longacre Building, 1478, Broadway, New York. $5 per annum.
Papier-Fabrikant	Papierfabr.	Otto Elsner, Oranienstr. 140-142, Berlin, S. 42. M.0.60.
Perfumery and Essential Oil Record	Perf. Ess. Oil Rec. ..	6, Serle Street, London, W.C. 1s. 6d.
Petroleum	Petroleum	Verlag für Fachliteratur, Courbièrestrasse, 3, Berlin, W. 62. £3 per vol.
Pharmaceutical Journal ..	Pharm. J.	72, Great Russell Street, London, W.C. 1. 1s. 1d.
Pharmaceutisch Weekblad ..	Pharm. Weekblad ..	D. B. Centen, O.Z. Voorburgwal 115, Amsterdam. 15.50 fr. per annum.

JOURNAL.	ABBREVIATION.	ADDRESS OF PUBLISHER AND PRICE.

List of Errata.

No. of Journal.	Page.	Column.	Line from top.	Line from bottom.	Corrigenda.
No. 1—Jan. 4 ..	B19	1	33	—	*For* " silvering " *read* " desilverising."
No. 2—Jan. 11 ..	B27	1	10	—	*For* " E. J. Martin " *read* " F. J. Martin."
,, ,, ..	B33	1	—	9	*For* " Salaman " *read* " Salomon."
,, ,, ..	B35	2	—	31	*For* " German " *read* " Germann."
No. 3—Jan. 18 ..	B50	2	2	—	*For* " not affected " *read* " markedly decreased."
,, ,, ..	B50	2	3	—	*After* " viscosimeter " *insert* " but in the experiments at 90° a similar effect was not observed."
No. 4—Jan. 25 ..	B74	1	6	—	*For* " Simmonet " *read* " Simonnet."
No. 5—Feb. 1 ..	23T	1	—	7	*For* " oxide " *read* " ethoxide."
,, ,, ..	23T	2	—	12 and 25	*For* " oxide " *read* " ethoxide."
,, ,, ..	24T	1	—	8	*For* " oxide " *read* " ethoxide."
,, ,, ..	B89	2	—	22	*For* " Hägglud " *read* " Hägglund."
,, ,, ..	B95	2	13	—	*For* " 382,083 " *read* " 382,983."
No. 8—Feb. 22 ..	B142	2	—	8–9	*For* " H. Bechhold " *read* " D. Gerngross."
No. 10—Mar. 7 ..	B179	2	23	—	*For* " Mann " *read* " Mann."
No. 11—Mar. 14 ..	B206	2	—	33–34	*For* " Blizzard " *read* " Blizard."
,, ,, ..	B216	1	—	2	*For* " 209,411 " *read* " 209,441."
No. 12—Mar. 21 ..	63–64T	—	—	—	The illustrations given on an inset in the issue for Aug. 29 should be substituted for Figs. 2, 3 and 4.
,, ,, ..	B222	2	10	—	*For* " W. E. Vosburgh " *read* " W. C. Vosburgh."
,, ,, ..	B224	1	—	33	*For* " tanks " *read* " inks."
No. 13—Mar. 28 ..	B254	2	2	—	*For* " Kraub " *read* " Kraut."
No. 14—Apr. 4 ..	82T	2	28	—	*For* " ferric sulphide " *read* " FeS_2."
,, ,, ..	84T	2	15	—	*After* " air-dried " *insert* " and then exposed to air saturated with moisture."
,, ,, ..	85T	1	17	—	*For* " carbon " *read* " coal."
,, ,, ..	85T	1	—	—	In Table IV (B), in the column headings, *for* " O_2 " *read* " CO_2."
,, ,, ..	87T	1	17	—	*For* " four " *read* " three."
,, ,, ..	B270	1	—	10, 11 and 8	*For* " sulphate " *read* " silicate."
,, ,, ..	B274	1	—	22	*For* " purification " *read* panification."
,, ,, ..	B276	1	9	—	*For* " J. Murayama " *read* " Y. Murayama."
,, ,, ..	B278	2	—	9	*For* " Pappochia " *read* " Papocchia."
No. 15—Apr. 11 ..	B283	1	—	19	*For* " Mehan " *read* " Metan."
,, ,, ..	B286	1	—	24	*For* " Rushby " *read* " Rusby."
No. 16—Apr. 18 ..	B305	2	13, 14, 18, 20, 22, and 23, 24	—	*For* " potassium nitrate " *read* " sodium nitrate."
,, ,, ..	B306	1	14	—	*For* " higher aldehydes " *read* " carbohydrates."
,, ,, ..	B315	1	28	—	*For* " Thin . . . bichro- " *read* " Light-sensitive film or layer and process for making it."
No. 18—May 2 ..	B341	1	35	—	*For* " T. H. Levin " *read* " I. H. Levin."
,, ,, ..	B353	2	—	9	*For* " Renne " *read* " Runne."
,, ,, ..	B354	1	18	—	*For* " 4-aminoanthraquinolines " *read* " 4-aminoquinolines."

THE ANALYSIS OF ORGANIC RUBBER VULCANISING ACCELERATORS.*

By T. Callan, M.Sc., Ph.D., and
N. Strafford, B.Sc., A.I.C.

Plinavis. sses. 29,50 introduction of organic accelerators of —Complete many organic compounds which were 14,572 (19 obscure chemical substances merely of 31,444 (19 interest have come into wide commercial n of the h work has been carried out and recorded to the comparative vulcanising powers of various accelerators, but very often only the trade name of the accelerator used is stated, and no clue s given as to its composition, so that it is often lifficult to co-ordinate the results of different workers, particularly as the same chemical substance may occur commercially under various proprietary names. The practice of using accelerators sold under a trade name, without any indication of the class of compound to which they belong or degree of purity, has undoubtedly checked progress in the use of accelerators in the rubber industry. It is therefore very desirable that there should be reliable methods available for the identification and quantitative determination of the many widely different substances used as accelerators, since there is very little published information likely to be of assistance.

It would be impossible to present a scheme which would embrace the whole of the multitudinous substances, both inorganic and organic, which have been proposed or tried as rubber accelerators. Of this considerable number, however, only relatively few are met with commercially, and the object of this paper is to deal with the identification and quantitative analysis of a few of the more widely used organic accelerators. We shall therefore confine ourselves in the present paper to the following: —Sodium phenolate and naphtholate, aldehyde-ammonia, nitroso compounds, the aryl-substituted guanidines and biguanides, thiocarbanilide, the dithiocarbamates and corresponding thiuram disulphides, which includes probably most of the accelerators now used in commercial quantities.

We do not propose to treat of the more familiar substances such as aniline etc. Commercial organic accelerators often contain considerable amounts (up to 90%) of inorganic substances such as calcium, magnesium, and zinc oxides, kaolin, etc., added either as active constituents or merely as diluents, so that a preliminary examination is generally necessary before proceeding to the actual identification or determination of the organic constituent.

* Read at a joint meeting of the Manchester Section and the Manchester Section of the Institution of the Rubber Industry on Dec. 7, 1923.

Preliminary test.

A little of the sample is heated in a porcelain or silica crucible (not platinum). The odour of the evolved vapours is noted; this may be distinctly "aromatic" or "ammoniacal," whilst certain sulphur compounds give a peculiarly unpleasant fœtid odour. If there is any appreciable ash it is generally advisable to examine this prior to proceeding with the examination of the original substance, as the removal of inorganic substances is essential before proceeding with the identification of the organic constituent. In order to effect this a portion of the sample is first successively extracted for a short time only with the following solvents in the order named by boiling under a reflux condenser on a water bath: (1) petroleum ether, b.p. 40°–60°, (2) ether, (3) benzene, (4) alcohol, (5) water. Complete extraction is not to be aimed at, but rather the extraction is to be continued only sufficiently long to allow of the selection of an appropriate solvent for purification of the bulk of the sample.

Petroleum ether often removes traces of tarry and oily impurities and in some cases traces of free sulphur, and this preliminary purification often facilitates subsequent identification. The appropriate solvent having thus been selected, the main bulk of the sample is extracted and the organic constituent recovered from the filtered solution by evaporation.

Having thus obtained a quantity of the organic constituent free from diluents, the first operation should be to determine the presence or absence of nitrogen, sulphur, and metals such as zinc, sodium, etc. Nitrogen and sulphur are best detected by fusing with sodium by the ordinary methods, and other elements tested for by driving off the organic matter by gentle ignition and subsequent examination of the residue by the ordinary methods of qualitative analysis. The results of these tests make it possible to relegate the substances to one or other of the following groups, those members with which the present paper deals being given below: —

(1) *N and S absent.*	Sodium phenolate. Sodium naphtholate.
(2) *N only present.*	Nitroso compounds. Guanidines. Biguanides. Aldehyde-ammonia.
(3) *S only present.*	Thio-acids.
(4) *N and S present.*	Thiocarbanilide and its homologues. Alkyl-ammonium and metallo-dithiocarbamates. Thiuram disulphides.

Group I.—Nitrogen and sulphur absent.

Sodium phenolate and sodium naphtholate. These are readily soluble in water, and owing to hydrolysis their solutions react strongly alkaline to litmus or Brilliant Yellow paper. If in addition the sample contains free caustic soda, a red coloration is obtained on spotting a solution on to Titan Yellow (Thiazol Yellow G) paper. To distinguish between the two, an aqueous solution is acidified with dilute sulphuric acid, when in the case of the naphtholate an immediate precipitate of naphthol is produced, whilst the phenolate solution remains clear (unless the solution is very concentrated, when an oily layer of phenol is produced) and on adding bromine water a copious white precipitate of tribromophenol is produced.

Quantitative determination of sodium phenolate. Sodium phenolate may be rapidly and accurately determined by titration with standard potassium bromate.[1] 2—3 g. of the sample is dissolved in water and made up to 500 c.c. To 25 c.c. of this solution are added 15 c.c. of hydrochloric acid and 10 c.c. of 20% potassium bromide solution. The solution is then titrated with $N/5$ potassium bromate until a test spot on starch iodide paper shows the presence of a slight excess of free bromine. The end-point is very sharp. (1 c.c. of $N/5$ bromate = 0·003867 g. of sodium phenolate.) 100 c.c. of the same solution of the sample is then titrated with $N/10$ hydrochloric acid, using phenolphthalein as indicator. If this titre is equivalent to the bromate titre, the sample is neutral sodium phenolate; if it is higher than the bromate titre the sample contains free alkali and the amount of this present can be calculated from the difference in the titres. If the acid titre is less than the bromate titre, free phenol is present.

Sodium phenolate is frequently met with containing water of crystallisation. A sodium phenolate of excellent appearance, sold as an accelerator, tested 75·0% both by bromate and acid titration, the remainder being water of crystallisation which was not lost on drying *in vacuo*. The water of crystallisation cannot be determined satisfactorily by drying at 100° C., as a certain amount of decomposition takes place.

Sodium β-naphtholate.—This is best determined by titrating with a standard solution of diazotised *p*-nitroaniline according to the method described by Vaubel,[2] the end-point being, however, best obtained by spotting the reaction mixture on to filter paper and continuing the addition of the diazo solution until the rim of the spot gives a faint coloration with a drop of the original naphtholate solution.

Group II.—Nitrogen only present.

In this group are included basic amino-compounds such as aniline, naphthylamine, *m*- and *p*-phenylenediamines, piperidine, etc., nitroso compounds, *e.g.*, *p*-nitrosodimethylaniline, arylguanidines and biguanides, aldehyde-ammonia, etc. The simpler amines are generally easily recognisable and can be determined by well established methods,[2] and so will not be dealt with here in detail. In general, the primary aromatic monoamines are easily detected by (1) the carbylamine reaction, and (2) the fact that when dissolved in dilute mineral acid they react with sodium nitrite, forming diazo solutions which give a red colour on spotting on filter paper into an alkaline solution of β-naphthol. *m*-Diamines give deep brown solutions on treatment with nitrous acid, whilst *p*-diamines on adding first aniline hydrochloride solution followed by potassium bichromate give an intense blue coloration. *p*-Phenylenediamine can be rapidly and accurately determined by the method of Callan and Henderson (J., 1919, 408 T).

(*a*) *Nitroso compounds* (*p*-nitrosodimethylaniline, *p*-nitrosophenol, α-nitroso-β-naphthol). Of these, nitrosophenol is the only one which gives Liebermann's "nitroso" reaction.

p-Nitrosodimethylaniline is a green power moderately soluble in water, the solution being deep yellowish-brown. It is generally sold for use as an accelerator in the form of a wet paste.

p-Nitrosophenol is a dark brown powder slightly soluble in water: the solution is pale greenish-yellow, and on adding sodium hydroxide turns a deep brown.

α-Nitroso-β-naphthol is brown in colour, slightly soluble in water giving a light brown coloured solution, which turns bright yellowish-green on adding sodium hydroxide. Its solution in dilute alcohol or acetone gives a dark brown precipitate of an iron complex on adding a ferric salt solution.

p-Nitrosodimethylaniline can readily be distinguished from the other two by the fact that on reduction with zinc and dilute acid it forms *p*-aminodimethylaniline (*as*-dimethyl-*p*-phenylenediamine), which gives Methylene Blue on adding a little hydrogen sulphide solution and a few drops of ferric chloride solution.

Quantitative determination of nitroso compounds.

Each of the above substances may readily and accurately be determined by treating with excess of a standardised solution of titanous chloride[3] or sulphate.[4] It is, however, important that the solution of a known weight of sample, to which has been added excess of the titanous solution, should be slowly heated to about 60°—70° only. If the solution is rapidly heated to the boiling point (as is permissible with nitro compounds), decomposition appears to take place and low results are obtained. This is particularly noticeable with nitroso-β-naphthol. After heating for a few minutes at 60°—70°, the solution is cooled and the excess of titanous solution determined by titration with standard iron alum in the usual way.

Clauser[5] has published a method which is specific for nitroso compounds (*e.g.*, in admixture with nitro compounds). It depends upon the fact that phenylhydrazine reacts on nitroso compounds in acetic acid solution, liberating one molecule of nitrogen per mol. of nitroso compound.

We have investigated this method exhaustively in the case of *p*-nitrosophenol and find that it is tedious

to carry out and requires considerable practice and manipulative skill to get anything like concordant results. Even with the greatest care the results are liable to vary within 5%, as shown by the results in the following table (Table I.). It cannot, therefore, be recommended for technical analysis.

TABLE I.

1	0·1158	20·1	95·4
2	0·1436	24·1	92·1
3	0·1418	24·9	94·5
4	0·1585	26·9	93·3
5	0·1643	27·9	93·1
6	0·1666	27·3	90·0

) *Arylguanidines.* This group includes some of most widely used accelerators, *e.g.*, diphenylnidine $(C_6H_5{\cdot}NH)_2C{:}NH$, and triphenylguanidine $H_5NH)_2C{:}N{\cdot}C_6H_5$. Previous to these subces coming into commercial use as rubber accele-ors, they were comparatively obscure organic micals, and reliable information as to their identifion and determination is scanty.

hey are usually prepared by condensing thio-anilide or its homologues with ammonia or a nary aromatic amine in presence of lead com-nds. Thus with thiocarbanilide and ammonia in product is *sym*-diphenylguanidine, whereas gives *sym*-triphenylguanidine :

$$_5{\cdot}NH)_2C{:}S + NH_3 = (C_6H_5{\cdot}NH)_2C{:}NH + H_2S.$$
$$_5{\cdot}NH)_2C{:}S + C_6H_5NH_2 = (C_6H_5NH)_2C{:}NC_6H_5 +$$

mber of other aromatic amines, *e.g.*, *o-* and lines, have been used commercially in place of so that numerous isomeric and homologous nes are met with commercially, *e.g.*, phenyl-*o-* and phenyl-*p*-tolylguanidines, di-*o-* and di-*p-* guanidines, phenyl-di-*o*-tolyl- and phenyl-di-yl-guanidines, tri-*o*-tolyl- and tri-*p*-tolyl- guanis, etc.

urther, a commercial accelerator may be (and n is) a mixture of isomers, probably from having prepared from commercial products; for ple, a tri-*o*-tolylguanidine may contain a con-ble proportion of the para isomer, due to the dine used in its manufacture containing ine, and though giving after recrystallisation ul white product apparently pure, its melting-y be low and indefinite and not correspond oted in the literature.

ying the general reactions of the arylwe shall indicate the methods which we useful in determining the constitution of uanidines.

General properties of the arylguanidines.

arylguanidines form colourless crystals or white owders, almost insoluble in water but easily soluble n alcohol. They are organic bases, and easily dissolve on warming with dilute acids. Caustic soda re-precipitates the bases from these solutions as a occulent precipitate.

A characteristic property is the sparing solubility of ertain of their salts—*e.g.*, the nitrates, picrates, perhlorates, and thiocyanates. This solubility varies with the different members—for example, the thiocyanate and perchlorate of triphenylguanidine are considerably less soluble than the corresponding salts of diphenylguanidine. The arylguanidines are sufficiently strong bases to allow of accurate titration with standard acid under suitable conditions, and the determination of the neutralisation equivalent is of very considerable value in identifying and determining these substances: 0·5—1·0 g. is dissolved in neutral alcohol and titrated with $N/10$ hydrochloric acid, using Bromophenol Blue as indicator. The colour change at the end-point, from blue to yellowish-green, is very distinct. The arylguanidines are mono-acid bases, so that one gram-molecule requires 10,000 c.c. of $N/10$ HCl for neutralisation. Diphenylguanidine has been proposed as a standard in acidimetry and alkalimetry,[6] but its value in this respect is, in our opinion, very questionable, as most samples of diphenylguanidine contain traces or more of triphenylguanidine from which it is very difficult to free them. Triphenylguanidine would be a much more suitable substance for this purpose, as it has a higher molecular weight and can readily be obtained in a very high degree of purity by recrystallisation from benzene or toluene.

In order to identify fully an accelerator which, possessing properties similar to those outlined above (alcohol-soluble base giving sparingly soluble nitrate and picrate etc.), is suspected to be a guanidine, the following determinations made on the recrystallised product are necessary: (1) Neutralisation equivalent, (2) molecular weight, (3) melting point, (4) picrate value.

Neutralisation equivalent. This is determined on the recrystallised substance in the way already described. In the absence of alkaline substances, such as calcium oxide or carbonate etc., a determination also on the original substance affords a means of determining the amount of organic base actually present in the sample.

Molecular weight. Rast[7] has published a method for the determination of molecular weights which we have found extremely valuable as a means of identifying not only guanidines but other organic accelerators as well, as the method is simple and can rapidly be carried out without special apparatus. The method depends upon the fact that camphor used as a solvent in the determination of molecular weights by the depression of the freezing-point method has a large freezing-point depression (40° for a concentration of 1 g.-mol. per kg of solvent). A Beckmann thermometer may consequently be dispensed with and the determination of the freezing-point depression carried out with an ordinary melting-point apparatus. The method was originally described for micro-molecular-weight determinations, using only a few milligrams of the substance, but we have found it advisable to take rather larger quantities. About 0·1 g. of the substance is weighed out accurately into a small specimen tube, 10—15 times the weight of camphor added and accurately weighed, and the mixture carefully melted, the tube being closed with a stopper during the melting to prevent loss by volatilisation. The melt is rapidly cooled, the top

6 C. A. Carlton, J. Amer. Chem. Soc., 1922, 44, 1469-1471.
7 Ber., 1922, 55, 1051-1054.

layer scraped away and rejected, and the remainder removed from the tube and well mixed. A portion is then transferred to a melting-point tube with a very small bulb at the bottom, and the melting point determined in any ordinary type of melting-point apparatus, using a thermometer reading from about 140° to 190°. The melting-point taken is when the last crystal disappears from the liquid melt.

Table II gives the results obtained with a number of accelerators. In certain cases the determination was made before the identity of the substance had been established. The approximate molecular weight thus obtained, taken in conjunction with the neutralisation equivalent, is most valuable in identifying a particular guanidine.

* Some decomposition took place during the melting.

Melting point. The melting point is often of considerable value, especially in the case of mixed guanidines. Such mixed guanidines may be of two types, *e.g.*, a mixture of diphenyl- and triphenyl-guanidines having different molecular weights and a mixture of isomers such as phenyl-*o*-tolylguanidine and phenyl-*p*-tolylguanidine. Such mixtures are indicated by the change in melting point on recrystallisation, but in only the first class of mixture is there a change in molecular weight and neutralisation equivalent, so that the latter determinations, taken in conjunction with the melting point before and after recrystallisation, affords a reliable method of discriminating between these two types of mixed guanidines.

TABLE III.

Melting points of various guanidines.

sym.-Diphenylguanidine	
Pure	149°
Commercial A (British manufacture)	142°–144.5°
" B (American ")	144°–144°
" C (" ")	146°–149°
" D (" sold as "pure")	147°–147.5°
sym.-Triphenylguanidine	
Pure	146°
Commercial A (British manufacture)	144.6°–145°
" B (")	143.5°–144.5°
Tri-*o*-tolylguanidine (pure)	130.5°
Phenyltolylguanidine	
Commercial	127°–129°
After recrystallisation	129.5°–130°
Di-*p*-tolylguanidine (recrystallised)	170.5°

Picrate value. The picrates of the arylguanidines are very sparingly soluble in water, and under the conditions given below can be practically quantitatively precipitated. As the information in the literature about the solubility of the picrates is very scanty, we have determined the solubility of the picrates of some of the better-known guanidines. This was determined in each case by shaking the recrystallised picrate with distilled water in a stoppered bottle in a thermostat; a portion of the liquid was removed from the bottle at intervals and filtered, and 100 c.c. of the clear filtrate titrated with titanous sulphate to obtain the picrate content, the shaking being continued until a constant value was obtained for this titre, and from it the solubility of the picrate was calculated.

TABLE IV.

Solubilities and melting points of picrates of various substituted guanidines.

	Melting point (uncorr.).	Solubility in water at 20° C. 1 pt. dissolves in
sym.-Diphenylguanidine picrate	170.3°	5100 parts
sym.-Triphenylguanidine picrate	182.0°*	12,050 parts†
Phenyltolylguanidine picrate	157.5°	3750 parts
Tri-*o*-tolylguanidine picrate	171.0	8740 parts

* Dabis (J. Amer. Chem. Soc., 1900, **22**, 184) gives m.p. as 180°. Mulliken ("Identification of Organic Compounds," Vol. II., No. 882) gives 180°–181°.

† Prelinger (Monatsh., **13**, 98) gives the solubility as: 1 part dissolves in 12,200 parts of water at 15°.

The sparing solubility of the picrates as means of obtaining a pure derivative from an commercial guanidine, and it is often advisabl to prepare the picrate and determine its compos tion, and hence the molecular weight of the guanidine, by the method given below rather than to determine the molecular weight of the recrystallised product by the camphor method, or by the neutralisation equivalent, which might result in fractionation of a mixture of guanidines during the recrystallisation process. Moreover, the weight of picrate obtained is a direct measure of the guanidine present.

The following is the method of precipitation w has been worked out and which gives practic quantitative yields with the guanidines met w commercially. 0.3–0.4 g.* of accelerator is weigh out accurately into a 100-c.c. beaker and dissolve by warming with 10 c.c. of water and 3–4 c.c. of *N* hydrochloric acid, any insoluble matter being filter off and washed with a little hot water. The filtra and washings are diluted to 20 c.c., cooled to abo 40° and 50 c.c. of cold 1% aqueous picric acid added with stirring. The mixture is allowed to stand for at least 3 hours, with occasional stirring, and then filtered through a tared Gooch crucible and washed with cold water in small portions of 2–3 c.c. at a time until the filtrate no longer reacts [illegible] to litmus paper. As a rule 20 c.c. of water is [illegible]t, but in certain cases the precipitate is very vol[illegible]ns (*e.g.*, tri-*o*-tolylguanidine picrate) and in such cases the precipitate should be gently pressed together with a glass rod so that the pump may remove all traces of mother liquor, and the wash-water increased to 30 c.c. After draining at the pump, the crucible and contents are dried at 100° until constant in weight.

Picric acid content of picrate. 0.1 g. of the dried picrate is weighed out accurately into a 250-c.c. flask, 7 c.c. of concentrated sulphuric acid added to dissolve the picrate, and then 10 c.c. of water. The solution is cooled and 50 c.c. of titanous sulphate solution, containing approximately 3% of $Ti_2(SO_4)_3$,

* If the accelerator is suspected to be a biguanide (see later) 0.15—0.2 g. only should be taken.

to be a biguanide should be determined by the camphor method and its neutralisation equivalent determined by titration with standard acid and Bromophenol Blue. The nitrogen content should then be determined by Dumas' method and the number of atoms of nitrogen per molecule thus obtained. N_5 being obtained for a biguanide as against N_3 for an arylguanidine.

The following results were obtained with a commercial sample of *o*-tolylbiguanide: Melting point 140°–144°, strength as $C_9H_{13}N_5$ by titration 93·5%, moisture 4·96%. The sample was then recrystallised from water and the air-dried crystals found to contain 4·67% of water ($C_9H_{13}N_5+\frac{1}{2}H_2O$ requires 4·50%). The water-free product (dried at 100°) gave the following analytical data :—

	Molecular weight			Nitrogen.	
M.p.	By camphor method.	From neutralisation equiv.	Theory.	Determ. (by Dumas) %	Theory. %
145–146* ..	(1) 189 (2) 196	191	191	35·9	36·6

* Bentel (Annalen, **310**, 336) gives 144

o-Tolylbiguanide differs from the guanidines in giving a picrate which contains 2 mols. of picric acid to 1 mol. of base. Thus four preparations of the picrate contained 70·50%, 70·88%, 70·48%, and 70·61% of picric acid respectively—theory for a dipicrate requiring 70·57%. The second molecule of picric acid is, however, only loosely combined as on recrystallising from alcohol partial decomposition takes place. Thus a sample of acid picrate containing 70·61% of picric acid contained only 68·4% after recrystallising from alcohol. We have so far had no opportunity of examining other biguanides to see if the property of forming dipicrates is common to this class of compounds.

Aldehyde-ammonia. This substance is readily identified and does not need much mention here. It melts at 96° and is soluble in water, the solution being strongly alkaline. The aqueous solution can be titrated quantitatively with standard acid, using Methyl Red as indicator. Acetaldehyde is liberated by the reaction and may be tested for in the usual ways.

Commercial samples frequently contain a small amount of free lime. This, if present, may be determined by extracting a known weight of the sample with hot benzene (in which aldehyde-ammonia is fairly readily soluble). The residue is filtered off, suspended in water, and titrated with $N/10$ hydrochloric acid, using phenolphthalein as indicator to give the free lime content, and continuing the titration using Methyl Orange to determine any calcium carbonate which may be present.

Group III.—Sulphur only present.

The chief representatives of this class are dithioacids, *e.g.*, dithiobenzoic acid. We have, however, not had the opportunity of examining commercial accelerators belonging to this class and do not propose therefore to treat of them.

Group IV.—Nitrogen and sulphur present.

This group includes certain well-known accelerators such as thiocarbanilide and derivatives of dithiocarbamic acid.

Thiocarbanilide (diphenylthiourea) $(C_6H_5NH)_2CS$. This product is prepared commercially by the direct condensation of aniline and carbon disulphide. Other aromatic amines, *e.g.*, *o*- or *p*-toluidine, may be employed and a series of substituted thiocarbanilides thus obtained. Thiocarbanilide itself is a white, neutral substance which does not give a picrate. It is almost insoluble in water, but easily soluble in warm alcohol and crystallises from it on cooling in the form of white glittering leaflets, m.p. 151° C.

Thiocarbanilide may be quantitatively determined[10] by titration with potassium bromate, one molecule absorbing 4 atoms of bromine: 0·3—0·4 g. of the sample is dissolved in 20 c.c. of glacial acetic acid and 20 c.c. of water, 10 c.c. of 20% potassium bromide solution and 5 c.c. of concentrated hydrochloric acid are added. The solution is warmed to 25–30° and titrated with $N/5$ bromate solution till a test spot gives a reaction on starch iodide paper persisting for 2–4 minutes after the last addition of bromate solution (1 c.c. of $N/5$ bromate = 0·0057 g. of thiocarbanilide). Commercial samples occasionally contain a trace of aniline, which also absorbs bromine. This may be determined as follows:—20 g. of the sample is shaken with 100 c.c. of cold dilute hydrochloric acid (1 : 4), the liquid is filtered and the filtrate and washings are diluted to about 200 c.c., and after adding 5 c.c. of 20% potassium bromide solution, titrated with $N/5$ bromate solution at the room temperature. Any aniline thus found should be allowed for in the determination of thiocarbanilide by bromate titration. Commercial samples also generally contain small amounts of substances which contain more sulphur than thiocarbanilide: consequently a determination of the sulphur content is often of value in judging the quality of a sample. Traces of free sulphur may be also present: such may be detected by extracting in a Soxhlet apparatus with carbon disulphide in the usual way.

Determination of total sulphur in thiocarbanilide. Thiocarbanilide and its substituted derivatives are readily decomposed by ignition with an intimate mixture of lime and dry sodium carbonate (4 : 1): under suitable conditions the sulphur is quantitatively retained by the mixture, and may be determined as barium sulphate in the usual way. The ignition is conveniently carried out in a silica tube of approximately the dimensions of a test-tube. A layer of the pure mixture of lime and sodium carbonate is first put in the tube to a depth of about ½ in., and then there is added about 0·2 g. of thiocarbanilide which has been intimately mixed with about 2–3 g. of the mixture of lime and sodium carbonate; finally the tube is lightly filled with the mixture of lime and sodium carbonate to within about 1½ in. from the top, about 8 g. of the mixture being required in all. The tube is supported in an inclined position and then gradually heated, starting at the top. When the top is hot, the lower portion is gradually heated with another Bunsen burner, and finally the whole tube is raised to a red heat. The total time of heating is about ½ hour.

After cooling, the contents of the tube are extracted with water, 20 c.c. of saturated bromine

[10] Callan and Henderson, J., 1922, 161 T.

added with the usual precautions[9] and the solution boiled gently for 10 minutes in an atmosphere of carbon dioxide. After cooling, the excess of titanous sulphate is determined by titration with a standard iron alum solution in the usual way. The iron alum solution is best standardised against pure, recrystallised picric acid. The following table (Table V.) gives the results obtained with a number of pure and commercial guanidines by the above method. The last column (mol. wt. of base calc. from composition of picrate) is of considerable interest, as it gives the mean molecular weight of all guanidines present.

In the case of certain commercial diphenylguanidines the values obtained are higher than required by the diphenyl-derivative, and we were in fact able to isolate triphenylguanidine from these products by fractional recrystallisation of the hydrochloride. It should be noted that if a sample of triphenylguanidine contains diphenylguanidine the direct titration by means of standard acid and Bromophenol Blue gives a fictitiously high value for the basic content calculated as triphenylguanidine—thus a mixture containing 88.6% of triphenyl- and 8.4% of diphenylguanidine and 3.0% of inert matter would titrate as 100% triphenylguanidine. Such a mixture, however, would be at once indicated by the molecular weight of the mixed picrates obtained. It is within our own knowledge that samples of accelerator believed to be diphenylguanidine, and tested as such in the vulcanising process, were in fact mixtures containing a considerable amount of triphenylguanidine.

The most commonly used guanidines are *sym*-diphenyl- and *sym*-triphenyl-guanidines.

Diphenylguanidine. A good commercial sample should have a melting point not lower than 142° and should contain at least 94% of alcohol soluble base calculated as diphenylguanidine when titrated with $N/10$ hydrochloric acid using Bromophenol Blue as indicator, and should completely pass a 60-mesh sieve. Practically all commercial samples contain a proportion, up to 10%, of triphenylguanidine and, as previously mentioned, this has the effect of reducing the apparent strength as given by the titration with standard acid. Other common impurities are lead salts and a by-product of manufacture, tetraphenylbiguanide, both of which are insoluble in hot toluene, in which diphenylguanidine readily dissolves.

Triphenylguanidine. A good commercial sample should titrate at least 96% with standard acid, using Bromophenol Blue as indicator, should have a melting point not lower than 143°, and should contain not more than 1% insoluble in hot toluene. It should completely pass a 60-mesh sieve. The following qualitative test will be found very useful in order to differentiate rapidly between diphenylguanidine and triphenylguanidine.

To 5 c.c. of a 1% solution of the base dissolved in a slight excess of dilute hydrochloric acid, 1 c.c. of 10% ammonium thiocyanate solution or 20% perchloric acid is added. Under these conditions pure diphenylguanidine gives no precipitate whilst triphenylguanidine gives an immediate heavy white precipitate. Commercial samples of diphenylguanidine usually give a turbidity or precipitate, the amount of which affords a rough indication of the quantity of triphenylguanidine present.

(*c*) *Arylbiguanides* (*guanylguanidines*). At least one member of this class, *o-tolylbiguanide*

$$NH_2{\cdot}C({:}NH)NH{\cdot}C({:}NH){\cdot}NH{\cdot}C_6H_4CH_3 + \tfrac{1}{2}H_2O,$$

is now on the market as a vulcanising accelerator under a trade name. The phenyl- and tolyl-biguanides are white substances, moderately soluble in cold and easily soluble in hot water, and crystallise from water in glittering plates. Their aqueous solutions are strongly alkaline to litmus, and on addition of a drop of copper sulphate solution give an immediate pinkish flocculent precipitate. They are thus readily distinguished from the arylguanidines. The molecular weight of a substance suspected

[9] Knecht and Hibbert, *loc. cit.* Callan, Henderson, and Strafford, *loc. cit.*

water is added, and the solution heated for about 20 minutes to oxidise any sulphide. The liquid is then made slightly acid with hydrochloric acid, boiled till the bromine is removed, filtered, and the filtrate and washings precipitated at the boiling point with barium chloride solution in the usual way. A blank determination must be carried out on the same amounts of reagents to allow for any sulphate present. It is noteworthy that the camphor method for determining the molecular weight fails in the case of thiocarbanilide, and hence the method cannot be employed in distinguishing thiocarbanilide from its higher substitution products, *e.g.*, ditolylthiourea. The following are examples of results obtained with pure samples :—

Substance	Wt. taken, g	Wt of camphor taken, g	M p.	Depression, °C	Molecular wt Determined.	Molecular wt Theory.
Thiocarbanilide	0·1018	0·9917	152·3	22·5	183	228
	0·0885	1·0860	156·0	18·8	174	228
	0·0510	0·7444	158·2	16·6	167	228
Di-o-tolylthiourea	0·0838	0·8130	152·7	22·1	187	256
Di-p-tolylthiourea	0·0600	0·6040	153·2	21·6	184	256

A good commercial sample of thiocarbanilide should have a melting point not lower than 147·5° and should test at least 94% by the bromate titration; it should not contain more than a trace of aniline and inorganic matter (ash), and should completely pass a 30-mesh sieve.

Substituted thiocarbanilides. Di-o-tolylthiourea. $(CH_3{\cdot}C_6H_4{\cdot}NH)_2{:}CS$. This substance crystallises from alcohol in fine white needles of m p. 155°. It cannot be titrated by means of potassium bromate, as, although absorption takes place, no definite end-point can be obtained.

Di-p-tolylthiourea. This is only very sparingly soluble in alcohol, and is best recrystallised from benzene. The recrystallised substance melts at 175°. The sulphur content of these two compounds may be determined by the method described under thiocarbanilide. A sulphur determination on the recrystallised product is of great help in characterising a substance suspected to be thiocarbanilide or a substituted thiocarbanilide.

Derivatives of dithiocarbamic acid. The alkyl derivatives of dithiocarbamic acid, $NH_2{\cdot}CS{\cdot}SH$, are frequently used as accelerators and various derivatives are met with commercially, the NH_2 group of the parent substance being substituted by methyl, ethyl, or piperidyl groups, whilst the acidic hydrogen may be substituted by metals such as zinc, or aliphatic amines may be added on to give substituted ammonium salts. These substances are very readily prepared by the direct union of carbon disulphide and an amine, and as most amines react readily a considerable number of derivatives are possible, but only the following are generally met with commercially: dimethylammonium dimethyldithiocarbamate $(CH_3)_2N{\cdot}CS{\cdot}S{:}NH_2(CH_3)_2$; diethylammonium diethyldithiocarbamate $(C_2H_5)_2N{\cdot}CS{\cdot}S{\cdot}NH_2(C_2H_5)_2$; zinc dimethyldithiocarbamate $[(CH_3)_2N{\cdot}CS{\cdot}S]_2Zn$, and the corresponding zinc diethyl derivative and piperidinium piperidyldithiocarbamate (piperidinium pentamethylenedithiocarbamate).

As a class these substances are readily recognised by the fact that they liberate carbon disulphide on warming with dilute sulphuric acid, the sulphate of the corresponding amine being simultaneously formed. After distilling off the carbon disulphide, the residual solution is made alkaline and the liberated base recovered by distillation, and identified by converting into the corresponding platinichloride and determining the platinum content of this by ignition. Piperidine is readily recognised by its odour and by reconverting into the dithiocarbamate derivative by treating with carbon disulphide and determining the melting point of the product (172°) after recrystallising from alcohol.

These substances are such powerful accelerators that they are usually sold commercially in the form of mixtures containing a considerable amount of diluent such as kaolin. The determination of the amount of active constituent therefore becomes a matter of considerable importance, and hence the following method has been devised. It is based on the fact that these substances decompose quantitatively on distillation with dilute acid into carbon disulphide, which can be distilled off and determined by absorption in alcoholic potash and titration of the xanthate produced[11] and the amine which can be subsequently liberated by caustic alkali and determined by distilling into excess of standard acid, *e.g.*,

$$N(C_2H_5)_2{\cdot}CS{\cdot}S{\cdot}NH_2(C_2H_5)_2+H_2SO_4 = CS_2+[NH(C_2H_5)_2]_2{\cdot}H_2SO_4.$$

$$[N(C_2H_5)_2CS{\cdot}S{\cdot}]_2Zn+2H_2SO_4 = 2CS_2+[NH(C_2H_5)_2]_2{\cdot}H_2SO_4+ZnSO_4.$$

About 1 g. of the substance (or a correspondingly larger amount in the case of the diluted mixtures) is weighed out into a long-necked round-bottomed flask which can be connected by means of ground glass joints to a large-bulbed U-tube.[12] This is in turn connected to a smaller one, and both are charged with approximately 2*N* alcoholic potash, the large one holding about 25 c.c. and the smaller one about 3 c.c.; 25 c.c. of 30% sulphuric acid is run in to the flask through the centre tube, which passes almost to the bottom of the flask, and the mixture is brought to the boiling point and kept gently boiling for about 30 minutes, a gentle current of air being continuously drawn through the apparatus. The carbon disulphide which is liberated is readily absorbed by the alcoholic potash, forming potassium xanthate, which may be titrated with *N*/10 iodine solution in presence of sodium bicarbonate after neutralising the free alkali with dilute acetic acid:

$$CS_2+C_2H_5OH+KOH = KS{\cdot}CS{\cdot}OC_2H_5+H_2O$$

$$2HS{\cdot}CS{\cdot}OC_2H_5+2I = S_2(CSOC_2H_5)_2+2HI.$$

1 c.c. *N*/10 iodine = 0·0001 g.-mol. CS_2 = 0·0001 g.-mol. of a dithiocarbamate.

After the removal of the carbon disulphide, the alkaline solution in the absorption tubes is replaced by 20 c.c. of *N*/1 sulphuric acid, the residual solution in the flask made alkaline with caustic soda, and the liberated amine distilled off, a slow current of air being continuously aspirated through the apparatus. The excess of standard acid in the absorption tubes is finally titrated with *N*/5 sodium hydroxide, using Methyl Red as indicator.

[11] Radcliffe, J., 1909, 229. Castine, Comptes Rend., 98, 1588.
[12] *Cf.* Robertson, "The Determination of Halogens in Organic Compounds," Chem. Soc. Trans, 1915, 107, 902-907.

From the above equations it will be seen that alkylammonium alkyldithiocarbamates when treated as described above give two mols. of amine for each mol. of carbon disulphide and hence give an acid titre twice that of the iodine titre, whereas in the case of a metallic salt the two titres are identical.

In the case of metallic salts the substance, after removal of any inorganic diluent by extracting with benzene, should be gently ignited and the ash examined for metals, particularly zinc. The determination of such a metal in the recrystallised product gives at once the molecular weight of the compound and affords a valuable means of identification. The following are the results we have obtained with various dithiocarbamates and commercial samples of accelerators belonging to this class

TABLE VI.

Sample	Wt taken.	C.c. N/10 iodine	C.c. N/10 acid	% Strength from CS_2 titre	% Strength from amine titre	% Zinc. Determined	% Zinc. Calc.
Piperidinium piperidyl dithiocarbamate	0·9528	38·60	77·30	99·7	99·8		
Zinc dimethyldithiocarbamate	1·0204	66·55	66·60	99·6	99·7	21·4	21·4
Zinc diethyldithiocarbamate	0·4144	22·90	22·90	99·9	99·9	18·0	18·1
Artificial mixture containing 38·3% zinc dimethyldithiocarbamate, 61·7% kaolin	1·0320	37·6	37·5	35·2	35·1		
Artificial mixture containing 40·0% zinc dimethyldithiocarbamate, 30·0% zinc oxide	1·2020	31·0	31·1	40·0	40·0		
Zinc alkyldithiocarbamate isolated from a commercial accelerator	0·3916	23·50	23·50	107·5* 90·8†	107·5* 90·8†	18·9	18·1* 21·4†

These results indicate that this sample is apparently a mixture of 59% diethyl and 41% dimethyl or monoethyl derivatives.

* Calc. as zinc diethyldithiocarbamate.

† Calc. as zinc dimethyl- or monoethyl-dithiocarbamate.

The alkyl dithiocarbamates are readily converted into the corresponding thiuram disulphides by treatment in alcoholic solution with iodine, which is rapidly absorbed with precipitation of the thiuram disulphide.

$$2R_2N{\cdot}CS{\cdot}SH{\cdot}NHR_2 + I_2 = R_2N{\cdot}CS{\cdot}S{\cdot}S{\cdot}CS{\cdot}NR_2 + 2R_2NH{\cdot}HI$$

We have investigated the reaction in the case of several dithiocarbamates which are soluble in alcohol, and find that it proceeds quantitatively when $N/10$ iodine solution is used at ordinary temperature, and hence affords a convenient volumetric method of analysis. Thus 0·9091 g. of piperidinium piperidyldithiocarbamate dissolved in 25 c.c. of alcohol required 36·95 c.c. of $N/10$ iodine, corresponding to 100% piperidinium piperidyldithiocarbamate. The titration mixture should be diluted somewhat with water towards the end of the titration in order to obtain a sharp end-point with starch indicator.

Thiuram disulphides. As stated above, these are formed by the oxidation of the corresponding dithiocarbamates. They are obtained as well-defined crystalline substances on recrystallising from alcohol, piperidylthiuram disulphide having m.p. 132° and tetraethylthiuram disulphide 70°.

The thiuram disulphides are less reactive than the dithiocarbamates and differ from them by being only very slightly attacked by heating with dilute acids, and in not absorbing iodine. Since they are quantitatively formed from the dithiocarbamates by oxidation, it was thought that it might be possible to reduce them quantitatively back to the corresponding dithiocarbamic acid, which could then be determined by the method previously described. Various reducing agents in alkaline and acid solution were tried, *e.g.*, sodium and alcohol, aluminium and caustic soda, zinc and magnesium with sulphuric acid, stannous chloride, titanous salts, etc. In several cases the reduction proceeded too far, with the formation of hydrogen sulphide, and in others the reaction was incomplete or too slow to be of practical use. Magnesium filings with sulphuric acid in aqueous-alcoholic solution was, however, found to give very satisfactory results, the reaction proceeding smoothly and quantitatively. Under these conditions the dithiocarbamic acid as produced splits up immediately into carbon disulphide and the sulphate of the amine, both of which can be determined as previously described in the case of the alkyldithiocarbamates.

$$R_2N{\cdot}CS{\cdot}S{\cdot}S{\cdot}CS{\cdot}NR_2 + 2H = 2R_2N{\cdot}CS{\cdot}SH = 2R_2NH + 2CS_2.$$

The following are the details of the method as finally adopted: 0·3–0·4 g. of the thiuram disulphide is weighed out accurately into a similar flask to the one previously prescribed for the analysis of dithiocarbamates, dissolved in 40–50 c.c. of alcohol, 1 to 2 g. of magnesium filings added, and the flask connected to the U-tubes containing $2N$ alcoholic potash. About 50 c.c. of 25% sulphuric acid is then gradually added in portions of a few c.c. at a time and the mixture slowly raised to the boil, a slow current of air being continuously aspirated through the apparatus. After about 50 minutes the yellow solution becomes colourless, indicating the completion of the reaction. The heating is continued for about 15 minutes longer to ensure complete removal of the volatile products. The solution in the absorption tube is then titrated with iodine as previously described, and the liquid in the flask made alkaline, the liberated amine distilled over into excess standard acid and determined in the usual way. From the equation previously given it will be seen that 1 g.-mol. of a thiuram disulphide on reduction gives 2 g.-mols. of carbon disulphide and 2 g.-mols. of the amine; hence 1 c.c. of $N/10$ iodine = 0·00005 g.-mol. and 1 c.c. of $N/10$ acid = 0·00005 g.-mol.—*e.g.*, 1 c.c. of $N/10$ iodine or $N/10$ acid = 0·0148 g. of tetraethylthiuram disulphide (mol. wt. 296), or 0·0160 g. of piperidylthiuram disulphide (mol. wt. 320).

The following are the results obtained with various samples of thiuram disulphides.

TABLE VII.

Substance	Wt. taken, g.	c.c. N/10 iodine.	c.c. N/10 acid	Strength calc. from CS_2 titre.	Strength calc. from amine titre.

A MODIFICATION OF THE GROSVENOR HUMIDITY CHART.

BY G. J. GREENFIELD, A.I.C.

The usual method of stating the "humidity" of air or other gases is as "grains (ounces or pounds) of water vapour per cubic foot," but owing to the change of volume of a gas with temperature, this method gives no constant basis on which to calculate. Also, since air is described as being, say, 50% saturated when the water vapour exerts one-half of its saturation pressure at the given temperature, it follows that there is more air in a cubic foot at 50% saturation than at 100% saturation; *e.g.*, at 60° F., one cubic foot contains at 100% saturation, 0·0008264 lb. of water and 0·075068 lb. of dry air, and at 50% saturation, 0·0004132 lb. of water and 0·075609 lb. of dry air (data from Kempe's "Engineer's Yearbook" for 1921, p. 1590). Thus "percentage humidity" is not really a comparable percentage, and even at a constant temperature there is no constant basis for calculations.

To provide such a basis, W. H. Grosvenor* proposed a very simple measure of humidity, namely, "pounds of water vapour per pound of dry air." The advantage of this is obvious, for a pound of dry air is a constant amount, irrespective of changes of temperature, pressure, or humidity. Calculations made on this basis become very simple indeed. It is curious that since the publication of this paper, very little attention has been paid to it. So far as the author is aware, no mention of the system has been made in any publication, excepting in "Principles of Chemical Engineering" (by Walker, Lewis, and McAdams, pub. McGraw-Hill, 1923), in which the system is fully described.

The following definitions are made:—

Absolute humidity (h) is the number of pounds of water vapour carried by one pound of dry air.

Percentage humidity is the number of pounds of water vapour carried by one pound of dry air at a definite temperature, divided by the number of pounds of vapour which one pound of dry air would carry if it were completely saturated at the same temperature. It is to be emphasised that this is not the same as "percentage relative humidity," discussed above.

Humid heat (s) is the quantity of heat necessary to raise the temperature of one pound of dry air, plus such water vapour as it contains, by 1° F. (or 1° C.).

Specific volume is the volume occupied by one pound of air, when dry.

Humid volume is the volume occupied by one pound of dry air, plus such water vapour as it contains.

The proposed modification.

This system, and the chart accompanying it, are useful enough in calculations affecting dryers, humidifiers, etc., where water vapour is carried by air. Clearly the above definitions can be read as applying to any other gas, and the chart may be used, if its humidity ordinates are elongated in the ratio (mol. wt. of air) : (mol. wt. of the gas). The "adiabatic cooling curves" cannot be used for any other gas than air.

In many industrial processes, *e.g.*, the production of coal gas, producer gas, etc., the production is measured by a meter in cubic feet, but the molecular weight varies from day to day. In order, therefore, to use the original chart, a gas sample would have to be analysed every time an observation was taken, in order to compute the average molecular weight. However, from the temperature and pressure at the meter, it is easy to calculate the flow of gas in pound-molecules per hour, irrespective of the molecular weight.

The proposed modification, therefore, is to express the humidity of a gas as pounds of water per pound-mol. of dry gas, instead of per pound of dry gas. In the accompanying chart, the lines for 100%, 80%, etc. humidity, and for specific volume and humid volume, have been calculated directly from Grosvenor's original figures, by multiplying by the molecular weight of air, which, also calculated from his figures, has been taken as 28·98. The lines for humid heat, and the adiabatic cooling lines, must differ with the molecular specific heat (MCp) of different gases. For exact work with a particular gas of given composition, these lines would be recalculated from the formulæ,

Molecular humid heat (S) = MCp + 0·48H.

Adiabatic cooling lines, slope $\left(\frac{dH}{dT}\right) = -\frac{S}{r_w}$

(r_w = latent heat of steam, per lb. at the wet bulb temperature in question. For a discussion of these equations, and a description of the uses of adiabatic cooling lines, see "Principles of Chemical Engineering," *loc. cit.*) On this chart, a value of 7·25 has been taken for the molecular specific heat. That this is a fair average value for all industrial gases is shown by the following table, in which the analyses are derived from "The Calorific Value of Gas," by J. H. Coste, except those for coal gas, which were taken at a coke works under the author's supervision, widely different ones being chosen in this case for contrast. The specific heats of the constituent gases are taken from data in the above book, and also from an article by Lewis and Randall (J. Amer. Chem. Soc., 1912, 1128). "Illuminants" have been counted as ethylene.

The necessity for this modification of Grosvenor's system occurred to the author during some observa-

Gas.	Percentage composition H_2	O_2	N_2	CO	CO_2	CH_4	C_2H_4	MCp at 20° C.

A

tions on the efficiency of some gas coolers on a coke-oven plant. The gas in question, after passing through a "serpentine" air cooler, enters a series of water coolers at about 60° C. The quantities observable are the gas and water temperatures entering and leaving each cooler, and the rate of flow of gas (by a meter situated after all the coolers) but not the rate of flow of water. In order, therefore, to calculate the rate of transfer of heat from gas to water, it is necessary to know the heat content of the gas, and its humidity. That the gas is saturated at all points in the system is shown by the fact that liquor issues from the seal pot of every cooler. To apply the Grosvenor chart would entail a gas analysis for every set of observations. By the use heat, in C.h.u. per pound-mol. of dry gas (=S). (One Centigrade heat unit, C.h.u., is the quantity of heat necessary to raise one pound of water by 1° C.)

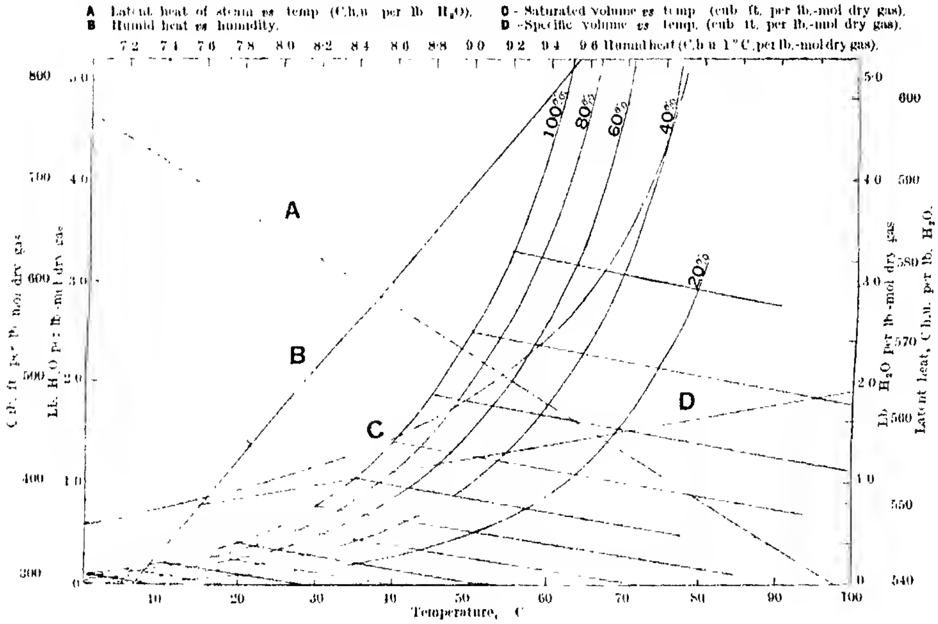
Then heat content = GST (C.h u. per hour passing the point in question).

Or (2) choosing a suitable value for the probable MC_p of the gas considered, read off the latent heat of steam at the temperature T, from the chart ($=r$) and

Heat content $= GT(MC_p + rH)$.

The latter method is more accurate, but involves slightly more trouble. Other examples of the use of the chart will be apparent. It must be remembered

Humidity chart, modified from the Grosvenor chart.



of the modification here presented, no gas analyses are necessary. The procedure is as follows:—

If V = recorded gas flow, in cub. ft. per hour.
T = gas temperature at meter.
p = absolute gas pressure at meter (mm.).
v = humid volume at T° C., from the chart,

then $Vp/760$ = cub ft. per hour at 760 mm. and T° C., and therefore $Vp/760v$ = lb.-mols. dry gas per hour = G (say).

From the recorded gas temperature at any observation point, the water vapour per pound-mol. of dry gas is read from the chart (=H). The heat content of the gas at that point can then be determined by one of two methods. The heat content with which we are concerned is the sensible heat of the gas above 0° C., plus the latent heat of the water vapour present.

(1) Accepting the value, 7·25, for MC_p, read from the plot of humid heat versus humidity, the humid that the chart applies to a total pressure of 760 mm., and for any other pressure, p mm., the humidity read from the chart must be multiplied by the factor, $760/p$. This is only an approximation, and is not accurate when the partial pressure of water vapour is not small compared with 760 mm. The adiabatic cooling lines have been included in the chart for the sake of completeness, but their only probable use is in cases of drying of substances by hot flue gases, since wet-bulb temperatures of coal gas, producer gas, and other industrial gases would usually be vitiated owing to the presence of dust and other suspended impurities.

As has been shown, the chart is applicable to all important gases, although it is not intended to supersede the original one for the many operations in which air is the carrier, such as drying, air conditioning, etc., in which the original will probably be at least equally convenient.

JOURNAL *of* THE SOCIETY OF CHEMICAL INDUSTRY

Vol. XLIII., No. 3.] TRANSACTIONS [January 18, 1924.

CALCIUM SULPHATE CEMENT.*

BY C. L. HADDON, M.SC., A.I.C., A.INST.P., AND M. A. W. BROWN, B.SC.

The principal objects of this research were :—

(1) To determine the number of allotropic modifications of anhydrous calcium sulphate.

(2) To explain differences in setting properties of calcium sulphate from different sources.

(3) To examine the acceleration of setting by other sulphates.

(4) To investigate the nature of intercrystalline adhesion from the evidence obtainable from calcium sulphate cement.

Calcium sulphate exists in three forms which differ from one another in their water of crystallisation. They are :—

(1) The anhydrous salt, $CaSO_4$, which occurs in nature as anhydrite, and is the principal constituent of flooring plaster.

(2) The hemihydrate, $2CaSO_4,H_2O$, which is the important constituent of plaster of Paris.

(3) The dihydrate, $CaSO_4,2H_2O$, which occurs as gypsum in nature, and is the normal form of calcium sulphate in precipitates.

Van't Hoff[1] distinguished two forms of anhydrous calcium sulphate, one of which he called "soluble anhydrite," but his conclusions have been adversely criticised.[2] Practically all later workers[3] have distinguished two or more forms, the evidence being the variation in solubility and setting properties of flooring plaster according to its mode of preparation and varying solubility. Keane[2], on very little experimental evidence, concluded that only one allotropic modification of calcium sulphate exists, the difference in setting rates being due to difference in grain size. Desch[4] also saw no reason for the existence of more than one modification.

The original explanation of the setting of flooring plaster and plaster of Paris by Le Chatelier[5] was that the plaster dissolved, and the less soluble dihydrate was precipitated as interlocking needles, which gave the final cement its mechanical strength. It was shown by one of the present authors[6] that not more than half the mechanical strength is due to this interlocking—a possibility which had been earlier and independently suggested by Desch.[4] Le Chatelier's main evidence was that in alcoholic solutions he was able to precipitate such crystals, but Von Weimarn[7] has since shown that the nature of a precipitate depends on the degree of supersaturation, and also upon the solubility of the precipitate, every possible type of precipitate of the same substance being obtainable, from a gelatinous mass to well-defined crystals, by varying these conditions.

Ostwald and Wolski[8] investigated the setting of plaster of Paris from the colloidal standpoint. They found that :—(1) On mixing with water it forms a colloidal solution of greatly increased viscosity. On deposition of crystals, the viscosity falls. (2) Grain size has an enormous effect on maximum viscosity. (3) The age of the ground material affects the maximum viscosity, which decreases until it becomes constant with material at least one month old. He explains this as due to agglomeration of particles.

Neugebauer[3], in experiments on so-called "soluble anhydrite" of varying water content, found that aluminium sulphate—a powerful accelerator of setting—did not increase the maximum viscosity, but caused it to be reached earlier. He did not continue any experiments once the maximum was passed. He was unable to find any increase in viscosity as regards flooring plaster, and explained its setting properties as due to its lime content.

Weissenberger[3] examined the colloid chemistry of anhydrite, but employed a wrong method, which will be discussed later. His experimental evidence thus needs revision and his conclusions are valueless.

Rohland[3] examined the effect of dissolved salts on the setting rates, and enunciated the law that "salts which increase the solubility of calcium sulphate increase the setting speed and *vice versa*." This has been disproved in certain cases by one of the authors,[6] and will be discussed later.

Davis[9] has shown by the occurrence of a period of induction in the dehydration of dihydrate that two modifications of $CaSO_4,2H_2O$ exist, and one of the present authors has confirmed this by showing that when certain accelerators are used there is first an increase followed by a decrease to a constant level when the strength of briquettes, under equal conditions of wetness, is plotted against time.

Solubility.

The solubility of the alleged allotropic modifications of anhydrous calcium sulphate must differ except at the inversion point, and if the variations in setting speeds are due to this, the difference in solubility must be considerable. The solubility was therefore determined.

Solubility figures for anhydrous calcium sulphate are liable to the following errors :—(1) Very fine particles are appreciably more soluble than normal particles, and with sparingly soluble substances supersaturated solutions are formed ;[10] (2) anhydrous calcium sulphate absorbs moisture from the air to form hemihydrate (see later). Marignac found the

* Read at a meeting of the Newcastle Section on Jan. 16, 1924.

solubility of the hemihydrate at ordinary temperatures to be about 10 g per litre; (3) from (2) it seems probable that very finely divided anhydrous salt on coming into contact with water will absorb it to form the more soluble hemihydrate at a speed sufficiently rapid to affect solubility determinations; (4) anhydrous calcium sulphate dissolves very slowly and considerable time is necessary for saturation.

In order to eliminate these errors, the most important of which is (2), the salt, in certain instances, was shaken several times with water, and separated by centrifuging. It was then washed with mixtures of alcohol and water containing gradually increasing percentages of alcohol, and dried in a current of warm air. Quantities of 0·5 and 1·0 g were placed in two 100-cc. flasks containing water saturated with respect to dihydrate. The flasks were placed in a thermostat for 5 hours and frequently shaken to maintain a turbid solution. The solutions were then filtered, the first few c.c. being rejected, and the calcium sulphate determined either as barium sulphate or volumetrically as oxalate. There was no appreciable hydration in any case examined. "Soluble anhydrite" with a large water content showed much hydration, but the figures are not included here. When the impurity (*i.e.*, hemihydrate, etc.) is small, if A solubility using 0·5 g. quantities and A + x that using 1 g quantities, then A − x is the solubility of anhydrous calcium sulphate.

If the impurity is higher, this method yields unsatisfactory results as the more highly supersaturated solutions precipitate dihydrate. The degree of setting thus caused was ascertained in every case by determining the loss on ignition of the carefully dried insoluble residue

The solubility figures shown in Table A were obtained The flooring plaster christened Earle's cement was some very pure flooring plaster made by ignition at 500° C. The "soluble anhydrite" was prepared by heating pure dihydrate to 180° C. for 12 hours, and thoroughly washing and centrifuging to remove hemihydrate.

TABLE A.

Solubility

Temperature 25° C. $CaSO_4$, grams per litre

	0·5 g (A)	1 g (A + x)	True solubility (A − x)
"Soluble anhydrite"	2·45	2·38	2·32
Earle's cement	2·38 2·13	2·51 2·50	2·28
Flooring plaster	2·39	2·48	2·30
Pure dihydrate ignited at 700° C	2·29 2·28	2·29	2·29
Anhydrite	2·31	2·31	2·28

The two samples of Earle's cement were washed and centrifuged at different times. The last two samples were not thus treated. The anhydrite had probably absorbed a little moisture to form hemihydrate. This is strong evidence of the existence of only one allotropic modification of anhydrous calcium sulphate.

Similarly the solubility of anhydrous calcium sulphate in 5% $CuSO_4,5H_2O$ solution was found to be 2·08 g. per litre (the mean of five determinations with Earle's cement and anhydrite). Corresponding figures for the solubility of the dihydrate were 2·09 and 1·88 g. of $CaSO_4$ per litre, showing in each case a greater solubility of the anhydrous salt of 0·20 g. per litre. In other experiments with "soluble anhydrite" which had absorbed moisture, this proportional increase in solubility was found to hold true in calcium chloride solutions; *i.e.*, when the inversion point is not appreciably affected, the solubilities of different hydrates of the same salt bear a constant relationship to one another in solutions of different salts in water.

It appears to the authors that, except when solutions are so concentrated as seriously to affect the inversion point of gypsum, each modification of calcium sulphate yields the same substance in solution; therefore, other salts should affect each modification in the same way No published data appear to exist on this subject, except contradictory data by different workers on the solubility of the allotropic modifications of phosphorus in different solvents, where the conditions are not strictly parallel.

As 0·5% of combined water corresponds to 8% of hemihydrate, it might be anticipated that when cement is made the concentration in solution would be that of hemihydrate. It was found that even with large proportions of water to plaster the setting rate is sufficient to keep the quantity in solution below 5 g. per litre. This will be referred to later. Some "soluble anhydrite" which had absorbed 5% of moisture showed a maximum solubility of 6·15 g. per litre.

Borax, which retards the setting of plaster, appreciably increases the solubility of gypsum.

It is obvious that Rohland's theory is untenable. The more rapid solution of plaster in sulphate solutions was shown by shaking 0·5 g. of plaster in 50 c.c. of water and copper sulphate solution respectively, thoroughly shaking, allowing to stand for 5 minutes, and rapidly filtering The copper sulphate solution contained 2·14 g. per litre of calcium sulphate as against 1·76 g for water Similarly, it was found that the electrical conductivity became constant more rapidly with dilute copper sulphate solutions than when water alone was used

In another experiment 6-g. quantities of Earle's cement (which then showed a loss on ignition of 0·63%) were shaken with 100 c c. of water and of 2·5% copper sulphate solution respectively; 25-c.c. quantities were abstracted, filtered, and an aliquot portion analysed The results are shown in Table B.

TABLE B.

Time	Water only	2½% Copper sulphate sol
30 minutes	2·05 g per litre	2·55 g per litre
2½ hours	2·21 g ,, ,,	2·83 g. ,, ,,
5 hours	2·40 g ,, ,,	2·82 g. ,, ,,
Loss on ignition after 5 hours	0·70%	1·32%

These results show that copper sulphate causes more rapid solution, and the greater difference of these solubility figures from the saturation figures of anhydrous calcium sulphate, coupled with the much greater amount of dihydrate formed, show that it also causes more rapid precipitation of dihydrate.

In order to discover if the action of the copper sulphate was to cause peptisation of the solid particles, which would thus dissolve more rapidly, the rate of solution being proportional to the surface,

some elutriation experiments were carried out. The *modus operandi* is described later. Accurate results wero impossible as solution of the hemihydrate affected the particle size and somo dihydrate appeared to be deposited when copper sulphate solution was the elutriating medium. The results show that measurable peptisation does not occur; hence this is not the explanation.

The generally accepted theories of solution stato that the solubility of a salt is decreased by the presence of another salt with a common ion except when a double salt is formed, when the solubility increases. In the case of $CaSO_4,2H_2O$, the solubility continues to diminish with the presence in solution of increasing quantities of a second calcium salt, but when SO_4'' is the common ion, an anomalous solubility curve results in practically every case.

Published solubility figures show that increasing quantities of sodium, potassium, ammonium, magnesium, and copper sulphates continuously decrease the solubility of calcium sulphate to a minimum of about 1·5 g. per litre, when from 10 to 30 g. per litre of the second salt is present. Further increases of the concentration of the second salt result in a gradually increasing solubility of calcium sulphate, till in certain instances its solubility becomes considerably greater than in water. This phenomenon is probably connected with the strong accelerating action of sulphates, but no theory of solution appears to offer any thoroughly satisfactory explanation of either phenomenon.

The dissociation theory of Arrhenius might be extended to explain the solubility phenomenon by stating that while the sulphate ion of the second salt decreases solubility, the undissociated molecule increases it, and the undissociated calcium sulphate in solution, as a result, is present under such conditions that passage into and out of solution is facilitated. A saturated solution of calcium sulphate is about 50% dissociated in water, thus the accelerating effect of other sulphates is more rapid than would be explained by assuming that the setting speed varies as the concentration of undissociated molecules of calcium sulphate in solution.

The formation of hemihydrate.

One of tho distinctive properties of so-called "soluble anhydrite" is its ability to absorb moisture from the atmosphero till it contains about 6 or 7%.[11] The same property is shown by ovory modification, as shown in Table C.

TABLE C.

	Loss on ignition. When first made.		
		After time stated.	
Pure $CaSO_4,2H_2O$ heated to 200° C. for 12 hours and kept in stoppered bottle	1·69%	2·56%	3 months later
Second sample similarly made and kept in bottle with cork stopper	1·50%	5·16%	2 months later
Earle's cement kept in stoppered bottle	0·15%	1·135%	18 months later
Pure $CaSO_4,2H_2O$ ignited to 750° C. and kept in stoppered bottle	Nil.	0·27%	12 months later

Thus the lower the temperature of preparation the higher is the rate of absorption, but as shown later, the particle size increases with rise of temperature; so it may be deduced that the rate of absorption varies inversely as the size of the particle, and probably directly as the total surface energy. That this water is present as hemihydrate is shown qualitatively by conductivity experiments and quantitatively by elutriation experiments.

In elutriation of flooring plaster by aqueous solutions which had been previously saturated with anhydrous calcium sulphate, there was always a loss through solution of an amount approximately equal to that calculated from the water content of the original plaster. When the original percentage was high, it was impossible to obtain satisfactory results on account of the large proportion dissolving.

Two direct tests for the formation of hemihydrate were carried out. In the first, some pure dihydrate was ignited at 700° C. for 5 hours, ground to pass through a sieve 25,600 meshes per sq. inch, and intimately mixed with an equal quantity of pure dihydrate dried in a current of warm air. The mixture was kept in a sealed specimen tube for six months. The electrical conductivity was then determined, 25 c.c. of liquid being used and 0·1 g. of solid being added at a time. The temperature was constant at 25°±0·08° C.

TABLE D.

Time. Min.	Resistance. Ohms	Time Min.	Resistance. Ohms.
0	75·40 (sat. $CaSO_4,2H_2O$ sol.)		0·1 g. added.
0·1 g. added		45	60·6
5	66·0	50	60·6
10	66·5	55	61·25
25	67·0	60	62·7
30	67·7	70	63·7
40	67·7	80	63·95

There is thus conclusive evidence of the presence of a much more soluble constituent. These figures differ from other conductivity figures in that with each addition, the first decrease in resistance was followed by a small increase. This increase is obviously due to the deposition of dihydrate, and is due to the large amount of dihydrate present acting as crystalline nuclei, and perhaps also the β-modification of the dihydrate being formed by dehydration, the dihydrate initially crystallising as β salt except under special conditions.

In the second experiment, mineral anhydrite was finely ground, and placed in a covered dish over water for six months. At the end of that period, the powder was found to contain 15·05% of combined water. Here, of course, the first phase, the formation of hemihydrate, had been completed, and the second phase commenced.

Elutriation.

In the apparatus used for elutriation a constant head was obtained by an overflow apparatus, and two nozzles were employed, giving velocities of 0·223 and 0·42 mm. per second respectively, when the elutriating medium was saturated with anhydrous calcium sulphate; 5 g. of the cement was mixed with a bone spatula with some of the elutriating liquid, and the suspension washed into the elutriating vessel. The elutriation was then commenced, and the elutriated particles continuously

Journal of the Society of Chemical Industry.

filtered off, the filtrate being transferred to a reservoir. After six hours the operation was virtually complete, and the experiment stopped. Perfect elutriation was impossible owing to the formation of more finely divided particles, gradual solution, and also to slight setting when copper sulphate solutions were used for elutriation purposes. When the elutriating medium was 5% copper sulphate solution, the head was adjusted to give the same velocity, subsequent corrections for density and viscosity being made. The amounts of elutriated solid and residue etc., were ascertained by filtering, washing with saturated calcium sulphate solution, and igniting. The figures are shown in Table E.

TABLE E.

Elutriating liquid	Speed of liquid. Mm. per sec.	$CaSO_4$ elutriated. g.	$CaSO_4$ residue. g.	Loss. g.
Water saturated with $CaSO_4$, $2H_2O$	0·223	1·11	3·27	
		1·04	3·75	
		Mean, 1·07	3·51	0·44
	0·42	2·17	2·29	
		2·37	2·25	
		Mean, 2·27	2·27	0·46
6% Copper sulphate saturated with $CaSO_4$ $2H_2O$	0·223	1·22	3·31	
		1·37	3·29	
		Mean, 1·30	3·30	0·40

Good duplicates were not obtained. The plaster contained 0·40% of water, corresponding to an anticipated loss of about 0·5 g. if no setting occurred.

The relative densities of water saturated with calcium sulphate, and of 5% copper sulphate solution similarly saturated are 1·01 and 1·04, and the absolute viscosities 0·01235 and 0·01360.

Stokes' well-known law states that $v = \frac{2}{9} \times \frac{gr^2}{\eta}(a-\beta)$

v being the constant velocity acquired by a particle of radius r in a liquid of viscosity η, and $(a-\beta)$ the difference in specific gravity of the liquid and the solid.

The specific gravity of anhydrous calcium sulphate is 2·9. A velocity of 0·223 mm. per second yields 21·4% elutriated, and of 0·42 mm. per second, 45·4% in calcium sulphate solution. A velocity of 0·223 mm. per second in copper sulphate solution is equivalent to a velocity of 0·249 mm. per second in water, which would be expected to elutriate about 25%. The actual amount elutriated was 26%. As the experimental error is several per cent., there is obviously no appreciable peptisation, which should occur if acceleration is to be explained thereby.

Agglomeration of particles.

The effect of intensity and duration of heating on the size of particles was also investigated. To avoid any loss, dry paraffin was used as the elutriating medium.

The constants for the paraffin were—velocity of flow 0·233 mm. per second, specific gravity 0·817, and viscosity 0·02962 dyne.

The following results were obtained:—Original dihydrate, d 2·30, 55·8% elutriated. Dihydrate heated to 200° C. for 12 hours, 59·0%; heated to 440° C. for 12 hours, 24·8%; and heated to 440° C. for 60 hours, 8·9%. Thus, despite the greater amount of dihydrate elutriated on account of its lower density (equivalent to 39% of anhydrous salt) it will be seen that dehydration decreases the size of particles, and agglomeration of particles is caused both by increasing the temperature and duration of heating.

It is generally stated in text-books that the aggregation of particles when precipitates are boiled is due to the finer particles re-dissolving, and precipitating on the coarse particles. That this is not the case with calcium sulphate is shown by the data given below.

The solubility of flooring plaster was determined at higher temperatures under conditions similar to those in the solubility experiments previously described. The temperatures varied from 50° to 65° C. in different experiments. Between these temperatures the solubility of dihydrate varies from 2·01 to 1·93 g. per litre, and the solubility of anhydrous flooring plaster must be higher, as these temperatures are below the inversion point of the dihydrate. The figures obtained varied from 1·39 to 1·90 g. per litre in different experiments. The higher figures were due to the fact that in some experiments the solvent was partially saturated with dihydrate at the beginning of the experiments. There was obvious coalescence of particles, and no hydration.

The solution was never saturated with respect to anhydrous calcium sulphate, yet coalescence of these particles occurred. The phenomenon must be due to the same cause as the agglomeration of particles on heating, the particles colliding and adhering. In the case of the solid alone, the movement of the particles is obviously due to Brownian movement, the amplitude at ordinary temperatures being sufficient to bring small particles in suitable contact with other particles, and at high temperatures the larger particles also acquire sufficient amplitude or velocity.

The colloidal theory of the setting of flooring plaster.

It has already been stated that the setting speed prevents very high supersaturation, and hence the deposition of colloidal precipitates. The supersaturation with plaster rarely rises above 2 g. per litre.

Weissenberger[3] considered that he had established the existence in metals of colloidal phenomena. His experimental method consisted in determining the depth to which a Vicat needle penetrated into a mixture of finely powdered anhydrite and solution. The depth was plotted against time and an ∽-shaped curve obtained in each case. He argued that an initial set took place at the steep part of the curve, and the final hardening later. The first stage of setting he regarded as colloidal—the absorption of water to form a gel—and he associated hardening with the deposition of crystals of dihydrate. He also found that the maximum strength was obtained with 16% of water, as against a theoretical value of 26·7% for perfect hydration. It is obvious from other figures that only part of the anhydrite had hydrated, and thus the optimum percentage of water is a function of voids between the particles and rate of evaporation, and has nothing to do with the amount necessary for hydration or with colloidal phenomena.

To the authors it appeared that the penetration of a Vicat needle would fall into three periods :—(1) In the early stages the needle would penetrate practically to the bottom, just as if allowed to fall into wet powder. (2) The plaster is becoming sufficiently strong to bear the weight of the needle; this is the steep part of the curve. (3) The plaster is strong enough to bear the weight of the needle, but the momentum of the needle carried it a small distance into the plaster—the final gentle slope.

To prove that this was the correct explanation, the "dash-board" of the needle was filled with oil, the plunger lifted, and allowed to fall under the weight of the needle. This insured a constant velocity of penetration. The weight of the needle was altered by placing different weights on the pan. The depth of the pat was 40 mm. The figures in Table F were obtained, and are plotted in Fig. 1.

FIG. 1.

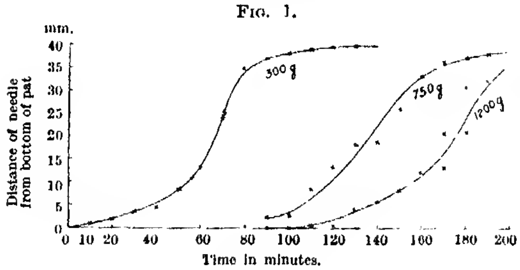


TABLE F.

Time. Min.	Height in millimetres. Pan wt. : 300 g.	750 g	1200 g.
0	0	0	0
10	1, 0·5	-	—
20	1·5, 2·0	—	—
30	3·5, 3·5	—	—
40	5·0, 4·0	—	—
50	7·5, 9·5	-	—
60	12, 20, 8	-	—
70	27, 17, 29	—	—
80	35, 34	—	—
90	37, 37, 37	2·5	0
100	38, 38	3	0
110	39, 39	8, 9	0·5, 0·5
120	39, 39·5	16, 10	0, 1
130	39·75, 39·75	38, 13, 14	2, 6, 4
140	39·75	30, 15, 11	2, 8, 7
150	—	35, 11, 32	9, 7
160	-	32, 34, 35	8, 19, 8
170	—	35, 37, 36	9, 10, 20
180	—	38, 37, 37	20, 12, 32
190	—	38, 38, 38	32, 29, 34
200	—	39, 38, 39	36, 36

The erratic figures on the steep part of the curve afford additional evidence that the strength then is just sufficient to bear the weight of the needle, and is not connected in any way with colloidal phenomena.

Modifications of dihydrate.

In order to confirm that monoclinic $CaSO_4,2H_2O$ can act as crystalline nuclei as well as the normally formed orthorhombic variety, some mechanical experiments were carried out. The results are shown in Table G :—

TABLE G.

Proportions of mixtures. Flooring plaster. g.	Monoclinic crystals. g.	Mean figures of two briquettes. Tensile strength in lb. per sq. in. After 6 hours.	After 24 hours.
350	Nil.	66	260
340	10	70	280
330	20	107	360
320	30	105	350
300	50	120	280

The acceleration of setting shows that the dihydrate has acted as crystalline nuclei. A patent by Linck in 1908 covers this method of accelerating setting, but it is unsatisfactory from the practical point of view.

The great differences in setting speeds caused by varying conditions are shown in Table H. Two pats of flooring plaster and distilled water were made under similar conditions. Specimen A was covered immediately with a little distilled water, and B exposed to air in the ordinary way. Samples of each specimen were dried, and the percentage of combined water was determined.

TABLE H.

Time.	Percentage of combined water. A %	B. %
After 2 days	0·5	0·70
,, 5 ,,	0·5	3·86
,, 9 ,,	0·63	0·83
,, 11 ,,	0·80	12·75
,, 14 ,,	1·05	14·60
,, 17 ,,	2·22	—

These figures illustrate difficulties in gauging setting speeds by determination of the percentage hydration.

Intercrystalline cement.

The well-known theory of Rosenhain[12] of the existence of a powerful intercrystalline cement, amorphous in nature, has not been universally accepted, and F. C. Thompson[13] has put forward an alternative surface tension theory. Metallographic methods do not afford conclusive proof of either theory.

Experiments were carried out to examine the adhesion of set plaster. It was considered that if an amorphous intercrystalline cement existed, it must be much more soluble than crystalline gypsum, and its existence confirmed by electrical conductivity methods. The following experiments were made :—

(1) A flooring plaster (distilled water paste) was rammed into a tube, and a piece of copper wire inserted into each end of the paste. The paste was kept moist for one month, when it thus became fully hydrated. It was then again saturated with water, and allowed to dry, the resistance and weight being determined daily. The specimen was finally dried in a desiccator. The experiment was stopped when the resistance reached 10 million ohms, the initial figure being 5000 ohms. The conductivity per gram of uncombined water was plotted against the water content, but no sudden increase of conductivity was found when the water content became very small.

(2) Briquettes were made, care being taken that the hydration was complete, and saturated with distilled water. The resistance was determined, and the briquette repeatedly strained in the hope of producing more amorphous material. It was found that the elongation of the briquette decreased the resistance by 30%, the original resistance being restored by slight compression. This method was useless for the purpose intended.

It was thus found necessary to revert to mechanical tests. In a previous paper it was shown that the strength of dry briquettes was reduced by 50% on

soaking in water or saturated gypsum solutions. Mineral oils did not decrease the strength at all, nor did absolute alcohol, though mixtures of alcohol and water affected the strength, according to the percentage of alcohol.

The effect of saturated calcium chloride (in which calcium sulphate is only very sparingly soluble) and of glycerin (in which it is more soluble than in water) was studied. The calcium chloride solution was found to reduce the strength in the same degree as water. The results are shown in Table J.

TABLE J.

	No. of briquettes tested.	Tensile strength (lb. per sq. in.).
Dry briquette ..	2	680, 510
Soaked in water	2	410, 425
Soaked in saturated $CaCl_2$ solution	3	400, 460, 140
Soaked in glycerin	2	470, 560

The glycerin took several days to permeate to the centre of the briquette, and even then, on breaking, certain parts of the fractured surface were not visibly permeated.

It is thus obvious that substances in which amorphous calcium sulphate would be anticipated to dissolve decrease the strength of briquettes, and other liquids do not.

It might be objected that though calcium sulphate is more soluble in certain mixtures of alcohol and water than in saturated calcium chloride solution, yet saturated chloride solutions decrease the strength more than alcohol solutions. The cause of this is probably due to surface tension. For this reason the composition of a solution alters as it soaks up into blotting paper, and the same must happen in a briquette. Thus the composition of the solution in the centre of a briquette is probably very different to the composition at the surface.

The evidence obtained supports Rosenhain's theory against Thompson's theory of the cause of intercrystalline strength.

CONCLUSIONS.

The following conclusions may be drawn from the above work:—

(1) Only one modification of anhydrous calcium sulphate exists: its solubility at 33° C. is 2·29 g. per litre and in 5% copper sulphate solution 2·08 g. per litre, against the corresponding solubilities of gypsum of 2·09 and 1·88 g. of $CaSO_4$ respectively.

(2) Rohland's theory of the catalytic action on setting of other salts is shown to be incorrect. Calcium sulphate dissolves and precipitates more readily in the presence of copper sulphate.

(3) Flooring plaster consists essentially of anhydrous calcium sulphate and hemihydrate.

(4) Anhydrous calcium sulphate absorbs moisture from the air to form hemihydrate, the speed depending on the particle size.

(5) Agglomeration of particles is increased by intensity and duration of heating.

(6) Growth of particles in precipitates is due to the particles adhering and not to the finer particles dissolving and reprecipitating.

(7) The different setting rates of different plasters are due to the particle size and percentage of hemihydrate. The importance of external conditions is also shown.

(8) The setting is caused by the interlocking of the needles of precipitated dihydrate and by crystal adhesion.

(9) Crystal adhesion is due to amorphous cement which dissolves in certain solvents, with corresponding loss of mechanical strength.

Finally, we wish to express our thanks to the Chairman and Directors of Messrs. Swan, Hunter and Wigham Richardson, Ltd., in whose laboratory this work was done; to the Department of Scientific and Industrial Research for a grant to one of us from the Building Research Board; and to Messrs. Earle's, Ltd., for supplying a sample of very pure flooring plaster made under works conditions.

TRANSACTIONS

Vol. XLIII., No. 5.] [February 1, 1924.

THE PRESERVATION OF FOOD BY STERILISATION.

BY CLARICE M. DUGDALE.*

The method of preserving food for an indefinite period which is used in all its essentials to-day, was first introduced in 1810, in Paris, by Nicolas Appert, who published his discovery in a communication to the Consulting Bureau of Arts and Manufactures.

This communication has recently been translated in America, and the gist of it cannot be expressed more adequately than in Appert's own words:—"Before entering into the details of the execution of my process, I ought to say that it consists principally:—

(1) To enclose in the bottle or jar the substances that one wishes to preserve.

(2) To cork these vessels with the greatest care because success depends chiefly on the closing.

(3) To submit these substances thus enclosed to the action of boiling water in a water-bath for more or less time according to their nature, and in the manner that I shall indicate for each kind of food."

At that time the current theory of putrefaction was that of spontaneous generation, and Appert explained the success of his method as follows:—"The subject of heat has the essential quality in itself, not only of changing the combination of the constituent parts of animal and vegetable products, but also, if not of destroying, at least of arresting for many years the natural tendency of these same products to decomposition."

The growth of the science of bacteriology in the latter part of the last century gave the clue to the true explanation of the practical success of this process; it was shown that the decomposition of organic materials was due to the action of small extraneous organisms which could be killed by heat. Thus foods heated in carefully sealed containers were freed from these destructive organisms and were protected from the attack of others as long as the seal was perfect.

The problems of food preservation were thus clearly defined as follows:—

(1) To choose a suitable container.

(2) To seal it perfectly.

(3) To heat the whole package so as to destroy the organisms present.

The different types of container and the several methods of sealing them will be considered later in their bearing on the sterilising process required in each case.

The outline of the methods used for sterilisation and the principles involved will first be considered.

The heating of the sealed packages of foodstuffs is usually effected in large metal retorts by steam under pressure; this steam may be supplied from a boiler serving several retorts, or by water contained in the retort itself. Careful comparative experiments made by the staff of the Research Laboratory of the National Canners' Association in America have shown that the same heat process as regards time and temperature has equal sterilisation value whichever type of retort is used.

The problem to be solved is the amount of heat to be supplied to secure the destruction of all the organisms present. The two most important factors in determining this are:—(*a*) The specific resistance to heat of these organisms; (*b*) the rate at which heat is conducted through the mass of the food.

The resistance of bacteria to heat.

Bacteria are divisible into two large groups—those which form spores and those which do not. Non-sporing (*i.e.*, vegetative) forms are usually readily killed at a temperature of about 60° C. The spores of most pathogenic bacteria are killed by boiling for a few minutes. Until recent years little more than this was known about the resisting power of bacteria.

In 1910 Miss Chick[1] published the results of certain investigations of the rate of destruction of bacteria in the vegetative form by heat and disinfectants. One of the facts which emerged from her work was that the resisting power of cultures of the same age, from the same strain of bacteria, produced on standardised media under apparently identical conditions, varies very considerably. The cause of this variation is not known. Miss Chick concluded from her work that the destruction of bacteria by hot water takes place in accordance with the logarithmic law of a chemical reaction, in which the individual bacteria behave like the molecules in such reaction, and each has the same resisting power.

Other workers have, however, shown that her figures could be explained on the assumption that the resistance of individuals of a culture varies amongst those individuals in the normal way in which biological characteristics are distributed

* Read at a meeting of the Newcastle Section on Dec. 12, 192[illegible]

[1] J. Hygiene, 1910.

amongst a group, *i.e.*, a large number have a resistance near some mean value, with fewer and fewer of gradually increasing or decreasing resistance. These figures showed also that the mean resistance varies from culture to culture.

The distinct analogy between the destruction of organisms by heat and the coagulation of their proteins has led to the conclusion that this destruction is a chemical reaction, involving changes in the chemical constituents of the proteins present and having a very high temperature coefficient, so that at some temperature it appears to take place instantaneously. (This, of course, is a very different thing from assuming that the bacteria themselves behave like uniform molecules.)

A comprehensive study has recently been made in America by Meyer and his co-workers,[2] on the heat-resisting properties of *B. botulinus*. The method used was to seal up a spore suspension in a hard glass tube and immerse this tube in an oil-bath, electrically controlled at the desired temperature. At a given time the tube was withdrawn, cooled and opened, and sub-cultures were made on suitable media. These were incubated and examined from time to time for evidence of germination

All results gained in this way are strictly comparable, but, as was pointed out by one worker, considerable radiation of heat takes place from the glass walls of the tube, and a definite time elapses before the spore suspension itself reaches the temperature of the bath. At 120° C. this time was stated to be 30 min. The actual heat-resistance of the spores is therefore rather less than would appear from these experiments.

The results of this work may be summarised as follows :—

(1) The maximum heat-resistance of spores of different strains of *Bacillus botulinus* may, under exactly similar conditions, exhibit enormous variations; *e.g.*, 78 strains of type (*a*) were examined and the resistance at 105° C. was found to vary from 3 min. to 80 min.

(2) Spores of the same strain showed marked variation in their powers of resistance. This made comparative determinations of the resistance under different conditions impossible, as the effect of the changed conditions could not be distinguished from the normal variations. It was, however, found that the drying of the spores under carefully standardised conditions left them with constant though slightly reduced resistance. The study of the effect of certain reagents could then be carried out on dried spores. In this way it was found that :—

(3) The resistance is greater in a neutral medium. With increase or decrease of the hydrogen-ion concentration the resistance falls off.

(4) For a given spore suspension, the resistance varies with the concentration.

(5) In a medium containing amino-acids but no other soluble nitrogen compounds, the spores exhibited relatively low resistance.

(6) The resistance in the juices of certain canned foods remained almost constant despite a very considerable difference in hydrogen-ion concentration of the juices.

In addition Meyer found that young moist spores are the most resistant; they can be kept for a few days at 0° C. without losing their resisting power, but cannot be so kept at 20° or 37° C. Dried spores retain their resistance when kept at 0°, 20°, or 37° C.

The germination of spores may be delayed for a long time without the spore necessarily being killed; *e.g.*, *B. botulinus* has been known to germinate after a year's incubation at 37° C.

The media and conditions most favourable to the production of resistant spores were studied, and then the resistance of a large number of suspensions was determined under the conditions most favourable to resistance.

The maximum survival times of *B. botulinus* and two other anaerobes as found by Meyer are as follows :—

Temperature, ° C.	Time (minutes) *B. botulinus.*	*B. sporogene*	*B. tetani.*
120	4	—	—
115	10	—	—
110	33	12	—
105	100	45	25
100	330	150	90

These show that *B. botulinus* in its most resistant forms is markedly more resistant than the other common anaerobes.

The sterilising process used for any food must be based principally on the maximum heat-resistance of the organisms which may be present.

Bacterial contamination.—Owing to the widesprea distribution in nature of bacteria of different kinds, it is impossible to prevent some organisms from gaining access to foods, particularly in transit, however careful and adequate may be the covering of the foods. Moreover, fruits and vegetables have been found in perfectly fresh condition to carry on their surfaces soil organisms, which are not removed by washing. The number of bacteria present in food before the sterilising process may, however, be minimised by attention to strictly sanitary conditions in transit and preparation, and to the reduction, as far as practicable, of the length of the preliminary steps in manufacturing or packing. It is particularly desirable that cooling processes, where necessary at all, should be carried out as quickly as possible.

It has been found, however, that a few very highly resistant spores may be produced in very young cultures of certain organisms, and the strictest regard to sanitation cannot entirely preclude the occasional access to food of various types of spoilage-producing bacteria.

The following study of the conditions affecting the sterilisation of preserved foods was undertaken with a view to determine the steps necessary to eliminate trouble from such accidental sources.

Much more needs to be known about the distribution in nature and the resistance to heat of non-pathogenic organisms, which are mainly the cause of spoilage in preserved foods. In this connexion the following experiments made by the author on the resistance of certain sporing aerobes may be described.

[2] J. Infect. Diseases, [illegible]

In empirical tests on the sterilisation of food mixtures it was noticed that a group of sporing, aerobic organisms frequently survived what seemed a very severe heating, and it appeared to be desirable to determine their distribution, the degree of resistance to heat normally exhibited, and what would be their action if allowed to develop in the foods.

They were, therefore, carefully isolated and their cultural characteristics examined. A bacteriological study of various foodstuffs was also made. This showed the organisms to be widely distributed in foods, particularly cereals, as normally offered for sale.

The chief characteristics of the group are as follows:—

Type.	α	β	γ	δ	η	θ
Shape	Bacillus	Bacillus	Bacillus	Bacillus (usually in long massive chains)	Bacillus	Bacillus
Gram	Negative	Negative	Negative	Negative	Negative	Negative
Spores	Central and oval	Central and flat	Central and oval	Central and oval; very large	Central	Terminal and round
Broth culture	Cloudy—soft pellicle formed	Thick tenacious ridged pellicle	No pellicle—liquid cloudy and sediment formed	Cloudy—heavy sediment	Soft film	Cloudy—no film
Agar slope	Soft white film—slight ridges—non-tenacious	Much ridged, very tenacious. Yellowish film. Removed from agar with great difficulty	Soft smooth white glistening film	Thick white growth. Soft and non-tenacious	Yellowish film, in appearance like β but non-adhesive	Soft, brownish-white growth
Potato	White, soft, much-ridged — non-tenacious film	Pinkish ridged film — closely adherent to surface of potato	Soft smooth moist white growth	Thick white soft film	Yellowish white moist film. In a few days potato becomes vacuolated and alcoholic smell is noticed	
Milk	Alkaline and peptonised	Alkaline and peptonised	Alkaline and peptonised	Alkaline and peptonised	Acid and clot	Alkaline and peptonised
Gelatin stab	Rapid liquefaction	Rapid liquefaction	Rapid liquefaction	Rapid liquefaction	—	Rapid liquefaction
Egg-meat broth	Egg white rapidly digested. No odour	Egg white rapidly digested. No odour	Egg white slowly digested. No odour	Egg white fairly rapidly digested. No odour	—	Egg white digested. Slight putrid odour
Sugar-media: Glucose	Acid but no gas	Acid but no gas	Acid but no gas	Acid but no gas	No acid or gas	No acid or gas
Lactose	No acid or gas	No acid or gas	No acid or gas	No acid or gas	Acid and slight gas	No acid or gas
Sucrose	Faint acid, no gas	Marked acid, no gas	No acid or gas	Acid but no gas	—	No acid or gas
Mannitol	No acid or gas	Faint acid, no gas	No acid or gas	No acid or gas	—	No acid or gas

The most important of these characteristics are the almost complete absence of fermentation on carbohydrate media and the definite though varying proteolytic action of all the members of the group. The last one is noticeably different from the others; it was isolated only from a mixture of foodstuffs and was never definitely traced to its origin. It has terminal spores, and produces a slight putrefactive odour on milk and egg-meat broth. It was thought that it might really be an anaerobe with unusual stability in the presence of oxygen, but it was not successfully grown under anaerobic conditions. On the other hand, two of the aerobes, α and β, could be readily grown under the degree of anaerobiosis normally produced in a Buchner tube.

The different organisms were inoculated on to jars of meat which were then sealed as usual, incubated, and examined after some weeks. In each case the organism was recovered, and changes in the meat had definitely taken place, though the nature of these changes was not investigated. There was no objectionable odour or taste to be noticed, but the meat had entirely lost its characteristic meat flavour, and had deteriorated markedly. No marked change in the reaction of the meat was noticeable.

It may be mentioned here that one of the most satisfactory methods of closure for glass jars is the "Phœnix cap" method, in which the cap is clamped tightly on to the jar by a mechanical device, the seal being made air-tight by a rubber ring between the lid and the jar. This leaves a layer of air on the top of the jar which is evidently sufficient to permit of the development of these aerobic organisms. It is necessary, therefore, to use a sterilising process adequate to destroy these, if spoilage is to be prevented.

Some knowledge of the resisting power of the organisms was therefore desirable. From preliminary tests on their resistance in foodstuffs it was concluded that three of them, α, β, and γ, were more resistant than the others, and about as resistant as each other.

The tests were made on ordinary nutrient broth cultures for convenience in detecting growth and also because it seemed that such broth was fairly similar in essentials to the foodstuffs under consideration. The heating of the cultures at 100° C. was effected in the steamer; at higher temperatures, the experiments were made in the autoclave, the time taken after closing the autoclave before reaching the desired temperature, and the time taken to "blow off" the pressure before opening up, being in each case carefully noted and controlled.

The tests were mainly made on one type of organism (β) and fall into three groups:—

(1) Tests made on 16-hr. old cultures to determine the approximate resistance of young cultures, as under normal conditions of preparation of food for preservation by heat, the time in which development of the organism is possible would be limited to a few hours.

(2) Tests on 24-hr. old cultures in which a pellicle had formed definitely, and a large number of spores were present.

(3) Tests on 10—14-day old cultures in which no vegetative forms were found.

Tests at 100° *C.*—A large number of experiments may be summarised as follows:—The maximum heat-resistance found for a 16-hr. old culture at 100° C. was 55 min. It was noticeable that in this

particular series, apparently identical cultures showed no growth in three weeks after heating for 5, 10, 15, and 20 min. respectively, and yet cultures heated for 55 min. grew out in two days. This showed the production of a few fairly resistant spores in quite young cultures; these resistant spores happened to be located in the tubes heated for 55 min.

In the examination of about 70 cultures of 1 day's growth, the maximum heating at 100° C. after which growth occurred was 1½ hr., with growth delayed for at least 3 weeks.

When older cultures (10–14 days old) were studied, a considerable number survived heating for 3 hr.; several survived 4 hr. and one survived 6 hr. The last grew out in less than a week; some of the others only grew out in from two to three months. These older cultures therefore showed a definitely higher resistance than the younger ones, probably because the increased spore-formation increased the chance of the production of some highly resistant spores.

At higher temperatures the following resistances have been noted: –5 min. at 115°; 20 min. at 108°; 35 min. at 107°; 45 min. at 105° C. Many more tests would be necessary to determine the actual maximum resistance of these spores at these temperatures.

The time required to raise the autoclave to the desired temperature was usually 4 min., and the time to drop to 100° C. was 3 min. A broth culture immersed in boiling water was found to attain a temperature of 100° C. in about 4 min. The above processes probably, therefore, represent very nearly the actual temperatures which the cultures themselves reached. The autoclave method has, however, many obvious disadvantages and could not be used where standardised conditions were desired for comparative studies. It suffices, however, to give much information for practical purposes.

In the case of the heating of the culture which survived 115° for 5 min., the "getting-up" time of the autoclave was accidentally increased to 10 min.; this, therefore, indicates a very high resistance, particularly as the culture grew out in about eight days.

No attempt has been made to identify these organisms, but they are very similar to some of the sporing organisms which Savage[3] and his co-workers in their investigations of the bacteria of canned meats found fairly commonly occurring in these foods. They show still more marked resemblance to the bacilli found widely distributed in cereals, in the course of an investigation of rope in bread.[4] One of the latter bacilli in broth culture also resisted heating at 100° C. for 6 hr.

Amongst the few facts about the resistance of bacteria to heat that really seem to be established, the variation in this property stands out as most important. In the present state of our ignorance of the causes affecting this, it is necessary to take the maximum resistance that the organism has ever shown as the factor to determine the heating to be given wherever it is desired to destroy the organism with certainty.

As these commonly occurring sporing aerobes described appear to have a maximum resistance of quite the same order as *B. botulinus*, it would seem to be possible to determine from their death or survival after given sterilisation processes the adequacy of that process to destroy all food-poisoning organisms, if the tests are made on a sufficient number of samples.

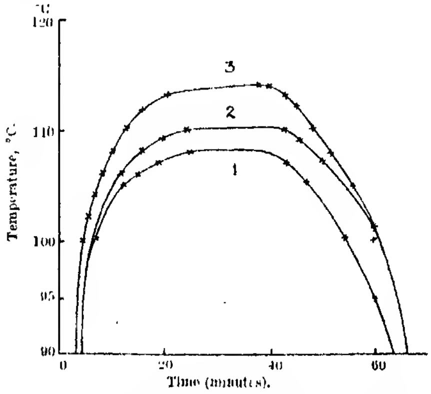
Rate of heat penetration.

The second factor of primary importance in the sterilisation of foodstuffs is the rate at which the heat penetrates to the centre of the food.

This is influenced by the following conditions:—

(1) The size and shape of the container.
(2) The consistency and viscosity of the food.
(3) The specific conductivity of the food.
(4) The temperature at which the retort is maintained.
(5) The initial temperature of the food when the retort process is begun.

The actual temperature of the centre of a package has been studied by a simple device originally designed in slightly different forms by various American workers. These studies have shown that where (as is usually the case) the consistency and viscosity of the food is such as to minimise convection currents, the rate of heat penetration into the centre of the can is very slow. This rate must be determined for each type of package and kind of food.



Curves showing temperature at centre of a given food package when held at (1) 108° C. for 40 mins., (2) 110° C. for 40 mins., (3) 111° C. for 40 mins., and then cooled in air.

The consistency of the food has slight effects, as curves for the same type of food under the same temperature conditions are rarely absolutely identical.

The initial temperature of the food has a marked influence on the time required for the centre of the package to reach its maximum temperature, and this is of the first importance in dealing with certain products, as will be shown later: *e.g.*, it has been found that for a given food-package processed at 110° C., increasing the initial temperature from 20°

[3] "The Bacteriology of Canned Meat and Fish," Savage, Hunwicke, and Calder, 1922.
[4] Jordan, Lloyd, Clark and McCrea, J. Hygiene, 1920-21.

to 40° C. causes the centre of the food to reach 110° C. from 7 to 10 min. earlier. This may increase the efficiency of the whole processing by 20%.

Since it is essential for the sterilisation of food sealed in a container that every portion of the food should receive a given minimum heating, it is necessary in calculating the desired retort process to take the temperature of the centre of the pot as the basis of calculation.

Calculation of the process required to sterilise the food, from the resistance of the organisms and the rate of heat penetration. The rate of destruction of an organism at a given temperature varies with the temperature.

Let this rate of destruction $= f(\tau)$.

(If τ is the temperature at the centre of the food it also varies in a way which is known, with the time t calculated from the beginning of the sterilisation process.)

The destruction at temperature τ in time $dt = f(\tau)dt$, and the total destruction in the whole process $= \int_{t=0}^{t=p} f(\tau)dt$ where p is the total time of the process and the cooling.

Since the equation representing the relationship between the temperature τ and the rate of destruction at that temperature is not known, the value for $\int f(\tau)dt$ cannot be calculated, but it is clearly the area bounded by the curve relating the time to the corresponding rate of destruction.

This curve can be plotted from the resistance curve of the organisms and the heat-penetration curve for the food, if the rate of destruction at any temperature is assumed to be approximately inversely proportional to the length of time required to kill the organism at that temperature. The area of the curve can then be determined mechanically, and this gives the proportion of destruction effected. For complete sterilisation this must at least equal unity.
